Machine Translation and Translation Theory Omri Asscher, 2025-07-17 Pervasive and ubiquitous machine translation systems have been transforming communication and understanding across languages and cultures on a historical scale Focused on both Neural Machine Translation tools such as Google Translate and generative AI tools such as ChatGPT Omri Asscher pursues the juncture between machine translation and the diverse often competing frameworks of human translation theory He shines a light on the subtleties of the intersection between the two the places where machine translation corresponds well with the ideas that have been developed on human translation throughout the years and the places where machine translation seems to challenge translation theory and perhaps even require that we rethink some of its basic assumptions Machine Translation and Translation Theory reflects the need for an accessible panoramic view on the subject It offers a detailed discussion of various points of theoretical interest definitions of translation equivalence in translation aesthetics of translation translation ethics translation as cross cultural communication and translation s historical agency This is key reading for researchers and students in translation studies as well as scholars of AI mediated communication and computer scientists interested in how machine translation architectures correspond with the understanding of translation in the humanities

The Possibility of Language Alan K. Melby, Terry Warner, 1995-12-08 This book is about the limits of machine translation It is widely recognized that machine translation systems do much better on domain specific controlled language texts domain texts for short than on dynamic general language texts general texts for short The authors explore this general domain distinction and come to some uncommon conclusions about the nature of language Domain language is claimed to be made possible by general language while general language is claimed to be made possible by the ethical dimensions of relationships Domain language is unharmed by the constraints of objectivism while general language is suffocated by those constraints Along the way to these conclusions visits are made to Descartes and Saussure to Chomsky and Lakoff to Wittgenstein and Levinas From these conclusions consequences are drawn for machine translation and translator tools for linguistic theory and translation theory The title of the book does not question whether language is possible it asks with wonder and awe why communication through language is possible
