MANAGING NATURAL RESOURCES HARIKESH N. MISRA, 2014-03-13

Natural resource management and sustainable development has of late assumed great importance especially because of ecological crisis and environmental dangers which are looming large. Today the issues related to natural resource exploitation, consequences, their conservation, preservation and management leading to sustainable development have become the major thrust areas of teaching and research. Also sustainability of natural resources especially water and land resources and their efficient use is one of the core programmes of Government of India's Twelfth Five Year Plan 2012-2017. For strategic development this objective can only be achieved if the resources are used judiciously. Although land and water resources the focus of the present book are vital for human survival and development unfortunately both are under threat and are increasing strain worldwide. These resources have wide and significantly varying implications in rural and urban settlements especially in India where population has been continuously growing and therefore the demand of land and water is intensifying. This has necessitated urgent need for reviewing the availability of land and water resources and their conservation. Besides dealing with the theoretical aspects this compendium presents case studies on natural resources as well which reveal ground realities at micro and meso levels too. Pedagogical features like maps, diagrams, satellite imageries and latest database of the primary and secondary nature distinguish this book from other works on the subject. The book will be of immense use to postgraduate students and research scholars of geography and related disciplines such as rural urban studies and environmental science. The thematic approach of the book provides reasonably good contents for cogitation to researchers. Policy makers, planners and academicians may also be benefitted while framing futuristic norms which may lead to sustainable development, the ultimate goal.

AUDIENCE: Postgraduate students and Research Scholars of Geography, Policy makers, Planners and Academicians.

Reforming Institutions in Water Resource Management Lin Crase, Vasant P. Gandhi, 2009-09-02

As water scarcities increase, nations throughout the world are in search of better institutions to manage water resources. India has been making substantial efforts to develop its water management systems since independence and significant increases in irrigated agriculture have taken place through both public and private initiatives. However, scarcities are increasing and major problems presently confront the management of water resources and irrigated agriculture. Resolving these problems is crucial for the future. The main purpose of this book is to provide a new approach for the analysis and design of water institutions that govern the use and development of water resources particularly for agriculture which is the largest user. Drawing on the theory of New Institutional Economics and comparisons with Australia as a developed country and other less developed nations in Africa and Asia, the authors present original empirical data from three Indian states. Detailed analysis of these data is used to identify and recommend attributes and features of water management institutions that are conducive to effective resource management, its long term success and its best contribution to development.

RURAL WATER SUPPLY MANAGEMENT: A STUDY IN SOUTHERN PART OF ASSAM Dr. R. J. Dutta

Chowdhury ,Dr. Debomalya Ghose ,2022-05-25 **Water Resource Management in South Asia** Anjal Prakash,2022-05-29

This cluster of books presents innovative and nuanced knowledge on water resources based on detailed case studies from South Asia India Bangladesh Bhutan Nepal Pakistan and Sri Lanka In providing comprehensive analyses of the existing economic demographic and ideological contexts in which water policies are framed and implemented the volumes argue for alternative informed and integrated approaches towards efficient management and equitable distribution of water These also explore the globalization of water governance in the region particularly in relation to new paradigms of neoliberalism civil society participation integrated water resource management IWRM public private partnerships privatization and gender mainstreaming These volumes will be indispensable for scholars and students of development studies environmental studies natural resource management governance and public administration particularly those working on water resources in South Asia They will also be useful for policymakers and governmental and non governmental organizations Integrated River

Basin Management through Decentralization Karin Kemper,William Blomquist,Ariel Dinar,2007-02-17 Drawing upon a worldwide survey of river basin organizations and in depth studies of eight river basins in a variety of locations around the globe this book examines how institutional arrangements for managing water resources at the river basin level have been designed and implemented what the impetus for these arrangements has been and what institutional features appear to be associated with greater or lesser success in river basin management Water Policy Entrepreneurs Sander Meijerink,2009

