Thunder in the Deep Joe Buff,2008-12-10 In his electrifying first novel Joe Buff instantly established himself as the ultimate chronicler of 21st century warfare by taking military fiction and submarine combat to a new level of authenticity vision and power Thunder in the Deep picks up where Deep Sound Channel left off bringing to life a frightening seascape where technology pushes warriors to new extremes and warriors push technology to the max This time the difference between victory and defeat hinges on the two most advanced nuclear attack submarines in the world The Challenger is the weapon of the future a ceramic hulled nuclear attack submarine whose electronic eyes and ears are the most advanced ever

created It is commanded by acting captain Jeffrey Fuller a former SEAL turned submariner whose aggressiveness has made him a rising star and sometimes scares the hell out of his crew Fuller s mission is to rescue the Virginia class fast attack sub Texas now lying on the bottom of the Atlantic just off the Azores But the enemy a newly resurrected and fanatically militaristic Germany knows where the Texas is too and knows the Challenger is coming It is Challenger the Germans want dispatching their own high tech supersub the Deutschland to destroy her In this war your enemy is a blip on a console hardwired into an integrated nuclear weapons system Ships are vaporized off the surface of the sea nuclear shock waves unleash deadly tsunami waves and smart submarines do battle with smart aircraft sent to hunt them down For Jeffrey Fuller and the Challenger for the men on board the Deutschland the race beneath the ocean s surface across a horrific underwater war zone will demand every bit of courage and skill they can muster just to survive Before it s over the Challenger s mission is radically redefined Fuller his SEALs and freedom fighter Ilse Reebeck are sent into Germany itself to plant a nuke right in the gut of the enemy s power structure Thunder in the Deep plunges the reader into the middle of some of the fiercest and most thrilling depictions of underwater warfare ever written It is an electrifying novel of military strategy and action a powerful tale of technology and humanity that will have you breathlessly turning pages until the explosive climax

The Fourth Source Robert J. Tuttle, 2012 This book describes how the effects of nature s own nuclear reactors have shaped the Earth the Solar System the Universe and the history of life as we know it It focuses on observed effects that are poorly explained by our standard theories identifies certain errors in those theories and shows how these effects are caused by natural nuclear fission reactors The theory of Plate Tectonics is wrong and it is shown that expansion of the Earth causes continental drift A physically reasonable mechanism is proposed for expansion and observational data are presented to show that this occurs Evolution is explained as punctuated equilibrium with mutations caused by abrupt surges of radiation and related life forms that have been interpreted as separate species are actually the result of radiation injury This view is particularly effective as applied to humans The ability of the dinosaurs to live so large is explained by use of Earth Expansion and a more massive atmosphere to provide buoyancy and effective transpiration of oxygen These effects also explain how pterodactyls and ancient birds could fly Expansion induced by impacts at the end of the Cretaceous caused the atmosphere to thin and the dinosaurs collapsed Analysis of geological and biological data supports this The astronomical distance scale is shown to be wrong based on the misconception that trigonometric parallax is an absolute measurement It isn t and the method is led astray by the overwhelming number of asteroidal fragments masquerading as stars The measurements of an expanding Universe are shown to be in error and an expanding Universe is not needed by an alternative interpretation of Einstein s equations This interpretation is based on the equal creation of matter and antimatter which is known to occur Spiral galaxies are not vast Island Universes of stars as we have thought but are shown to be the strewn fields of debris from the nuclear fission detonation of distant planets The Universe is not made up of 96% Dark Matter and Dark Energy but is

instead very ordinary Abundant evidence and references provide support for all these interpretations This book opens new opportunities for research by correcting several fundamental errors in our concepts of the Earth Life and the Universe

Ocean Realm ,1996 Deep Sound Channel Joe Buff,2008-12-10 An electrifying new voice in military fiction Joe Buff has written a riveting and totally realistic tale of military adventure a spectacular novel that is sure to establish this outstanding author as the new master of the genre Vividly authentic and impeccably researched it takes readers into the not too distant future when the United States is embroiled in a tactical nuclear war that will mark a new era of weapons and tactics geopolitical alignments and human courage Deep Sound Channel The year is 2011 and in South Africa a reactionary coup has established a military government that has begun sinking U S and British merchant ships NATO quickly responds with only Germany holding back until Germany starts nuking Poland and eviscerating the French Now the South Atlantic is a battleground where nuclear tipped missiles rule and the only gun worth using is one that seeks and fires from deep beneath the sea In response Lieutenant Commander Jeffrey Fuller and the crew of the nuclear submarine USS Challenger are called in to help Ceramic hulled and designed for maximum stealth the Challenger is being sent to South Africa for a mission critical to stopping the war Together with a team of Navy SEALs and assisted by Boer freedom fighter Ilse Reebeck Commander Fuller must infiltrate the enemy coast and attack a compound where scientists are putting together the ultimate biological weapon a violent deadly microbe that has the potential to wreak global devastation For Jeffrey Fuller the operation will take him back to his former life as a SEAL It s his job to steer the team of operatives to shore penetrate concentric arcs of armaments minefields and sensors and destroy the death lab If the mission works the bioweapon will be destroyed and shock waves will cripple the South African government If it goes wrong fallout will kill thousands of innocent people Deep Sound Channel provides a rare and telling look into the future of our military s weapons and into the horrific violence of tactical nuclear war It is a cutting edge masterpiece that takes readers on a wild and unforgettable ride of suspense nuclear warfare and underwater adventure Standard Catalog for High School Libraries H.W.
