Politics Of Chemical Risk:

The Politics of Chemical Risk: Scenarios for a Regulatory Future R. Bal, Willem Halffman, 2013-04-17 All industrial countries have developed regulatory systems to assess and manage the risk of chemical substances to the working and natural environment The pressure to harmonize these often specialized regulatory systems is increasingly strong at the international level Such harmonization not only entails the assessment of particular chemicals but also the way assessment procedures and their boundary with risk management is organized As these initiatives intensify they increasingly raise important questions of how to integrate national differences in the international regulatory arena How will national consultation procedures relate to international decision making on chemical risks How will differences in national risk assessment procedures be accommodated How will the international regulatory system be integrated with different national styles of regulation and government Presenting the experiences and insights of both people from within the worlds of risk assessment and management and from the field of Science Studies this book forms a state of the art in the discussion on the Politics of Chemical Risk By offering scenarios or sketches of a regulatory future it points to the choices that can be made and the opportunities to be explored As such it offers an agenda for environmental and occupational scientists policy makers and students of science and technology alike

Regulating Chemical Risks Johan Eriksson, Michael Gilek, Christina Rudén, 2010-08-18 This volume presents research on current trends in chemical regulations a fa growing complex and increasingly internationalized field The book grew out from a multidisciplinary research project entitled Regulating Chemical Risks in the Baltic Sea Area Science Politics and the Media led by Michael Gilek at S dert rn University Sweden This research project involved scholars and experts from natural as well as social sciences based at S dert rn University Swedish Royal Institute of Technology KTH Karolinska Institutet and Ume University The project group organized a multidisciplinary research conference on chemical risk regulations held in Stockholm August 15 17 2007 Most of the contributions published in this book were in draft form first presented at this conference The conference like the ensuing edited volume expanded the geographical focus beyond the Baltic Sea area to include wider European and to some extent also global trends Many thanks to all project colleagues and conference participants We are very grateful for the generous financial support received from The Foundation for Baltic and East European Studies stersj stiftelsen The Swedish Research Council Formas and from S dert rn University Without this support the present book would not have been possible Special thanks to all of our fellow contributors all of whom have submitted to cal papers based on high quality research Many thanks also to Tobias Evers who assisted us with technical editing Finally we are grateful for the professionalism shown by our editors at Springer

International Toxic Risk Management Aynsley Kellow, 1999-10-13 This book is concerned with international regulation negotiation and policy making in the environmental realm

Chemical Risk Governance Adam D.K. Abelkop, Lucas Bergkamp, Lynn L. Bergeson , Bethami Auerbach, 2023-03-20 This incisive volume of the Elgar Encyclopedia of Environmental

Law offers a broad analysis of the foundations main concepts and substantive and procedural requirements of selected chemical law regimes as they pertain to the environment Featuring contributions from more than 40 expert scholars and practitioners in the field the volume focuses on chemical regulatory systems from representative jurisdictions including the EU and the US to provide a coherent overview of this expansive and often fragmented area of law Divided into five thematic parts the volume first examines the fundamental concepts of chemical law addressing topics including risk assessment nomenclature environmental justice and animal testing Entries then discuss types of chemicals and exposures regulation of chemicals in products and manufacturing and waste and contamination as well as covering liability rules as they apply to chemicals This volume will be an essential resource for scholars and students looking for a clear understanding of chemicals regulation and governance from environmental and public health perspectives at both national and international levels Its insights into policy developments and liability issues will also be of interest to policymakers and practitioners

Environmental Politics and Policy Walter A. Rosenbaum, 2022-09-22 Walter A Rosenbaum s classic *Environmental Politics and Policy* Twelfth Edition provides definitive coverage of environmental politics and policy lively case material and a balanced assessment of current environmental issues The newly streamlined first half of the book sets needed context and describes the policy process while the second half covers specific environmental issues such as air and water toxic and hazardous substances energy and global policymaking on issues like climate change and trans boundary politics The Twelfth Edition includes updated case studies and a look at the transition in environmental policies between the Trump and Biden administrations offering students a current and relevant look at the continuing challenge of reconciling sound science with practical politics

