Fundamentals of operations management María Teresa Nogueras Lozano, Eva Ballesté-Morillas, 2024-06-10 We want to welcome you to both an exciting and tactical discipline operations management This manual on Fundamentals of operations management is an effective tool to understand one of the main functions of any organisation the creation of goods and services That is to understand what resources are needed to generate the goods and services of an organisation in a global and highly competitive environment while also incorporating

new technologies In this manual along with the classic fundamentals of operations management we will look forward towards what is coming and how it will impact process improvement in companies The main goal of this book is to equip the reader with the fundamental concepts in operations management To do this it will present the main qualitative and quantitative models for managing operations both in public and private companies As the reader will see the chapters are structured with an easy to follow and rigorous thematic thread that will make each and every step understandable All this book has been designed with a distance learning student or a self taught reader such as an entrepreneur in mind We aim to facilitate the learning of a discipline that for years has been considered complicated and specifically focused on certain professions and to highlight its relevance and future opportunities We strive for the reader to enjoy learning from this manual and to discover an exciting discipline with many career opportunities The book combines both theory and practical exercises with real life cases whose examples will allow the learner to understand the day to day and the myriad of challenges and opportunities faced by operations management The manual covers classic management topics such as process design inventories demand forecasting etc as well as newer concepts such as digitisation of the supply chain As for the way the content is conveyed we have opted for a simple language that facilitates understanding while also being rigorous and precise The methodology used is distance learning which means that this manual is mainly intended for self learning and consequently its structure is designed to promote the understanding of its contents To achieve this goal 1 The text is divided into eight chapters that present a logical and coherent sequence to understanding what operations management consists of Chapter I Operations in the Current Environment defines what operations are in a company teaching the reader about the evolution of this discipline in a global environment The chapter shows the importance of the company s competitiveness generators and explains key concepts such as the value chain the extended network and digitisation which are crucial in current production processes and serve as an introduction to other concepts that will be explained in further detail in the following chapters which are aimed to teaching how to achieve a right tactical decision making in operations management Chapter II Managing Operations addresses the main topics in the day to day of operations management in order to get the reader in the context of the type of decisions that must be made in matters related to the supply chain inventory management costs planning the necessary materials project management among others and understand the implications of such decisions in the proper functioning of the company After having defined what operations are Chapter I and the types of decisions that need to be made for a successful operation Chapter II Chapter III Tools to Support Decision Making in Operations aims to provide the necessary tools to support decision making in two main categories quantitative and qualitative techniques Quantitative techniques include decision trees linear programming transportation modelling queuing models learning curves simulations and sales forecasting On the other hand qualitative techniques include concepts such as judgment based on experience customer surveys and the Delphi method By understanding these techniques readers will be able to delve into key concepts

in the following chapters in order to properly plan resources to respond to anticipated demand while avoiding cost overruns and waste and aligning with the company's production capacity Chapter IV Aggregate Planning addresses medium term production planning which typically spans between 6 and 18 months Its main objective is to meet demand which requires determining the production quantity inventory levels and the amount of work or labour force needed by the company whether in house or outsourced To achieve this it is necessary to develop an Aggregate Production Plan which is essential for an efficient production As determining the inventory level is one of the key factors in Aggregate Planning this manual devotes two chapters to inventory management Chapter V Inventory Management Independent Demand and Chapter VI Inventory Management Dependant Demand In both chapters inventory management and being able to determine the optimal quantity of supplies that should be ordered are critical factors for the company's costs and productivity Therefore calculating the optimal order quantity is the central focus of both chapters The decision to divide inventory management into two chapters is mainly due to the methods used to determine the optimal order quantities which differ for materials with dependent and independent demand For the latter case classic or traditional methods Chapter V are not valid initial assumptions change and more complex systems such as MRP Material Requirements Planning studied in Chapter VI of this manual are required In addition inventory management has become a critical factor for a company's competitiveness in today's globalized world The emergence of philosophies or approaches that practically eliminate inventory such as the Just In Time JIT or Lean Manufacturing systems cannot be overlooked so they have their space in Chapter VI Chapter VII Operational Scheduling constitutes the final link in operations management Operational scheduling or short term planning translates medium to long term plans into short term decisions aimed at allocating human resources machines and materials in the workplace to plan the most optimal work sequence possible In short it translates the Master Production Schedule Chapter IV and MRP Chapter VI into work sequences and specific assignments of people materials and machines to the work centres Usually assignments are made on a weekly daily and even hourly basis The last chapter Chapter VIII Quality in the Age of Planned Obsolescence tackles the concept of quality from the perspective of operations management and how it has evolved towards process improvement theories while addressing the phenomenon of planned obsolescence waste generation and the ethical commitment of operations management to preserve the environment 2 Each chapter is structured as follows The title that identifies it A descriptive content section of its main sections The educational goals to be achieved after studying it Keywords An outline that orderly structures the content A summary that presents the most important contents and ideas of the chapter The text itself is complemented by graphics examples diagrams and practical situations that occur in our business reality and highlight the application of theoretical concepts Glossary of terms A series of self assessment questionnaires for every chapter that aims to evaluate the reader's degree of understanding of its contents in the online portion of the manual Recommended readings in the online portion of the manual to reinforce the contents learned through articles manuals or a

combination of both that will allow the reader to establish their learning of all the key issues. Some chapters are also reinforced with videos found on the Internet that contain practical application cases of the studied contents. As can be seen, this book concludes with an extensive bibliography made up of manuals related to Operations Management. Finally, it is our wish that the reader enjoys the manual and that it opens the doors to new and interesting opportunities for them.

