Abstract

The growing availability of high-resolution biodiversity data is enhancing our ability to implement biodiversity conservation more effectively. Spatial planning has widely utilized such fine-scale biodiversity data, and proposals of finely-organized protected area networks have been increasing. However, a naive adoption of such fine-scale data for conservation may not only degrade the utility of the data, but may even risk reduction of long-term efficacy of conservation efforts. This is due to inherent tradeoffs between the efficacy of conservation actions over short-term and its persistence over long-term that is characterized by the management scale of spatial planning associated with the resolution of the data used. To demonstrate this argument, the spatiotemporal ecosystem dynamics must be described, but such discussions are limited in the literature. Here, we discuss the potential issues associated with naive uses of fine-scale biodiversity data to establish fine-tuned spatial planning. We then emphasize the importance of matching the data resolution with an appropriate scale of spatial planning that is realized by transforming the data resolution. This method is readily applicable for widely used decision-support tools for spatial planning. A simple worked example is provided to demonstrate its utility with a long-term conservation efficacy in spatial planning. Guided by the recent explosion of biological data, our discussion provides new insights into the ways to maximize the utility of these data, and further improve biodiversity conservation.

1 Introduction

Effective conservation measures are urgently needed to reduce and reverse the ongoing global biodiversity loss and ecosystem degradation under increasing human pressures [1, 2]. In recent years, we have witnessed an explosion of open biodiversity data (raw observed records), including organism occurrence records (e.g., Global Biodiversity Information Facility (GBIF): <https://www.gbif.org/>; Ocean Biogeographic Information System (OBIS): <https://obis.org/>), ecological community data collected at local scales [3, 4], and citizen-science-based observations (e.g., iNaturalist: <https://inaturalist.org>; eBird) [5]. Accordingly, accumulated data play a central role in biodiversity mapping [6–8] and data-driven conservation planning [9–11]. This also provides a basis for spatial conservation planning (SCP), in which optimization

China's Energy Policy from National and International Perspectives Qinhua

XU, William CHUNG, 2016-09-30 Before 2000 roughly 96% of China's energy demands were met domestically. Since 2001, however, this position of near self-reliance has changed. With steadily increasing demands, China's need for foreign energy has grown. Today, China is the world's biggest energy consumer and emitter of greenhouse gases. Building upon the first volume, which examined China's energy plans, this book will examine the strategies China has taken to meet its burgeoning energy demands, continue its fast-paced economic growth, and also address the mounting concerns about environmental welfare and the true cost of China's development. With new chapters addressing international agreements, the so-called China energy threat, and the Belt and Road Initiative, this volume will continue to discuss and interpret both domestic policies and China's international role. Published by City University of Hong Kong Press. Shaping the Urban Landscape Gilbert Arthur Stelter, Gilbert A. Stelter, Alan F. J. Artibise, 1982 This is a collection of essays focusing on the process of city building in Canada. The authors weigh the relative broad social, economic, and technological trends as they attempt to explain the shaping of this urban landscape. **Energy Abstracts for Policy Analysis**, 1988 *Addressing Environmental Challenges Through Spatial Planning* Hussain, Athar, Tiwari, Kailash Chandra, Gupta, Alpana, 2021-12-17 Urbanization is giving rise to environmental concerns including urban flooding, which generally occurs due to the construction of houses in the low-lying areas, loss of green cover leading to a disturbance in the ecological cycle, water scarcity due to growing needs, and deforestation leading to habitat fragmentation, wildlife corridors disturbance, forest fires, and climate change. In order to correct these issues, a consolidated balance between human nature and spatial aspects must be resolved, and spatial solutions integrated on a common platform. *Addressing Environmental Challenges Through Spatial Planning* is devoted to addressing environmental concerns and technology innovations in domains such as pollution, water insecurity, and resources management. This text works to bridge the gap between engineering considerations and spatial aspects of planning. Covering topics such as sustainable housing, environmental restoration, and air emissions, this text is essential for environmental engineers, planning researchers, faculty, environmental and civil administrators, architects, consultants, environmental activists, town and country planning organizations, and professionals in all industries who aspire to have an environmentally friendly atmosphere and to provide a sustainable way of dealing with the environment in their respective domains for process efficiency and cost optimization. *APAIS 1991: Australian public affairs information service*, **International Perspectives on Family Violence and Abuse** Kathleen Malley-Morrison, 2012-12-06 In this book, in which definitions and examples of abuse from men and women from every continent and a very diverse set of backgrounds are considered, the volume provides information on the extent to which family violence is a recognized problem in each country, research findings available on different forms of family violence, and information on governmental responses to family violence. Finally, the value of an international human rights approach to abuse and violence in families is considered. The book presents an unparalleled international coverage addressing all forms of family violence in Australia and at least two countries from every other

continent Each chapter begins by describing the cultural context in which family violence and abuse take place These sections emphasize the role of women and children in the country Providing a multitude of voices each chapter includes fascinating and often dramatic definitions and examples of abuse from ordinary citizens of the country The concluding chapter elaborates on the appropriateness of a human rights approach in addressing family violence cross nationally and cross culturally and provides an excellent integration of much of the material from the previous chapters The book is intended for advanced undergraduates and graduate students in psychology and sociology as well as pre professionals and professionals in medicine law and social services It has strong relevance and value to individuals training in counseling counselor education and clinical psychology Because of its readable style and extensive use of quotations from citizens of the countries studied for the book it may also appeal to a much broader audience including a lay audience **Landscape**

Ecological Applications in Man-Influenced Areas Sun-Kee Hong, Nobukazu Nakagoshi, Bojie Fu, Yukihiro

Morimoto, 2007-06-02 Since the last century of ecological history landscape ecologists have played a role in solving many hot issues linking development and conservation of landscape Recently cause and consequences of landscape change are significantly related to rapid urbanization and land transformation in populated area Therefore ecological applications on the man influenced area are a worldwide issue and challenge in landscape ecology The aim of Landscape Ecological Applications in Man Influenced Areas is not only to expand concept of landscape ecology but also to apply its principle to man influenced ecosystems New dimensions of landscape ecological research in a global change such as urbanization biodiversity and land transformation are explored in this book This book also includes several case studies concerning landscape analysis and evaluation using spatial analysis and landscape modelling for establishing sustainable management strategy in urban and agricultural landscapes The subtitle of the book suggests the integrative and ubiquitous landscape planning considering harmony of man and nature systems in the socio economic and cultural background Such key issues and technology of landscape research will provide implements and guidebook for decision makers and land planners as well as teachers and students at universities