Controlling Chemicals Ronald Brickman, Sheila Jasanoff, Thomas Ilgen, 1985 *Toxic Sexual Politics* Melina Packer, 2025-01-28 A bold expos of how the very foundation of toxicology has been contaminated by sexist and racist ideologies The first critical understanding of the field of toxicology from a feminist and antiracist perspective *Toxic Sexual Politics* asserts that the science of toxicants must be held accountable for the uneven distribution of toxic pollution along racial and sexual lines Drawing upon in depth interviews and extensive ethnographic and archival research including participant observations in toxicology classrooms conferences and laboratories Melina Packer urges environmental health advocates to place toxicant science within its masculinist militarist and eugenicist history *Toxic Sexual Politics* shows how the founding fathers of U S toxicology were ideologically aligned with the chemical industry inventing a science that could make chemicals safe as opposed to one that could adequately protect planetary health from toxicants hazards While many toxicologists today are critical of the chemical industry they continue to rely on the highly limited tools of toxicology as accurate measures of toxicity as do government regulators the courts and environmental advocates Unlike most critiques of the chemical industry and narratives of environmental health movements *Toxic Sexual Politics* refuses to take the science at face value By focusing on the sexist racist and ableist biases reinforced by toxicology Packer powerfully argues that this

scientific discipline reproduces the very same white supremacist and heterosexist logics that generated environmental injustices in the first place The field of toxicology can explicitly confront chemical corporate power by building from queer feminist anti ableist and antiracist movements for environmental and reproductive justice The Subjectivities and Politics of Occupational Risk Alan Hall,2020-11-29 The Subjectivities and Politics of Occupational Risk links restructuring in three industries to shifts in risk subjectivities and politics both within workplaces and within the safety management and regulative spheres often leading to conflict and changes in law political discourses and management approaches The state and corporate governance emphasis on worker participation and worker rights internal responsibility and self regulative technologies are understood as corporate and state efforts to reconstruct control and responsibility for Occupational Health and Safety OHS risks within the context of a globalized neoliberal economy Part 1 presents a conceptual framework for understanding the subjective bases of worker responses to health and safety hazards using Bourdieu s concept of habitus and the sociology of risk concepts of trust and uncertainty Part 2 demonstrates the restructuring arguments using three different industry case studies of multiple mines farms and auto parts plants The final chapter draws out the implications of the evidence and theory for social change and presents several recommendations for a more worker centred politics of health and safety The book will appeal to social scientists interested in health and safety work employment relations and labour law as well as worker advocates and activists **Governmental Management of Chemical Risk** Rae Zimmerman,1990-04-05 Well documented organized and written for ready comprehension this new book covers managerial legal and financial strategies that are or can be employed to manage the health risks posed by technology It demonstrates how each strategy is used and which ones are more valuable to decision makers in different situations More than a dozen laws are reviewed through the legislative process providing a clear understanding of governmental processes for risk management Non regulatory and regulatory approaches to risk management are covered from both a theoretical and practical perspective New financial instruments that reduce or prevent consequences of chemical risks are examined Serves a dual purpose GOVERNMENTAL MANAGEMENT of CHEMICAL RISK first provides a comprehensive coverage of components of risk management second it analyzes through case studies emerging patterns of use of risk management techniques to determine what makes a success or failure This book deals with The Law and Politics of Sustainability Klaus Bosselmann,Daniel S. Fogel,J.B. Ruhl,Patricia Wouters,2010-11-30 The Law and Politics of Sustainability explores efforts made to address pressing environmental concerns through legislation conventions directives treaties and protocols Articles explain the mechanics of environmental law the concepts that shape sustainable development case studies and rulings that have set precedents approaches to sustainable development taken by legal systems around the world and more Experts and scholars in the field raise provocative questions about the effectiveness of international law versus national law in protecting the environment and about the effect of current laws on future generations They analyze the successes and shortcomings of present legal

instruments corporate and public policies social movements and conceptual strategies offering readers a preview of the steps necessary to develop laws and policies that will promote genuine sustainability