Understanding Supply Chains : Concepts, Critiques, and Futures Steve New, Roy Westbrook, 2004-09-23 Operations Research in Production Planning and Control Günter Fandel, Thomas Gullledge, Albert Jones, 2012-12-06
This proceedings volume contains selected and refereed contributions that were presented at the conference on Recent Developments and New Perspectives of Operations Research in the Area of Production Planning and Control in Hagen, Germany, 25-26 June 1992. This conference was organized with the cooperation of the Fernuniversität Hagen and was jointly hosted by the Deutsche Gesellschaft für Operations Research (DGOR) and the Manufacturing Special Interest Group of the Operations Research Society of America (ORSA SIGMA). For the organization of the conference, we received generous financial support from the sponsors listed at the end of this volume. We wish to express our appreciation to all supporters for their contributions. This conference was the successor of the JOINT ORSA/DGOR conference in Gaithersburg, Maryland, USA, on the 30 and 31 July 1991. Both OR societies committed themselves in 1989 to host joint conferences on special topics of interest from the field of operations research. This goal has been

successfully realized in the area of production management and it should be an incentive to conduct similar joint conferences on other topics of operations research in the years to come The 36 contributions in this proceedings volume deal with general and special problems in production planning as well as approaches and algorithms for their solution They cover a wide range of operations research within product management and will therefore address a wide circle of interested readers among OR scientists and professionals alike

Achieving Competitive Edge David Bennett, Colin Lewis, 2012-12-06 There is now a widely accepted view among manufacturing and service organisations that operations can provide the means of achieving competitive edge The OMA UK Sixth International Conference has taken this view as its theme and focuses in particular on how technology and people can be used to improve manufacturing and service competitiveness These proceedings have been organised according to the topics addressed within the overall conference theme and generally fall within three broad areas technology based topics human resource based topics and general topics The technology based topics are Materials Control Supply Chain Management and Logistics Flexibility in Operations Systems Computer Aided Management of Operations Design Process Planning and Time to Market Factors Application of KBS Expert Systems and Modelling Production Planning and Control The human resource based topics are Work Organisation Human Factors Managing the Implementation of Technology Managing the Quality Improvement Process Education Training and Development Employee Participation and Involvement The general topics are Operations Strategy International Comparisons and Country based Papers Performance and Productivity Measurement and Improvement A particular feature of all the papers is that they emphasise the application of techniques technologies and concepts rather than concentrating on specific functional description The authors are drawn from around 14 countries and represent both the academic and industrial communities Many are involved in the mainstream of operations management while a number are from other disciplines relevant to the conference theme such as industrial engineering and organisational behaviour

CAD/CAM Robotics and Factories of the Future Birendra Prasad, 2012-12-06 This volume is about automation automation in design automation in manufacturing and automation in production Automation is essential for increased productivity of quality products at reduced costs That even partial or piecemeal automation of a production facility can deliver dramatic improvements in productivity has been amply demonstrated in many a real life situation Hence currently great efforts are being devoted to research and development of general as well special methodologies of and tools for automation This volume reports on some of these methodologies and tools In general terms methodologies for automation can be divided into two groups There are situations where a process whether open loop or closed loop is fairly clearly understood In such a situation it is possible to create a mathematical model and to prescribe a mathematical procedure to optimize the output If such mathematical models and procedures are computationally tractable we call the corresponding automation algorithmic or parametric programming There is however a second set of situations which include processes that

are not well understood and the available mathematical models are only approximate and discrete While there are others for which mathematical procedures are so complex and disjoint that they are computationally intractable These are the situations for which heuristics are quite suitable for automation We choose to call such automation knowledge based automation or heuristic programming *Modern Logistics Management* John F. Magee, William C. Copacino, Donald B. Rosenfield, 1985-10-02 This comprehensive overview of logistics provides a conceptual framework for understanding the logistics system the integration of its basic elements and its relationship to the overall firm Discusses both manufacturing and physical distribution new technologies in each of these areas and how they related to each other and to the company New topics covered range from approaches to strategic logistics planning and multi location inventory planning to international logistics issues and future directions Includes case studies **Optimal Plant Layout Design for Process-focused Systems** M. Khoshnevisan , Sukanto Bhattacharya , Florentin Smarandache , In this paper we have proposed a semi heuristic optimization algorithm for designing optimal plant layouts in process focused manufacturing service facilities Our proposed algorithm marries the well known CRAFT Computerized Relative Allocation of Facilities Technique with the Hungarian assignment algorithm *Organizational Innovation* Gerald Hage, 2018-12-20 Published in 1998 In the past year the 300 largest global companies increased their research budgets by an average of 12 per cent Governments now measure how technologically advanced they are as they worry about their trade balances and unemployment Many public sector organizations for example hospitals universities and welfare agencies are struggling to keep up with the rate of technological progress The selections in this book provide a number of insights on how private firms can be more innovative and public sector organizations can keep up with rapid technological change They emphasize both radical and incremental innovations and both product and process innovation In particular the advanced manufacturing technologies so central to Piore and Sabel s Second Industrial Divide receive a great deal of attention Finally the consequences of innovation are the focus of the last section **Production/operations Management** Thomas E.
