Business Policy and Strategic Management Elisha Stephens & Brice Martin, 2019-08-28 The knowledge of business policy and techniques of strategic management is the need of the hour to prospective business managers The present competitive environment has brought several drastic changes in policy making and strategic management Hence there is necessity of theoretical understanding about the business policy as well as strategic management Businesses need to implement sound strategies to succeed Those strategies form part of an overall management and business policy that guides the business in connecting with customers generating profits and managing resources The related concepts of strategic management and business policy are keys to help small business owners manage their responsibilities and set clear objectives Strategic management represents a theoretical concept first introduced by Peter Drucker in the mid 20th century

The idea behind strategic management is that organizations will be better equipped to meet their goals and objectives if the owners and managers adopt a clear business philosophy For many businesses that philosophy will be to increase their share of the market For others it might be about making a difference in the community or about developing new products Sometimes a combination of motives drives the management s strategy In any case strategic management helps the business to keep its sights set on what matters most and to not get distracted by ancillary concerns Strategic management is the art and science of formulating implementing and evaluating cross functional decisions that will enable an organization to achieve its objectives It is the process of specifying the organization s objectives developing policies and plans to achieve these objectives and allocating resources to implement the policies and plans to achieve the organization s objectives Strategic management therefore combines the activities of the various functional areas of a business to achieve organizational objectives This book is designed to support and enhance both learning and teaching An important aspect of the style adopted for this book is the use of exhibits presenting a vast gamut of information regarding special theoretical matter

Systems Science for Complex Policy Making Kuntoro Mangkusubroto, Utomo Sarjono Putro, Santi Novani, Kyoichi Kijima, 2016-05-27 This volume applies a systems science perspective to complex policy making dynamics using the case of Indonesia to illustrate the concepts Indonesia is an archipelago with a high heterogeneity Her people consist of 1 340 tribes who are scattered over 17 508 islands Every region has different natural strengths and conditions In the national development process all regions depend on one another other while optimizing their own conditions In addition to this diversity Indonesia also employs a democratic system of government with high regional autonomy A democratic government puts a high value on individual freedom but on the other hand conflicts of interest also occur frequently High regional autonomy also often causes problems in coordination among agencies and regional governments This uniqueness creates a kind of complexity that is rarely found in other countries These daily complexities requires intensive interaction negotiation processes and coordination Such necessities should be considered in public policy making and in managing the implementation of national development programs In this context common theories and best practices generated on the basis of more simplified assumptions often fail Systems science offer a way of thinking

that can take into account and potentially overcome these complexities However efforts to apply systems science massively and continuously in real policy making by involving many stakeholders are still rarely carried out The first part of the book discusses the gap between the existing public policy making approach and needs in the real world After that the characteristics of the appropriate policy making process in a complex environment and how this process can be carried are described In later sections important systems science concepts that can be applied in managing these complexities are discussed Finally the efforts to apply these concepts in real cases in Indonesia are described
