Revegetation and Ecotoxicological Assessment of Abandoned Copper Mine for improved Remediation Utilizing Native Plant Species Ramkrishna

Nirola,2016-12-22 When mining activities cease its environmental impact continues as a consequence of which all the adjacent vegetation soils groundwater etc are exposed to a very high concentration of heavy metals The toxic heavy metals present in the tailings or spoils of abandoned mines migrate to the surroundings and cause severe and widespread contamination of farmland soils and water bodies leading to the onset of geo environment disasters One such example is a recent one in Brazil that released 60 million cubic meters of mine waste due to iron ore dam burst according to The Guardian daily dated 28 November 2015

The Flowering of Australia's Rainforests Geoff Williams,2021-05-03 The Flowering of Australia s Rainforests provides a comprehensive introduction to the pollination ecology evolution and conservation of Australian rainforest plants with particular emphasis on subtropical rainforests and their associated pollinators This

significantly expanded second edition includes new information on the impact of climate change fire fragmentation and invasive species Rainforests continue to be a focus of global conservation concern not only from threats to biodiversity in general but to pollinators specifically Within Australia this has been emphasised by recent cataclysmic fire impacts ongoing extreme drought events and the wider consideration of climate change This second edition strengthens coverage of these issues beyond that of the first edition The Flowering of Australia's Rainforests makes timely contributions to our understanding of the nature and function of the world's pollinator fauna plant reproduction dependencies and the evolutionary pathway that has brought them to their current state and function Illustrated with 150 colour plates of major species and rainforest formations this reference work will be of value to ecologists and field naturalists botanists conservation biologists ecosystem managers and community groups involved in habitat restoration

Drought Stress Tolerance in Plants, Vol 2 Mohammad Anwar Hossain, Shabir Hussain Wani, Soumen Bhattacharjee, David J Burritt, Lam-Son Phan Tran, 2016-08-24 Drought is one of the most severe constraints to crop productivity worldwide and thus it has become a major concern for global food security Due to an increasing world population droughts could lead to serious food shortages by 2050 The situation may worsen due to predicated climatic changes that may increase the frequency duration and severity of droughts Hence there is an urgent need to improve our understanding of the complex mechanisms associated with drought tolerance and to develop modern crop varieties that are more resilient to drought Identification of the genes responsible for drought tolerance in plants will contribute to our understanding of the molecular mechanisms that could enable crop plants to respond to drought The discovery of novel drought related genes the analysis of their expression patterns in response to drought and determination of the functions these genes play in drought adaptation will provide a base to develop effective strategies to enhance the drought tolerance of crop plants Plant breeding efforts to increase crop yields in dry environments have been slow to date mainly due to our poor understanding of the molecular and genetic mechanisms involved in how plants respond to drought In addition when it comes to combining favourable alleles there are practical obstacles to developing superior high yielding genotypes fit for drought prone environments Drought Tolerance in Plants Vol 2 Molecular and Genetic Perspectives combines novel topical findings regarding the major molecular and genetic events associated with drought tolerance with contemporary crop improvement approaches This volume is unique as it makes available for its readers not only extensive reports of existing facts and data but also practical knowledge and overviews of state of the art technologies across the biological fields from plant breeding using classical and molecular genetic information to the modern omic technologies that are now being used in drought tolerance research to breed drought related traits into modern crop varieties This book is useful for teachers and researchers in the fields of plant breeding molecular biology and biotechnology

Sprinter and Sprummer Timothy Entwisle, 2014-09-01 *Sprinter and Sprummer* challenges the traditional four seasons and encourages us to think about how we view changes in our natural world Since 1788 Australia

has carried the yoke of four European seasons that make no sense in most parts of the country We may like them for historical or cultural reasons or because they are the same throughout the world but they tell us nothing of our natural environment It s time to reject those seasons and to adopt a system that brings us more in tune with our plants and animals a system that helps us to notice and respond to climate change Using examples from his 25 years working in botanic gardens author Timothy Entwisle illustrates how our natural world really responds to seasonal changes in temperature rainfall and daylight and why it would be better to divide up the year based on what Australian plants do rather than ancient rites of the Northern Hemisphere Sprinter and Sprummer opens with the origins and theory of the traditional seasonal system and goes on to review the Aboriginal seasonal classifications used across Australia Entwisle then proposes a new five season approach explaining the characteristics of each season along with the biological changes that define them The book uses seasons to describe the fascinating triggers in the life of a plant and plant like creatures using charismatic flora such as carnivorous plants the Wollemi Pine and orchids as well as often overlooked organisms such as fungi The final chapter considers climate change and how the seasons are shifting whether we like it or not

Soil Remediation and Plants Khalid Hakeem,Muhammad Sabir,Munir Ozturk,Ahmet Ruhi Mermut,2014-08-29 The soil is being contaminated continuously by a large number of pollutants Among them heavy metals are an exclusive group of toxicants because they are stable and difficult to disseminate into non toxic forms The ever increasing concentrations of such pollutants in the soil are considered serious threats toward everyone s health and the environment Many techniques are used to clean eliminate obliterate or sequester these hazardous pollutants from the soil However these techniques can be costly labor intensive and often disquieting Phytoremediation is a simple cost effective environmental friendly and fast emerging new technology for eliminating toxic heavy metals and other related soil pollutants Soil Remediation and Plants provides a common platform for biologists agricultural engineers environmental scientists and chemists working with a common aim of finding sustainable solutions to various environmental issues The book provides an overview of ecosystem approaches and phytotechnologies and their cumulative significance in relation to solving various environmental problems Identifies the molecular mechanisms through which plants are able to remediate pollutants from the soil Examines the challenges and possibilities towards the various phytoremediation candidates Includes the latest research and ongoing progress in phytoremediation
