Plants In Danger What Do We Know:

Plants in Danger Stephen D. Davis, 1986 *Endangered Species of Plants* Jayne T. MacLean, 1989 **1997 IUCN Red List of Threatened Plants** World Conservation Monitoring Centre, 1998 This book represents the most comprehensive compilation of data on threatened vascular plants ever published It includes the names of some 33 000 plant species determined to be rare or threatened on a global scale Conservation assessments were provided by the IUCN Species Survival Commission the National Botanical Institute South Africa Environment Australia and CSIRO The Nature Conservancy the Smithsonian Institution and the Royal Botanic Gardens Kew together with hundreds of botanic gardens and botanists throughout the world The Royal Botanic Gardens Edinburgh and the New York Botanical Garden have made major in kind contributions The result of 20 years work by botanists and conservationists around the world it is intended as a conservation tool a provider of baseline information to measure conservation progress and as a primary source of data on plant species Most importantly however it provides the building blocks on which to base a worldwide effort to conserve plant species

Rare or Threatened Australian Plants JD Briggs, JH Leigh, 1996-01-01 The Rare or Threatened Australian Plants ROTAP list and associated coding system was developed and has been maintained by CSIRO since 1979 and lists taxa that are Presumed Extinct Endangered Vulnerable Rare or Poorly Known at the national level This edition provides the most up to date list for conservation purposes A significant number of endangered and Vulnerable taxa are included which have not yet been considered for inclusion on either the Australian and New Zealand Environment and Conservation Council list or the Commonwealth s Schedule 1 This is the first ROTAP publication to include subspecies and varieties and the list now includes 5031 taxa There have also been at least 3270 amendments to data for listed taxa A total of 2012 additional records of regional data for taxa already listed has been included A key factor in the development of public opinion and the design of effective management schemes lies in the production of accurate data to tell the story What is threatened Where is it found These are two of the most fundamental questions to answer before any strategic plans can be drawn up Obtaining such apparently simple statistics is a huge task *Rare or Threatened Australian Plants* is therefore an important reference for the national status of threatened species particularly for Rare and Poorly Known species Technologies to Maintain Biological

Diversity , 1987 **The State of the Earth** Joni Seager, 1990 In 37 full colour international maps *The State of the Earth* examines the health of the planet and the quality of human life It illustrates all the critical issues global warming holes in the ozone layer rainforest destruction the loss of wildlife pollution of every sort It identifies the effects of industrial and urban expansion changing methods of agriculture and ever increasing demands for energy It measures our ability to meet basic human needs while protecting other forms of life As the Chernobyl nuclear accident proved so dramatically in 1986 environmental problems do not stop at state boundaries *The State of the Earth* reflects world wide public concern for our environment and considers the need for more effective international organizations and agreements With facts on a broad

range of topics from air quality and acid rain to toxic waste and tourism this book should be a comprehensive source of reference *Botanic Gardens and the World Conservation Strategy*, 1985 *Encyclopedia of Biodiversity*, 2013-02-05 The 7 volume Encyclopedia of Biodiversity Second Edition maintains the reputation of the highly regarded original presenting the most current information available in this globally crucial area of research and study It brings together the dimensions of biodiversity and examines both the services it provides and the measures to protect it Major themes of the work include the evolution of biodiversity systems for classifying and defining biodiversity ecological patterns and theories of biodiversity and an assessment of contemporary patterns and trends in biodiversity The science of biodiversity has become the science of our future It is an interdisciplinary field spanning areas of both physical and life sciences Our awareness of the loss of biodiversity has brought a long overdue appreciation of the magnitude of this loss and a determination to develop the tools to protect our future Second edition includes over 100 new articles and 226 updated articles covering this multidisciplinary field from evolution to habits to economics in 7 volumes The editors of this edition are all well respected instantly recognizable academics operating at the top of their respective fields in biodiversity research readers can be assured that they are reading material that has been meticulously checked and reviewed by experts Approximately 1 800 figures and 350 tables complement the text and more than 3 000 glossary entries explain key terms Wild Plant Conservation and the Law Cyrille de Klemm, 1990 *Conservation Biology* Peggy L. Fiedler, 2012-12-06 John Harper Nature conservation has changed from an idealistic philosophy to a serious technology Ecology the science that underpins the technology of conservation is still too immature to provide all the wisdom that it must It is arguable that the desire to conserve nature will in itself force the discipline of ecology to identify fundamental problems in its scientific goals and methods In return ecologists may be able to offer some insights that make conservation more practicable Harper 1987 The idea that nature species or communities is worth preserving rests on several fundamental arguments particularly the argument of nostalgia and the argument of human benefit and need Nostalgia of course is a powerful emotion With some notable exceptions there is usually a feeling of dismay at a change in the status quo whether it be the loss of a place in the country for walking or rambling the loss of a painting or architectural monument or that one will never again have the chance to see a particular species of bird or plant
