Choosing and Using a New CAT Rod Mollise, 2009-02-28 Choosing and Using the New CAT will supersede the author's successful *Choosing and Using a Schmidt Cassegrain Telescope* which has enjoyed enthusiastic support from the amateur astronomy community for the past seven years. Since the first book was published a lot has changed in the technology of amateur astronomy. The sophistication and variety of the telescopes available to amateurs has increased dramatically. Computerized SCTs, Maksutov Cassegrains and most recently Meade's new and acclaimed Ritchey Chr tiens have come to dominate the market. That means that all amateurs considering the purchase of a new telescope not only a SCT and not just beginners will benefit from this detailed guide. Choosing the right telescope for particular kinds of observation or even for general work is far from easy but Rod Mollise gives invaluable advice and guidance.

A History of Modern Planetary Physics Stephen G. Brush, 1996-04-26. Where did we come from? Before there was life there had to be something to live on: a planet, a solar system. During the past 200 years astronomers and geologists have developed and tested several different theories about the origin of the solar system and the nature of the Earth. Together the three volumes that make up *A History of Modern Planetary Physics* present a survey of these theories. The early twentieth century saw the replacement of the Nebular Hypothesis with the Chamberlain Moulton theory that the solar system resulted from the encounter of the Sun with a passing star. Fruitful Encounters follows the eventual refutation of the encounter theory and the subsequent revival of a modernised Nebular Hypothesis. Professor Brush also discusses the role of findings from the Apollo space programme especially the analysis of lunar samples culminating in the establishment in the 1980s of the giant impact theory of the Moon's origin.
