Proteins and Nucleic Acids Abraham Marcus, 2014-05-10 The Biochemistry of Plants A Comprehensive Treatise Volume 6 Proteins and Nucleic Acids provides information pertinent to the nucleic acids and the regulation of the expression of this information This book presents the processes by which the nucleic acids are finally expressed as proteins Organized into 14 chapters this volume begins with an overview of the overall structure of eukaryotic genomes with emphasis on higher plant DNA This text then examines the enzymes involved in the cleavage and degradation of DNA Other chapters provide a critical assessment of eukaryotic nucleic acid polymerases This book discusses as well some examples from plant mitochondrial systems The final chapter deals with two special areas of plant biology where the expression of the nucleic acids is seen in striking relief the formation of plant tumors and the growth and expression of plant viruses This book is a valuable resource for plant biochemists molecular biologists senior graduate students and research workers **Genome and Chromatin:**

Organization, Evolution, Function W. Nagl, V. Hemleben, F. Ehrendorfer, 2012-12-06 At a round table discussion on the eukaryotic chromosome sponsored by the Deutsche Forschungsgemeinschaft in Diisseldorf February 1978 the botanists among the participants felt that plant systems were under represented In this unsatisfactory situation Professor V HEMLEBEN Tiibingen suggested another meeting to discuss actual problems and results concerning botanical chromosome research Professor W NAGL was willing to organize a symposium at the University of Kaiserslautern and Professor F EHRENDORFER Wien contacted the Springer Verlag Vienna New York to explore the possibility of publishing the results of this symposium in the form of a supplement volume to the journal Plant Systematics and Evolution The conference took place on 13-15 October 1978 in the Department of Biology of the University of Kaiserslautern and was attended by 40 participants from 11 universities between Hamburg and Vienna Emphasis of this Chromosome Symposium was given to three aspects which do not attract major interest at large international congresses 1 Discussion and Demonstration of technical details which cannot be found in published papers so called tricks 2 Orientation about actual trends and results in our understanding of the organization evolution and function of the plant genome at the level of the DNA gene the level of chromatin and the level of the karyotype 3 Presentation of hypotheses and models which may be stimulating for further research Moreover younger students should have the possibility to present their results and to discuss them with more experienced scientists

Prescott, 2012-12-02 Cell Biology A Comprehensive Treatise Volume 4 Gene Expression Translation and the Behavior of Proteins discusses the translation of genetic information into proteins It also explains the activities and behaviors of proteins which is the final stage of gene expression This book opens with a discussion of the components and mechanism of the translational machinery their

structures biogenesis and cellular levels It then explains the protein synthesis wherein each chapter focuses on one aspect of the detailed process Other topics covered in this book are the structure and function of cytoplasmic ribonucleoprotein complexes and the proteolytic cleavage in the posttranslational processing of proteins This text also covers the regulation of enzyme activity and the movement of material between nucleus and cytoplasm The last three chapters are more in depth discussions on protein synthesis intracellular transport regulation and secretion As with the other volumes of this book series readers will definitely benefit from the vast information provided in this book regarding protein its activities behaviors and synthesis

Microscopy, Optical Spectroscopy, and Macroscopic Techniques Christopher Jones, Barbara Mulloy, Adrian H. Thomas, 2008-02-02 This is the second of three volumes of Methods in Molecular Biology that deal with Physical Methods of Analysis The first of these Spectroscopic Methods and Analyses dealt with NMR spectroscopy mass spectrometry and metalloprotein techniques and the third will cover X ray crystallographic methods As with the first volume Microscopy Optical Spectroscopy and Macroscopic Techniques is intended to provide a basic understanding for the biochemist or biologist who needs to collaborate with specialists in applying the techniques of modern physical chemistry to biological macromolecules The methods treated in this book fall into four groups Part One covers microscopy which aims to visualize individual molecules or complexes of several molecules Electron microscopy is the more familiar of these while scanning tunneling microscopy is a new and rapidly developing tool Methods for determining the shapes and sizes of molecules in solution are described in Part Two which includes chapters on X ray and neutron scattering light scattering and ultracentrifugation Calorimetry described in Part Three provides the means to monitor processes involving thermodynamic changes whether these are intramolecular such as conformational transition or the interactions between solutes or between a solute and its solvent Part Four is concerned with optical and infrared spectroscopy and describes applications ranging from the measurement of protein concentration by UV absorbance to the analysis of secondary structure using circular dichroism and Fourier transform infrared spectroscopy
