Plant Resistance To Insects A Fundamental Approach:

Plant Resistance to Insects C. Michael Smith, 1989-10-02 What is plant resistance to insects How is plant resistance to insects obtained How can plant resistance to insects be utilized

Plant Resistance to Arthropods C. Michael Smith, 2006-01-16 This book synthesizes new information about the environmental advantages of plant resistance transgenic resistance the molecular bases of resistance and the use of molecular markers to map resistance genes Readers are presented in depth descriptions of techniques to quantify resistance factors affecting resistance expression and the deployment of resistance genes New information about gene for gene interactions between resistant plants and arthropod biotypes is discussed along with the recent examples of using arthropod resistant plants in integrated pest management systems

Biological and Biotechnological Control of Insect Pests Jack E. Rechcigl, Nancy A. Rechcigl, 1999-09-24 Pest and disease management continues to challenge the agricultural community The rise in new pest and crop problems juxtaposed with public concern over pesticide use and more stringent environmental regulations creates the need for today's agricultural producers to stay current with new technologies for producing quality crops profitably Biological and Biotechnological Control of Insect Pests presents an overview of alternative measures to traditional pest management practices utilizing biological control and biotechnology The removal of some highly effective broad spectrum chemicals caused by concerns over environmental health and public safety has resulted in the development of alternative reduced risk crop protection products These products less toxic to the environment and easily integrated into biological control systems target specific life stages or pest species Predation recognized as a suitable long term strategy effectively suppresses pests in biotechnological control systems Biological and Biotechnological Control of Insect Pests covers these topics and more It explores the current approaches in alternative solutions such as biological control agents parasites and predators pathogenic microorganisms pheromones botanical insecticides genetic control genetic engineering of plants and biocontrol agents and government regulations for biocontrol agents and recombinant DNA technology This book will be a useful resource to entomologists agronomists horticulturists and environmental scientists

Techniques for Evaluating Insect Resistance in Crop Plants Charles M. Smith, Z. R. Khan, Mano Dutta Pathak, 1993-12-17 This comprehensive book is the first illustrated volume to provide detailed discussions of all plant genera regarding techniques developed to evaluate plant resistance to insects Many of the book's references have never before appeared in a volume on this subject The authors systematically discuss techniques used to evaluate different types of insect behavior and plant morphological and phytochemical factors responsible for plant resistance and susceptibility to insects

Grasshoppers and Grassland Health Jeffrey A. Lockwood, Alexandre V. Latchininsky, Michael G. Sergeev, 2012-12-06 Acridids grasshoppers and locusts can range from being rare curiosities to abundant menaces Some are threatened with extinction and become subjects of intensive conservation efforts while others are devastating pests and become the objects of massive control programmes Even within a species there are times when the animal is so abundant that its crushed masses cause the wheels of trains to skid the Rocky Mountain grasshopper *Melanoplus spretus* Walsh in western North America in the 1860s and 1870s while at other times the animal is alarmingly scarce the Rocky Mountain grasshopper went extinct in the early 1900s Why are there these extremes in one insect family and even in a single species The NATO workshop examined this paradox and its implications for Environmental Security which must address both the elements of land use agricultural production and pest management and conservation of biodiversity The reconciliation of these objectives clearly demands a critical assessment of current knowledge and policies identification of future research and close working relationships among scientists Insects can present two clear faces as well as the intervening gradation These extremes require us to respond in two ways conservation of scarce species and suppression of abundant harmful species But perhaps most important these opposite poles also provide the opportunity for an exchange of information and insight

Integrated management of insect pests: Current and future developments Emeritus Prof. Marcos Kogan, Emeritus Prof. E. A. Heinrichs, 2019-10-29 Particular focus on advances in understanding insect species and landscape ecology which provide the foundations for effective IPM Covers latest research on classical conservation and augmentative biological control Reviews key developments in use of entomopathogenic fungi viruses and nematodes

Crop Responses to Environment Anthony E. Hall, 2018-02-19 Following in the tradition of its predecessor Crop Responses to Environment this fully updated and more comprehensive second edition describes aspects of crop responses to environment that are particularly relevant to the development of improved crop cultivars and management methods on a global scale It includes an extensive discussion of the difficulties in developing agricultural systems that accommodate increasing human needs for agricultural products during the twenty first century in a sustainable manner The book features new sections on adaptation

to global climate change including adapting to global warming elevated atmospheric carbon dioxide concentration and increased flooding and salinity through plant breeding and changes in crop management Warming effects include stressful effects of heat on pollen development and reduced winter chilling effects on fruit and nut trees The book examines principles theories mathematical models and experimental observations concerning plant responses to environment that are relevant to the development of improved crop cultivars and management methods It illustrates the importance of considering emergent plant properties as well as reductionist approaches to understanding plant function and adaptation Plant physiological and developmental responses to light and temperature and plant water relations are considered in detail Dr Hall also describes climatic zone definitions based on temperature rainfall and evaporative demand in relation to plant adaptation and the prediction of crop water use Irrigation management and crop responses to salinity flooding and toxic levels of boron and aluminum are considered Crop responses to pests and diseases as they interact with crop responses to physical and chemical aspects of the environment are examined The book concludes with analyses illustrating the relevance of crop responses to environment to plant breeding

Crop Production and Global Environmental Issues Khalid Rehman Hakeem, 2015-12-08

Meeting the world's food security challenge will require a multi national collaborative effort to integrate the best research from science engineering and socioeconomics so that technological advances can bring benefits where they are most needed The present book covers the effect of major environmental problems on crop production and how to cope with these issues for sustainable agriculture and improvements of crops The world's population is predicted to hit 9.6 Billion by 2050 up from today's total of nearly 7.3 Billion and with it food demand is predicted to increase substantially The post war second agricultural revolution in developed countries and the green revolution in developing nations in the mid 1960s converted agricultural practices and elevated crop yields spectacularly but the outcome is levelling off and will not meet projected demand Simultaneously crop production is affected by many other factors including industrial pollution overuse of fertilizers and insecticides heavy metal and radiation stresses etc It has been noted that many pests are becoming resistant to insecticides Estimates vary but around 25% of crops can be lost to pests and diseases Climate change associated with agriculture is also a global issue Agriculture is a significant contributor to greenhouse gases and is estimated to account for 10-12% of total greenhouse gas GHG emissions Many of the issues highlighted are global problems and are addressed thoroughly in this work
