Politics and the Internet William H. Dutton, Elizabeth Dubois, 2013 SPECIAL INTRODUCTORY PRICE Valid until 3 months after publication It is commonplace to observe that the Internet and the dizzying technologies and applications which it continues to spawn has revolutionized human communications But while the medium s impact has apparently been immense the nature of its political implications remains highly contested To give but a few examples the impact of networked individuals and institutions has prompted serious scholarly debates in political science and related disciplines on the evolution of e government and e politics especially after recent US presidential campaigns electronic voting and other citizen participation activism privacy and surveillance and the regulation and governance of cyberspace As research in and around politics and the Internet flourishes as never before this new four volume collection from Routledge s acclaimed Critical Concepts in Political Science series meets the need for an authoritative reference work to make sense of a rapidly growing and ever more complex corpus of literature Edited by William H Dutton Director of the Oxford Internet Institute OII the collection gathers foundational and canonical work together with innovative and cutting edge applications and interventions With a full index and comprehensive bibliographies together with a new introduction by the editor which places the collected material in its historical and intellectual context Politics and the Internet is an essential work of reference The collection will be particularly useful as a database allowing scattered and often fugitive material to be easily located It will also be welcomed as a crucial tool permitting rapid access to less familiar and sometimes overlooked texts For researchers students practitioners and policy makers it is a vital one stop research and pedagogic resource All Politics Is Global Daniel W. Drezner, 2008-08-18 Has globalization diluted the power of national governments to regulate their own economies Are international governmental and nongovernmental organizations weakening the hold of nation states on global regulatory

agendas Many observers think so But in All Politics Is Global Daniel Drezner argues that this view is wrong Despite globalization states especially the great powers still dominate international regulatory regimes and the regulatory goals of states are driven by their domestic interests As Drezner shows state size still matters The great powers the United States and the European Union remain the key players in writing global regulations and their power is due to the size of their internal economic markets If they agree there will be effective global governance If they don't agree governance will be fragmented or ineffective And paradoxically the most powerful sources of great power preferences are the least globalized elements of their economies Testing this revisionist model of global regulatory governance on an unusually wide variety of cases including the Internet finance genetically modified organisms and intellectual property rights Drezner shows why there is such disparity in the strength of international regulations
