Cyberware Matthew E. Gladden, 2017-08-20 You don't know how far you can trust what you see or feel or remember because it could all just be a byproduct of your neural implant or illusions fabricated by a neurohacker Self evolving computer viruses and stray nanorobotic swarms have taken up residence in the components of your robotic prosthetic arm Battles over access to neurocybernetic enhancement life extension biotech and immersive VR paradises are fragmenting humanity into new strata of haves and have nots You can never tell whether the full body cyborgs that you see in the street belong to military units megacorps or bands of hackers for hire or maybe all three at once Such near future cyberdystopias provide the perfect setting for a hard SF roleplaying game campaign But how much reality lies beneath their surface Could a human mind really learn how to operate a full cyborg body that has wheels or wings or dozens of robotic tentacles or would it be too alien If relatively small changes in brain temperature can cause behavioral impacts or even brain damage is it advisable to implant a heat spewing miniaturized supercomputer in someone's cranium A neural jack that lets you instantly download new skills sounds great but could such a thing actually work And which of your cognitive functions could a hacker take control of by compromising such a device If you've ever thought about any of these questions when designing or running an adventure then Mnemoclave's Posthuman Cyberware Sourcebook series is meant for you It's designed especially for GMs who want to give their campaigns a grittier edge and loads of surprises that'll keep their players on their toes and for serious gamers who want to map out the potential and limitations of their characters cyberware from a new perspective This first volume in the series offers an introduction to the use of neuroprostheses for sensory cognitive and motor enhancement and explores distinctions between posthuman and transhuman cyberware It's not simply a tale of artificial eyes with telescopic night vision or combat grade cyberlimbs but also a blueprint for the development of neuroprosthethically enhanced imagination emotions and conscience and the creation of human synthetic hive minds The volume considers neuroprosthetic devices human hosts in their three roles as sapient minds embodied organisms and social and economic actors to explain how cyberware can be employed either as tools for personal empowerment and liberation or mechanisms of enslavement and zombification The book serves as a resource for designing campaigns or one off adventures set in worlds with a cyberpunk postcyberpunk or biopunk milieu in which posthumanizing cyberware exists and societies are tilting toward the dystopian The text includes dozens of special inserts with plot hooks character traits equipment descriptions and ideas regarding setting and atmosphere

Cyborgization and Virtual Worlds Matthew E. Gladden, 2017-09-05 Whether it's adding a night vision cybereye or acquiring a full cyborg body the process of cyborgization reshapes the way in which an individual relates to the physical environment around her. But how does it transform her ability to dive or to be pulled into virtual worlds? Cyborgization and Virtual Worlds: Portals to Altered Reality is a resource for designing campaigns grounded in near future hard SF settings in which synthetic bodies and VR cyberware offer characters entirely new ways of perceiving, interpreting, and manipulating the analog and digital worlds. It's easy to know when you enter a virtual environment if the tools you're using are a VR headset and haptic feedback gloves. If the virtual experience is too much for you, you can always just rip off the headset; the digital illusions instantly vanish and you know that you're back in the real world. But what if the VR gear that you're employing consists of cranial neural implants that directly stimulate your brain to create artificial sensory experiences? Or what if you're wielding dual purpose artificial eyes and roboprosthesis limbs that can either supply you with authentic sense data from the external environment or switch into iso mode, cut off all sensations from the real world, and pipe fabricated sense data into your brain? What signs could you look for to help you determine whether you're in the real world or just a convincing virtual facsimile? This second volume in Mnemoclave's Posthuman Cyberware Sourcebook series explores the two ways in which neuroprosthetic technologies immerse a cyborg in her environment and allow her to sense and manipulate the world through embodiment and embedding. The process of cyborgization not only grants its human subject an augmented body with enhanced, reduced, or simply different capacities; it also embeds him in a particular part of the real physical world and provides the means by which he senses and manipulates that environment. And it may be the instrument through which he dives into virtual worlds as well. Among the topics explored are: The paths of cyborgization. Different approaches to cyborgization including the creation of full body, partial, extended, sessile, and hollow cyborgs. Differing types of neurocognitive interfaces that can exist between a piece of cyberware and its human host. The extent to which cyberware can be concealed from visual or remote electronic detection. The operational lifespan of cyberware and its potential health impacts on users. Obstacles to characters' acquisition of cyberware including cost, legality, and required maintenance and customization. Problems like neurocoupling, resection syndrome, NRS that affect full body cyborgs and other augmented individuals. Cyberware and virtual worlds. Distinctions between virtual, augmented, and refracted reality. The mechanics by which cyborg characters can recognize and adjust to transitions between the real and virtual worlds. The use of digital avatars as cyberdoubles or cybermorphs within virtual worlds. Plot impacts of cyborg characters: maximal, partial, temporary, or long term immersion in VR environments. The book is written especially for GMs who are designing adventures or campaigns set in near future worlds with a cyberpunk, postcyberpunk, or biopunk atmosphere in which posthumanizing cyberware exists and societies are tilting ever further toward the dystopian. The text draws extensively on the best contemporary research.

regarding neurocybernetics and the bioengineering economic sociopolitical and cultural aspects of human enhancement to aid GMs who are looking to give their campaigns a hard sci fi edge The volume includes dozens of special textboxes with plot hooks character traits equipment descriptions and ideas for successfully GM ing the ontological puzzles and narrative twists that cyborgization and virtual reality make possible to help you incorporate the material directly into your game regardless of which rule system you re using **Shadowtech Sourcebook** FASA Corporation,Karl Wu,Fasa,1991-09 Personal technology sourcebook Shadowrun **The Sakamota Journals: Sidetracked** Michael J.