The Politics of Precaution David Vogel, 2012-04-29 The Politics of Precaution examines the politics of consumer and environmental risk regulation in the United States and Europe over the last five decades explaining why America and Europe have often regulated a wide range of similar risks differently It finds that between 1960 and 1990 American health safety and environmental regulations were more stringent risk averse comprehensive and innovative than those adopted in Europe But since around 1990 the book shows global regulatory leadership has shifted to Europe What explains this striking reversal David Vogel takes an in depth comparative look at European and American policies toward a range of consumer and environmental risks including vehicle air pollution ozone depletion climate change beef and milk hormones genetically modified agriculture antibiotics in animal feed pesticides cosmetic safety and hazardous substances in electronic products He traces how concerns over such risks and pressure on political leaders to do something about them have risen among the European public but declined among Americans Vogel explores how policymakers in Europe have grown supportive of more stringent regulations while those in the United States have become sharply polarized along partisan lines And as European policymakers have grown more willing to regulate risks on precautionary grounds increasingly skeptical American policymakers have called for higher levels of scientific certainty before imposing additional regulatory controls on business

Risk Journalism between

Transnational Politics and Climate Change Ingrid Volkmer, Kasim Sharif, 2018-04-06 This book introduces a new methodology to assess the way in which journalists today operate within a new sphere of communicative public interdependence across global digital communities by focusing on climate change debates The authors propose a framework of cosmopolitan loops which addresses three major transformations in journalistic practice the availability of fluid webs of data which situate journalistic practice in a transnational arena the increased involvement of journalists from developing countries in a transnationally interdependent sphere and the increased awareness of a larger interconnected globalized risk dimension of even local issues which shapes a new sphere of news horizons The authors draw on interviews with journalists to demonstrate that the construction of climate change issues is increasingly situated in an emerging dimension of journalistic interconnectivity with climate actors across local global and digital arenas and through physical and digital spaces of flows

Assessments of Regional and Global Environmental Risks Alexander E. Farrell, Jill Professor

Jäger, 2010-09-30 As environmental challenges grow larger in scale and implications it is increasingly important to apply the best scientific knowledge in the decisionmaking process Editors Farrell and Jäger present environmental assessments as the bridge between the expert knowledge of scientists and engineers on the one hand and decisionmakers on the other When done well assessments have a positive impact on public policy the strategic decisions of private firms and ultimately the quality of life for many people This book is the result of an international interdisciplinary research project to analyze past

environmental assessments and understand how their design influenced their effectiveness in bringing scientific evidence and insight into the decisionmaking process The case studies in the book feature a wide range of regional and global risks including ozone depletion transboundary air pollution and climate change Assessments of Regional and Global Environmental Risks offers several important contributions It provides a clear account of the choices faced in the design of environmental assessments and a clear description of the lessons learned from past assessments It illustrates why assessments are social processes not simply reports And while they identify no universal one size fits all design the authors find that to be effective environmental assessments must be viewed by those who produce and use them as being salient credible in their scientific support and legitimate or fair in design and execution

Transparency and Accountability in Science and Politics

K. Andersson, 2008-07-10 This book challenges the role of scientists in policy making and the idea of deliberative democracy The author argues that awareness must increase among both politicians and the citizens who elect them We must revitalise the decision making processes in representative democracy The book proposes new institutional structures