Unsurpassed in the scope of its coverage this book explores like no other the roles of policy entrepreneurs and the causes of policy change across diverse political systems ranging from the developing world to the largest western democracies The studies show how entrepreneurs work with outside donors take advantage of windows of political opportunity create those windows and push the policy process in the direction they hope They also show the limits to these strategies and strategies that tend to fail The book dramatically advances our understanding not only of change and stability in water policy but of the policy process more generally Frank R Baumgartner University of North Carolina US This book is a theoretically and empirically grounded analysis of one of the world's most pressing problems the management of water resources The editors have assembled a remarkable collection of authors with a truly global outlook and an excellent grasp of contemporary water issues as well as modern theories of public policy and decision making The volume also demonstrates excellent applications of policy theory to current and pressing matters It is a must read for students and practitioners in water resources and will be influential to water policy and in environmental resource management and policy for years to come Thomas A Birkland North Carolina State University US This volume is a major achievement It advances our knowledge of stability and change in water policy through case studies from around the world Its focus on transitions instances of really major shifts in policy is particularly welcome at a time when challenges such as climate change force water policy makers to reconsider the very foundations of their regulatory frameworks and infrastructural policies The volume goes beyond water policy however It

makes a major contribution to the study of policy dynamics in general by offering an empirically grounded comparative analysis of policy entrepreneurs as change agents in policy networks There has been much loose talk about policy entrepreneurs in the fields of public administration and public policy but a dearth of empirical work underpinning the various claims made This volume goes a long way towards filling that gap Highly recommended for water experts and policy scientists alike Paul t Hart Australian National University Australia and Utrecht University the Netherlands This major volume focuses on the role of policy entrepreneurs in revolutionizing water management worldwide Adopting an international comparative perspective the authors explore the changes taking place in water policy across fifteen countries at both the global level and within the European Union Their analysis highlights the importance of groups and individuals in stimulating progress and reveals the crucial part played by policy entrepreneurs Successful entrepreneurs use various strategies to initiate and implement change including the framing and reframing of issues the assembly of coalitions venue shopping and the exploitation of windows of opportunity In showcasing the role of entrepreneurs in achieving transitions and explaining their approach this groundbreaking book presents an optimistic message for those who desire improvements in the way water is managed This book will not only make a unique contribution to the current literature on transition management but will also prove an invaluable tool for those keen to influence water policy management at the regional national and international level It will be of great interest to students and scholars of water resources and environmental management and governance as well as practitioners in the fields of water and climate policy

Indian Water Policy at the Crossroads: Resources, Technology and Reforms Vishal Narain, Annasamy Narayanamoorthy, 2016-01-12 This book reviews and analyzes emerging challenges in water policy governance and institutions in India Recent times have seen the contours of water policy shaped by new discourses and narratives there has been a pluralization of the state and a changing balance of power among the actors who influence the formulation of water policy Discourses on gender mainstreaming and Integrated Water Resource Management IWRM are influential though they have often remained rhetorical and difficult to put into practice Debate over property rights reform and inter linking of rivers has been polarized At the same time there has been a rising disenchantment with policy initiatives in participatory irrigation management cleaning up of water bodies and pollution control Fast depletion of groundwater resources and the importance of adopting new irrigation methods are getting increased focus in the recent policy dialogue The contributors review current debate on these and other subjects shaping the governance of water resources and take stock of new policy developments The book examines the experience of policy implementation and shows where important weaknesses still lie The authors present a roadmap for the future and discuss the potential of alternative approaches for tackling emerging challenges A case is made for greater emphasis on a discursive analysis of water policy to examine underlying policy processes The contributors observe that the ongoing democratization of water governance coupled with the multiplication of stresses on water will create a more visible demand for platforms for

negotiation conflict resolution and dialogue across different categories of users and uses Finally the authors propose that future research should challenge implicit biases in water resources planning and address imbalances in the allocation of water from the perspectives of both equity and sustainability

Capacity Development for Improved Water Management
Maarten Blokland, Guy Alaerts, Judith Kaspersma, Matt Hare, 2011-03-03 This collection of papers explains how knowledge and capacity development can contribute to improved effective water management with a digest of lessons learned in the areas of development of tools and techniques field applications and evaluation The authors are prominent practitioners capacity builders and academics within the water and capacity development sectors Capacity Development for Improved Water Management starts with an introduction and overview of progress and challenges in knowledge and capacity development in the water sector The next part presents tools and techniques that are being used in knowledge and capacity development in response to the prevailing challenges in the water sector and a review of experience with capacity change in other sectors In the third part a number of cases are presented that cover knowledge and capacity development experiences in the water resources and water services sectors This part also presents experiences on water education for children and on developing gender equity The fourth part provides experiences with the monitoring and evaluation of knowledge and capacity building
