Indicator Plants of Coastal British Columbia A. Ceska, A. M. Scagel, 1989-01-01 This original work makes unprecedented use of some of the most important research to date in plant ecology It is a guide for assessing site quality that is the climate and soil of particular forest and non forest ecosystems Foresters have long been interested in using plants as indicators in predicting the growth performance of reforestation sites but the data have not been readily available Indicator Plants of Coastal British Columbia fully discusses how indicator plants are recognized and demonstrates how indicator plants can be used in site diagnosis The book presents colour illustrations and descriptions of 419 selected vascular plants bryophytes and lichens of coastal British Columbia Indicators with similar values are grouped into indicator species groups which are used to evaluate site quality These data are supplemented by information on geographic distribution life form shade tolerance and other ecological characteristics of the species Three methods are given on how to use indicator plants for the purpose of site

diagnosis Indicator Plants of Coastal British Columbia summarizes original research in a format which both students and practitioners will find easy to use *SIPRE Report*, 1971 *Plant Indicators of Soils, Rocks and Subsurface Waters* Anatoliĭ Grigor'evich Chikishev, 1965 *Indicators of Environmental Quality* William A. Thomas, 2013-03-09 Researchers and agencies collect reams of objective data and authors publish volumes of subjective prose in attempts to explain what is meant by environmental quality Still we have no universally recognized methods for combining our quantitative measures with our qualitative concepts of environment Not all of our environmental goals should be reduced to mere numbers but many of them can be and without these quantitative terms we have no way of defining our present position nor of selecting positions we wish to attain on any logically established scale of environmental values Stated simply in our zeal to measure our environment we often forget that masses of numbers describing a system are insufficient to understand it or to be used in selecting goals and priorities for expending our economic and human resources Attempts at quantitatively describing environmental quality rather than merely measuring different environmental variables are relatively recent This condensing of data into the optimum number of terms with maximum information content is a truly interdisciplinary challenge When Oak Ridge National Laboratory initiated its Environmental Program in early 1970 under a grant from the National Science Foundation the usefulness of environmental indicators in assessing the effects of technology was included as one of the initial areas for investigation James L Liverman through his encouragement and firm belief that these indicators are indispensable if we are to resolve our complex environmental problems deserves much of the credit for the publication of this book
