Institut atomnoi energii, 1959 *Atomic and Plasma-material Interaction Processes in Controlled Thermonuclear Fusion* Ratko K. Janev, Hans-Werner Drawin, 1993 Atomic and plasma material interaction processes play an important role in thermonuclear fusion plasmas and the knowledge of these processes has a significant impact on fusion energy research and development The present volume provides a comprehensive survey of atomic and plasma material interaction aspects of controlled thermonuclear fusion The review articles included in this volume describe the role of atomic and plasma material interaction processes in the currently most active fusion research areas and emphasize the need for accurate quantitative information on these processes for resolving many outstanding issues in fusion research and reactor design development such as plasma energy balance particle transport and confinement impurity control thermal power and helium exhaust plasma heating and fuelling edge plasma physics development of fusion reactor plasma facing components and plasma diagnostics and modelling

Controlled Thermonuclear Fusion Jean Louis Bobin, 2014-03-12 The book is a presentation of the basic principles and main achievements in the field of nuclear fusion It encompasses both magnetic and inertial confinements plus a few exotic mechanisms for nuclear fusion The state of the art regarding thermonuclear reactions hot plasmas tokamaks laser driven compression and future reactors is given *Plasma Physics And Controlled Thermonuclear Fusion - Proceedings Of The Ii Latin American Workshop* Ricardo Krikorian, 1989-05-01 The workshop covered experimental and theoretical topics of current interest on plasma research **Plasma Physics and the Problem of Controlled Thermonuclear Reactions** Institut atomnoi energii (Akademiia nauk SSSR), 1959 Atomic and Molecular Physics of Controlled Thermonuclear Fusion Douglass E. Joachain, 2013-06-29 The need for long term energy sources in particular for our highly technological society has become increasingly apparent during the last decade One of these sources of tremendous potential importance is controlled thermonuclear fusion The goal of controlled thermonuclear fusion research is to produce a high temperature completely ionized plasma in which the nuclei of two hydrogen isotopes deuterium and tritium undergo enough fusion reactions so that the nuclear energy released by these fusion reactions can be transformed into heat and electricity with an overall gain in energy This requires average kinetic energies for the nuclei of the order of 10 keV corresponding to temperatures of about 100 million degrees Moreover the plasma must remain confined for a certain time interval during which sufficient energy must be produced to heat the plasma overcome the energy losses and supply heat to the power station At present two main approaches are being investigated to achieve these objectives magnetic confinement and inertial confinement In magnetic confinement research a low density plasma is heated by electric currents assisted by additional heating methods such as radio frequency heating or neutral beam injection and the confinement is achieved by using various magnetic field