Water Governance: Retheorizing Politics Nicole J. Wilson, Joanne Nelson, Sameer H. Shah, Leila M. Harris, 2019-10-11 This republished Special Issue highlights recent and emergent concepts and approaches to water governance that re centers the political in relation to water related decision making use and management To do so at once is to focus on diverse ontologies meanings and values of water and related contestations regarding its use or its importance for livelihoods identity or place making Building on insights from science and technology studies feminist and postcolonial approaches we engage broadly with the ways that water related decision making is often depoliticized and evacuated of political content or meaning and to what effect Key themes that emerged from the contributions include the politics of water infrastructure and insecurity participatory politics and multi scalar governance dynamics politics related to emergent technologies of water bottled or packaged water and water desalination and Indigenous water governance

The Oxford Handbook of Contextual Political Analysis Robert E. Goodin, Charles Tilly, 2008-06-20 The Oxford Handbooks of Political Science is a ten volume set of reference books offering authoritative and engaging critical overviews of the state of political science Each volume focuses on a particular part of the discipline with volumes on Public Policy Political Theory Political Economy Contextual Political Analysis Comparative Politics International Relations Law and Politics Political Behavior Political Institutions and Political Methodology The project as a whole is under the General Editorship of Robert E Goodin with each volume being edited by a distinguished international group of specialists in their respective fields The books set out not just to report on the discipline but to shape it The series will be an indispensable point of reference for anyone working in political science and adjacent disciplines The Oxford Handbook of Contextual Political Analysis sets out to synthesize and critique for the first time those approaches to political science that offer a more fine grained qualitative analysis of the political world The work in the volume has a common aim in being sensitive to the thoughts of contextual nuances that disappear from large scale

quantitative modelling or explanations based on abstract general universal laws of human behavior It shows that context matters in a great many ways philosophical context matters psychological context matters cultural and historical contexts matter place population and technology all matter By showcasing scholars who specialize in the analysis of all these contexts side by side the Oxford Handbook of Contextual Political Analysis shows how political scientists can take those crucial contextual factors systematically into account *Rescuing Science from Politics* Wendy Elizabeth Wagner, Rena Steinzor, 2006-07-24 This book examines how dominant interest groups manipulate the available science to support their positions Calculating Risks? James Hamilton, W. Kip Viscusi, 1999 By matching agency decision data to detailed census information using geographic information systems GIS technology the authors show that most hazardous waste sites do not pose sufficient risk to merit the most stringent cleanup options Those sites that do pose considerable risk to exposed populations often receive inadequate attention because government decisions to target cleanups are based more on political factors than on actual risks The authors propose policy reforms that could significantly reduce cleanup costs without sacrificing the protection of human health BOOK JACKET **Policy Legitimacy, Science and Political Authority** Michael Heazle, John Kane, 2015-10-05 Voters expect their elected representatives to pursue good policy and presume this will be securely founded on the best available knowledge Yet when representatives emphasize their reliance on expert knowledge they seem to defer to people whose authority derives not politically from the sovereign people but from the presumed objective status of their disciplinary bases This book examines the tensions between political authority and expert authority in the formation of public policy in liberal democracies It aims to illustrate and better understand the nature of these tensions rather than to argue specific ways of resolving them The various chapters explore the complexity of interaction between the two forms of authority in different policy domains in order to identify both common elements and differences The policy domains covered include climate geoengineering discourses environmental health biotechnology nuclear power whaling economic management and the use of force This volume will appeal to researchers and to convenors of post graduate courses in the fields of policy studies foreign policy decision making political science environmental studies democratic system studies and science policy studies **The Oxford Handbook of Political Institutions** R. A. W. Rhodes, Sarah A. Binder, Bert A. Rockman, 2008-06-12 The study of political institutions is among the founding pillars of political science With the rise of the new institutionalism the study of institutions has returned to its place in the sun This volume provides a comprehensive survey of where we are in the study of political institutions covering both the traditional concerns of political science with constitutions federalism and bureaucracy and more recent interest in theory and the constructed nature of institutions The Oxford Handbook of Political Institutions draws together a galaxy of distinguished contributors drawn from leading universities across the world Authoritative reviews of the literature and assessments of future research directions will help to set the research agenda for the next decade
