Poisons From Hemlock To Botox To The Killer Bean Of Calabar:

Poisons Peter Macinnis, 2011-05-15 Poisons permeate our world. They are in the environment, the workplace, the home. They are in food, our favorite whiskey, medicine, and well water. They have been used to cure diseases as well as incapacitate and kill. They smooth wrinkles, block pain, stimulate and enhance athletic ability. In this entertaining and fact-filled book, science writer Peter Macinnis considers poisons in all their aspects. He recounts stories of the celebrated poisoners in history and literature from Nero to Thomas Wainwright and from the death of Socrates to Hamlet and Peter Pan. From cyanide to strychnine, from Botox to ricin and Sarin gas, have you ever wondered about their sources? Where do they come from? How do you detect something that can kill you in a matter of seconds? Macinnis methodically analyzes the science of these killing agents and their uses in medicine, cosmetics, war, and terrorism. With wit and precision, he weighs these questions and many more. Was Lincoln's volatility caused by mercury poisoning? Was Jack the Ripper an arsenic eater? Can wallpaper kill? For anyone who has ever wondered and been afraid to ask, here is a rich miscellany for your secret questions about toxins.

Poisons Peter Macinnis, 2011-05-15 Uses history, science, and fun poison facts to make lively reading of all things lethal. The Boston **Information Resources in Toxicology, Volume 1: Background, Resources, and Tools**, 2020-05-16 This new fifth edition of *Information Resources in Toxicology* offers a consolidated entry portal for the study, research, and practice of toxicology. Both volumes represent a unique, wide-ranging, curated international annotated bibliography and directory of major resources in toxicology and allied fields such as environmental and occupational health, chemical safety, and risk assessment. The editors and authors are among the leaders of the profession, sharing their cumulative wisdom in toxicology's subdisciplines. This edition keeps pace with the digital world in directing and linking readers to relevant websites and other online tools. Due to the increasing size of the hardcopy publication, the current edition has been divided into two volumes to make it easier to handle and consult. Volume 1: Background, Resources, and Tools, arranged in 5 parts, begins with chapters on the science of toxicology, its history, and informatics framework in Part 1. Part 2 continues with chapters organized by more specific subject, such as cancer, clinical toxicology, genetic toxicology, etc. The categorization of chapters by resource format, for example, journals and newsletters, technical reports, organizations, constitutes Part 3. Part 4 further considers toxicology's presence via the Internet, databases, and software tools. Among the miscellaneous topics in the concluding Part 5 are laws and regulations, professional education, grants and funding, and patents. Volume 2: The Global Arena offers contributed chapters focusing on the toxicology contributions of over 40 countries, followed by a glossary of toxicological terms and an appendix of popular quotations related to the field. The book, offered in both print and electronic formats, is carefully structured, indexed, and cross-referenced to enable users to easily find answers to their questions or serendipitously locate useful knowledge they were not originally aware they needed. Among the many timely topics receiving increased emphasis are disaster preparedness, nanotechnology, omics, risk assessment, societal implications such as ethics, and the precautionary principle.

climate change and children's environmental health Introductory chapters provide a backdrop to the science of toxicology its history the origin and status of toxicoinformatics and starting points for identifying resources Offers an extensive array of chapters organized by subject each highlighting resources such as journals databases organizations and review articles Includes chapters with an emphasis on format such as government reports general interest publications blogs and audiovisuals Explores recent internet trends web based databases and software tools in a section on the online environment Concludes with a miscellany of special topics such as laws and regulations chemical hazard communication resources careers and professional education K 12 resources funding poison control centers and patents Paired with Volume Two which focuses on global resources this set offers the most comprehensive compendium of print digital and organizational resources in the toxicological sciences with over 120 chapters contributions by experts and leaders in the field **The North American**

Murder is about infamous murderers and famous victims about people like Harold Shipman Alexander Litvinenko Adelaide Bartlett and Georgi Markov Few books on poisons analyse these crimes from the viewpoint of the poison itself doing so throws a new light on how the murders or attempted murders were carried out and ultimately how the perpetrators were uncovered and brought to justice Part I includes molecules which occur naturally and were originally used by doctors before becoming notorious as murder weapons Part II deals with unnatural molecules mainly man made and they too have been

dangerously misused in famous crimes The book ends with the most famous poisoning case in recent years that of Alexander Litvinenko and his death from polonium chloride The first half of each chapter starts by looking at the target molecule itself its discovery its history its chemistry its use in medicine its toxicology and its effects on the human body The second half then investigates a famous murder case and reveals the modus operandi of the poisoner and how some were caught some are still at large and some literally got away with murder Molecules of Murder will explain how forensic chemists have developed cunning ways to detect minute traces of dangerous substances and explain why some of these poisons which appear so life threatening are now being researched as possible life savers Award winning science writer John Emsley has assembled another group of true crime and chemistry stories to rival those of his highly acclaimed Elements of Murder **Information**

history of internal security under the first Roman dynasty this groundbreaking book answers the enduring question If there were 9 000 men guarding the emperor how were three quarters of Rome s leaders assassinated Rose Mary Sheldon traces the evolution of internal security mechanisms under the Julio Claudians evaluating the system that Augustus first developed to protect the imperial family and the stability of his dynasty Yet in spite of the intensive precautions taken there were multiple attempts on his life Like all emperors Augustus had a number of competing constituencies the senate the army his extended family the provincials and the populace of Rome but were they all equally threatening Indeed the biggest threat would come from those closest to the emperor his family and the aristocracy Even Roman imperial women were deeply involved in instigating regime change By the fourth emperor Caligula the Praetorian Guards were already participating in assassinations and the army too was becoming more politicized Sheldon weighs the accuracy of ancient sources Does the image of the emperor presented to us represent reality or what the people who killed him wanted us to think Were Caligula and Nero really crazy or did senatorial historians portray them that way to justify their murder Was Claudius really the fool found drooling behind a curtain and made emperor or was he in on the plot from the beginning These and other fascinating questions are answered as Sheldon concludes that the repeated problem of killing Caesar reflected the empire s larger dynamics and turmoil
