Plasma Acceleration:

Laser-plasma Acceleration : Proceedings of the International School of Physics "Enrico Fermi", Varenna on Lake Como, Villa Monastero, 20-25 June 2011 Fernando Ferroni, Leonida Antonio Gizzi, Riccardo Faccini, 2012 Impressive progress has been made in the field of laser plasma acceleration in the last decade with outstanding achievements from both experimental and theoretical viewpoints Closely exploiting the development of ultra intense ultrashort pulse lasers laser plasma acceleration has developed rapidly achieving accelerating gradients of the order of tens of GeV/m and making the prospect of miniature accelerators a more realistic possibility This book presents the lectures delivered at the Enrico Fermi International School of Physics and summer school Laser Plasma Acceleration held in Varenna Italy in June 2011 Studies of Proton Driven Plasma Wakefield Acceleration Yangmei Li, 2020-07-15 This thesis focuses on a cutting edge area of research which is aligned with CERN's mainstream research the AWAKE project dedicated to proving the capability of accelerating particles to the energy frontier by the high energy proton beam The author participated in this project and has advanced the plasma wakefield theory and modelling significantly especially concerning future plasma acceleration based collider design The thesis addresses electron beam acceleration to high energy whilst preserving its high quality driven by a single short proton bunch in hollow plasma It also demonstrates stable deceleration of multiple proton bunches in a nonlinear regime with strong resonant wakefield excitation in hollow plasma and generation of high energy and high quality electron or positron bunches Further work includes the assessment of transverse instabilities induced by misaligned beams in hollow plasma and enhancement of the wakefield amplitude driven by a self modulated long proton bunch with a tapered plasma This work has major potential to impact the next generation of linear colliders and also in the long term may help develop compact accelerators for use in industrial and medical facilities **Phase Space Dynamics in Plasma Based Wakefield Acceleration** Xinlu Xu, 2020-01-02 This book explores several key issues in beam phase space dynamics in plasma based wakefield accelerators It reveals the phase space dynamics of ionization based injection methods by identifying two key phase mixing processes Subsequently the book proposes a two color laser ionization injection scheme for generating high quality beams and assesses it using particle in cell PIC simulations To eliminate emittance growth when the beam propagates between plasma accelerators and traditional accelerator components a method using longitudinally tailored plasma structures as phase space matching components is proposed Based on the aspects above a preliminary design study on X ray free electron lasers driven by plasma accelerators is presented Lastly an important type of numerical noise the numerical Cherenkov instabilities in particle in cell codes is systematically studied **Nuclear Science Abstracts**, 1976 Investigation of Staged Laser-Plasma Acceleration Satomi Shiraishi, 2014-07-10 This thesis establishes an exciting new beginning for Laser Plasma Accelerators LPAs to further develop toward the next generation of compact high energy accelerators Design installation and commissioning of a new experimental setup at LBNL played an important role and are

detailed through three critical components e beam production reflection of laser pulses with a plasma mirror and large wake excitation below electron injection threshold Pulses from a 40 TW peak power laser system were split into a 25 TW pulse and a 15 TW pulse The first pulse was used for e beam production in the first module and the second pulse was used for wake excitation in the second module to post accelerate the e beam As a result reliable e beam production and efficient wake excitation necessary for the staged acceleration were independently demonstrated These experiments have laid the foundation for future staging experiments at the 40 TW peak power level Challenges and Goals for Accelerators in the XXI Century Oliver Brüning, Stephen Myers, 2015

The past 100 years of accelerator based research have led the field from first insights into the structure of atoms to the development and confirmation of the Standard Model of physics Accelerators have been a key tool in developing our understanding of the elementary particles and the forces that govern their interactions This book describes the past 100 years of accelerator development with a special focus on the technological advancements in the field the connection of the various accelerator projects to key developments and discoveries in the Standard Model how accelerator technologies open the door to other applications in medicine and industry and finally presents an outlook of future accelerator projects for the coming decades Provided by publisher **Energy information data base** United States. Energy Research Abstracts, 1978 Materials Under Extreme Conditions A. K. Tyagi, S. Banerjee, 2017-01-13 Materials Under Extreme Conditions Recent Trends and Future Prospects analyzes the chemical transformation and decomposition of materials exposed to extreme conditions such as high temperature high pressure hostile chemical environments high radiation fields high vacuum high magnetic and electric fields wear and abrasion related to chemical bonding special crystallographic features and microstructures The materials covered in this work encompass oxides non oxides alloys and intermetallics glasses and carbon based materials The book is written for researchers in academia and industry and technologists in chemical engineering materials chemistry chemistry and condensed matter physics Describes and analyzes the chemical transformation and decomposition of a wide range of materials exposed to extreme conditions Brings together information currently scattered across the Internet or incoherently dispersed amongst journals and proceedings Presents chapters on phenomena materials synthesis and processing characterization and properties and applications Written by established researchers in the field **OAR Quarterly Index of Current Research Results** United States. Technical Information Center, 1978 **Reviews Of Accelerator Science And Technology - Volume 9: Technology And Applications Of Advanced Accelerator Concepts** Alexander Wu Chao, Weiren Chou, 2017-02-20 Since its invention in the 1920s particle accelerators have made tremendous

progress in accelerator science technology and applications However the fundamental acceleration principle namely to apply an external radiofrequency RF electric field to accelerate charged particles remains unchanged As this method either room temperature RF or superconducting RF is approaching its intrinsic limitation in acceleration gradient measured in MeV/m it becomes apparent that new methods with much higher acceleration gradient measured in GeV/m must be found for future very high energy accelerators as well as future compact table top or room size accelerators This volume introduces a number of advanced accelerator concepts AAC their principles technologies and potential applications For the time being none of them stands out as a definitive direction in which to go But these novel ideas are in hot pursuit and look promising Furthermore some AAC requires a high power laser system This has the implication of bringing two different communities accelerator and laser to join forces and work together It will have profound impact on the future of our field Also included are two special articles one on Particle Accelerators in China which gives a comprehensive overview of the rapidly growing accelerator community in China The other features the person of the issue who was well known nuclear physicist Jerome Lewis Duggan a pioneer and founder of a huge community of industrial and medical accelerators in the US

Zana, 1986 *Inertial Electrostatic Confinement Thruster (IECT)* Yung-An Chan, 2022-09-19 This work summarizes the state of the art development of inertial electrostatic confinement IEC thruster which can be divided into two parallel lines of development the IEC plasma source and the corresponding electromagnetic nozzle EMN Both developing lines start from the establishment of the theory and modeling and evolve to the design implementation and experimental verification The IEC discharge model highlights a novel perspective on the IEC discharge physics and the impacts of the respective critical parameters which layouts the design for the IEC plasma source Experimental verification for the theory is demonstrated via the optical emission spectroscopy and collision radiative model The results provide conclusive evidence of forming a spherical double layer within the IEC plasma source which is the key to establishing the proposed IEC discharge theory in this work This work presents a comprehensive study on the magnetohydrodynamic theory for assessing the plasma acceleration in the magnetic nozzle Nevertheless the result shows a performance limitation of the magnetic nozzle An innovative invention is proposed to overcome the limitation known as the EMN Thorough descriptions of EMN and its working principle are summarized in this work including its effects on plasma confinement acceleration and detachment Investigation of the plasma plume properties by miscellaneous plasma diagnostics tools further demonstrates EMN functionality and constitutes the first IECT prototype with proof of concept in literature
