contains information on around 100 invasive nematodes and their potential threat in different countries. Each nematode entry includes information on authentic identification, geographical distribution, risk of introduction, host ranges, symptoms, biology, ecology, planting material liable to carry the nematode, nematode vectors, chance of establishment, likely impact, and phytosanitary measures. There are detailed accounts of diagnosis procedures including sampling, isolation, detection, and identification of nematodes based on morphological and molecular characters. The book offers a global perspective on invasive plant parasitic nematodes and is useful for practitioners, professionals, scientists, researchers, students, and government officials working in plant quarantine and biosecurity.

**Plant Parasitic Nematodes in Sustainable Agriculture of North America** Sergei A. Subbotin, John J. Chitambar, 2018-12-17. Plant parasitic nematodes are recognized as one of the greatest threats to crop production throughout the world. Estimated annual crop losses of 8 billion in the United States and 78 billion worldwide are attributed to plant parasitic nematodes. Plant parasitic nematodes not only cause damage individually but form disease complexes with other microorganisms, thereby increasing crop loss. Nematode diseases of crops are difficult to control because of their insidious nature and lack of specific diagnostic symptoms which closely resemble those caused by other plant pathogens and abiotic diseases. Future developments of sustainable management systems for preventing major economical agricultural losses due to nematodes is focused on strategies that limit production costs, enhance crop yields, and protect the environment. This book presents a first compendium and overview for nematode problems and their management across North America. Each chapter provides essential information on the occurrence and distribution of plant parasitic nematodes, their major crop hosts, impact on crop production, and sustainable management strategies for each region of the continent including Canada, Mexico, and all states of the USA. For each region, a thematic overview of changes in crop production affected by plant parasitic nematodes and their management strategies over time will provide invaluable information on the important role of plant parasitic nematodes in sustainable agriculture.
