Processes Of Recovery From Neural Trauma:

Processes of Recovery from Neural Trauma Gad M. Gilad, Alfredo Gorio, Georg W. Kreutzberg, 1986 **Processes of Recovery from Neural Trauma** Gad M. Gilad, Alfredo Gorio, G.W. Kreutzberg, 1986-03-01 The book on Processes of Recovery from Neural Trauma contains the proceedings of an international symposium which was sponsored by the Weizmann Institute of Science and was held in June 1984 in Israel One of the central problems in neurobiology and clinical neurology are the processes which underlie the ability of the nervous system to recover from damage Neurons of the mammalian nervous system cannot be replaced once the generative embryonic period has ended Thus recovery after trauma is limited by the degree to which regeneration of damaged neural processes is possible and by the capacity of uninjured neurons to form new synaptic contacts or to use their existing ones more effectively The lack of successful axon regeneration in the central nervous system is the reason for the permanent damage and the very limited recovery of function seen in victims of traumatic injury Over the past few years research on neural trauma has witnessed significant progress resulting from interdisciplinary research carried out in an increasing number of laboratories throughout the world Accordingly the book includes reports on the progress made in the forefront of research in this field We hope that in addition to being a source of new information readers of the book will be stimulated to work and to generate new ideas and research strategies in this field of research *Brain Injury Medicine* Nathan D.
