Planetary Cartography and GIS Henrik Hargitai, 2019-02-22 This book approaches geological geomorphological and topographical mapping from the point in the workflow at which science ready datasets are available Though there have been many individual projects on dynamic maps and online GISs in which coding and data processing are given precedence over cartographic principles cartography is more than just processing and displaying spatial data However there are currently no textbooks on this rapidly changing field and methods tend to be shared informally Addressing this gap in the literature the respective chapters outline many topics pertaining to cartography and mapping such as the role and definition of planetary cartography and vs Geographic Information Science theoretical background and practical methodologies in geological mapping science ready versus public ready products a goal procedure focused practical manual of the most commonly used software in planetary mapping which includes generic ArcGIS and its extensions JMARS and specific tools HiView Cratertools etc extracting topographic information from images thematic mapping climate geophysics surface modeling change detection landing site selection shared maps dynamic maps on the web planetary GIS interfaces crowdsourcing crater counting techniques irregular bodies geological unit symbology mapping center activities and web services All chapters were prepared by authors who have actually produced geological maps or GISs for NASA the USGS DLR ESA or MIIGAİK Taken together they offer an excellent resource for all planetary scientists whose research depends on mapping and for students of astrogeology

Planetary Mapping Ronald Greeley, Raymond M. Batson, 1990-07-27 Planetary Mapping describes the history and process of mapping planets and satellites beyond the Earth Mapping planetary bodies is a unique process much different from ordinary terrestrial cartography The book begins with an introduction to the differences between terrestrial and planetary mapping and

continues with a general discussion of the history of planetary mapping The fundamentals of cartographic techniques are described in detail and appendixes on map formats and projects halftone processes for planetary maps and available mission data are also included The general language used in this book will make it accessible to researchers and students in planetary science as well as cartographers photogrammetrists geodesists geologists and geophysicists *World Mapping Today* Bob Parry,Chris Perkins,2011-12-22 No detailed description available for World Mapping Today

Geological Mapping of Our World and Others Robert W. H. Butler,Taija Torvela,Laura M. Williams,2024-04-23 Map making is a fundamental tool for developing geological knowledge It involves data collection and interpretation and has its roots in the earliest discoveries in Earth science It is the starting point for stratigraphic and structural interpretations metamorphic facies geochronology and modelling studies and underpins civil engineering From the beginning geological mapping rapidly evolved into far more than being a simple spatial catalogue of observable rock types and landforms on the Earth s land surface deductive reasoning allows this knowledge to infer subsurface Earth structure However the same approaches have also been down scaled to deduce processes on the grain scale or up scaled to look out to extraterrestrial objects This Special Publication draws together these strands crossing geoscience disciplines and observation scales to celebrate geological mapping its historical importance and future directions and its use in applied geology together with developing knowledge of Earth and planetary evolution and processes

Planetary Geology Angelo Pio Rossi,Stephan van Gasselt,2017-11-28 This book provides an up to date interdisciplinary geoscience focused overview of solid solar system bodies and their evolution based on the comparative description of processes acting on them Planetary research today is a strongly multidisciplinary endeavor with efforts coming from engineering and natural sciences Key focal areas of study are the solid surfaces found in our Solar System Some have a direct interaction with the interplanetary medium and others have dynamic atmospheres In any of those cases the geological records of those surfaces and sub surfaces are key to understanding the Solar System as a whole its evolution and the planetary perspective of our own planet This book has a modular structure and is divided into 4 sections comprising 15 chapters in total Each section builds upon the previous one but is also self standing The sections are Methods and tools Processes and Sources Integration and Geological Syntheses Frontiers The latter covers the far reaching broad topics of exobiology early life extreme environments and planetary resources all areas where major advancements are expected in the forthcoming decades and both key to human exploration of the Solar System The target readership includes advanced undergraduate students in geoscience related topics with no specific planetary science knowledge undergraduates in other natural science domains e g physics astronomy biology or chemistry graduates in engineering and space systems design who want to complement their knowledge in planetary science The authors backgrounds span a broad range of topics and disciplines rooted in Earth geoscience their expertise covers remote sensing and cartography field mapping impact cratering volcanology and tectonics sedimentology and stratigraphy exobiology and life in extreme environments planetary
