Governing Global Networks Mark

W. Zacher, Brent A. Sutton, 1996 *Governing Global Networks* argues that most international regimes are grounded in states mutual cooperation and not in the dictates of the most powerful states. It focuses on the regimes for four important international industries: shipping, air transport, telecommunications, and postal services. Of particular importance to these regimes have been states' interests in both the free flow of commerce and their policy autonomy. The authors examine the relationship between these potentially conflicting goals. In particular, they trace the impact of deregulation, which has led some states increasingly to place gains from economic openness ahead of their desire to maintain a high degree of control of their own economies, and to the decline of the traditional cartel elements of these regimes. This analysis is an important contribution to theoretical debates between neo-realists and neo-liberals in the study of international organisations and international political economy.

Global Governance of Civil Aviation Safety Nilgun Ozgur, 2022-09-30. This book indicates the shortcomings of the current international legal system and customary international norms that govern international aviation law to comply with contemporary air transport market realities. As the air transport market develops globally, the safety regime of civil aviation should also be governed and applied globally. In this book, the author departs from current international legal norms to examine the emerging legal field of global administrative law. Through that lens, the possibility of reconstructing the set of legal mechanisms that govern domestic and international administrative interaction in the global field of aviation safety is explored. This book demonstrates that a legal system is never complete but always develops in tandem with changing needs, i.e. the participation of the affected parties. Exploring the principles of GAL theory contributes to addressing the contemporary legal issues relating to state compliance with international aviation safety standards that would otherwise not be covered by customary international law. In particular, the principles of GAL theory regarding global governance and the public character of global regulations, the role of individuals and states in global governance, and state sovereignty are considered valuable contributions to contemporary global aviation safety issues in practice. It is asserted in this book that proper checks and balances in global aviation safety can be improved by making these accessible to individuals by way of national courts. Finally, establishing public awareness of global aviation safety standards will eventually create greater pressure on states to implement and enforce them. This book is in an area increasing academic and research interest of practitioners of public international aviation law, global administrative law, global governance, and global aviation safety.
