## **Lung Development And Regeneration:**

Lung Development and Regeneration Donald J. Massaro, Gloria DeCarlo Massaro, Pierre Chambon, 2004-09-09 This reference compiles the most current technical and biological data available to survey the state of science in the care and management of patients with bronchopulmonary dysplasia COPD and other forms of lung disease tracking the initiation and progression of processes that cause airway obstruction the biologic and physiological abnormalities *Stem Cells in the Lung* Ivan Bertoncello, 2015-10-31 This book presents a comprehensive overview of the current understanding of the organization of endogenous lung stem and progenitor cell compartments during fetal lung development postnatal lung growth and in adulthood Progressing stage by stage the chapters on fetal lung development emphasize the integrated role of epithelial stromal vascular and neural cell elements in building a functional lung while the subsequent chapters on adult lung regeneration describe the nature and properties of adult lung stem progenitor cells distributed along the proximal distal axis of the airway tree The chapters on regulation of lung regeneration and repair discuss how regenerative cells interact with their niche microenvironment and how regulation of lung regeneration and repair in the steady state and following injury recapitulates ontogeny And lastly the chapters on cellular therapies for lung disease and bioengineering the lung focus on promising emerging therapies and approaches in lung regenerative medicine The scope of this volume of the Stem Cell Biology and Regenerative Medicine series focuses on exploring the topic of building and rebuilding the lung from a cellular rather than a molecular perspective Thus the section on cellular therapies does not include extensive coverage of each of the numerous lung diseases including cancer which could be amenable to stem cell based therapies although the final chapter does include some discussion on the future prospects and challenges All of the contributors are working on the cutting edge of the lung stem cell field making this book essential reading for those with an interest in the field of lung stem cell biology and the potential role of cellular therapies and tissue bioengineering approaches in lung regenerative medicine including biomedical scientists graduate students post graduate researchers and respiratory clinicians **Lung Development** Claude

**Lung Stem Cells in Development, Health and Disease** Nikolic, Marko Z.,Hogan, Brigid L.M.,2021-04-01 Most organs in the adult human body are able to maintain themselves and undergo repair after injury these processes are largely dependent on stem cells In this Monograph the Guest Editors bring together leading authors in the field to provide information about the different classes of stem cells present both in the developing and adult lung where they are found how they function in homeostasis and pathologic conditions the mechanisms that regulate their behaviour and how they may be harnessed for therapeutic purposes The book focuses on stem cells in the mouse and human lung but also includes the ferret as an increasingly important new model organism Chapters also discuss how lung tissue including endogenous stem cells can be generated in vitro from pluripotent stem cell lines This state of the art collection comprehensively covers one of the most exciting areas of respiratory science

**Class I Histone Deacetylases in Lung Development and Regeneration** Yi Wang, 2015 The generation and development of the mammalian lung requires an elegantly regulated molecular program to control cell number lineage specification as well as morphogenetic remodeling Histone deacetylases HDACs are a group of critical epigenetic factors that can mediate genome wide transcriptional repression However the functional roles of HDACs in lung development and regeneration have not been previously characterized In my dissertation I utilized a series of mouse genetic models ex vivo and in vitro assays to determine the functions of three members of class I HDAC family HDAC1 HDAC2 and HDAC3 in lung epithelial development and regeneration These studies reveal that HDAC1 and HDAC2 are redundantly required for the development and regeneration of Sox2 proximal lung endoderm progenitors via regulation of Bmp4 and cell cycle inhibitors while HDAC3 is critical for the alveolar epithelial remodeling and spreading during lung sacculation and alveologenesis These findings demonstrate strong evidence for the crucial contributions of HDACs to lung development and regeneration and provide novel insights into potential therapeutic directions for human lung diseases
