Marine Radioactivity:

Marine Radioactivity, 2004-09-17 This book on Marine Radioactivity sets out to cover most of the aspects of marine radioactivity which have been the focus of scientific study in recent decades. The authors and their reviews divide into topic areas which have defined the field over its history. They cover the suite of natural radioisotopes which have been present in the oceans since their formation and quantitatively dominate the inventory of radioactivity in the oceans. Also addressed are the suite of artificial radionuclides introduced to the oceans as a consequence of the use of the atom for development of nuclear energy, nuclear weapons and various applications of nuclear science. The major source of these continues to derive from the global fallout of atmospheric tests of nuclear weapons in the 1950s and 1960s but also includes both planned and accidental releases of radioactivity from both civilian and military nuclear technology. The other division of the major study direction depends on whether the objective is to use the radionuclides as powerful tools to study oceanic processes to describe and understand the ocean distribution of the various natural or artificial radionuclides or to assess the different radionuclides impact on and pathways to man or marine organisms. The oceans cover 70% of the Earth's surface and thus contains a corresponding large share of the Earth's radioactivity. Marine Radioactivity covers topics of recent scientific study in this young field. It examines both natural radioactivity (radioactivity naturally present in oceans since their formation) and artificial radioactivity (radioactivity introduced by man and use of atomic and nuclear energy with regard to possible effects on the global environment).

Radioactivity in the Marine Environment M. Waldichuk, 1971 *Worldwide Marine Radioactivity Studies (WOMARS)* International Atomic Energy Agency, 2005 This publication summarizes the results of a Coordinated Research Project carried out by the IAEA's Marine Environment Laboratory in Monaco. The results obtained confirm that the dominant source of anthropogenic radionuclides in the marine environment is global fallout; however, important contributions have also been due to authorized releases of radionuclides to the marine environment from the Sellafield and Cap de la Hague reprocessing plants as well as from the Chernobyl accident. Time trends in radionuclide concentrations in surface water were studied and radionuclide mean residence times in the world oceans were estimated. Similar mean residence times were obtained for ^{90}Sr and ^{137}Cs (28.3 years and 13.1 year) for $^{239+240}\text{Pu}$. The results provide the most complete data set available to Member States on levels of anthropogenic radionuclides in the marine environment. They are used as the international reference source on the average levels of anthropogenic radionuclides in the marine environment so that any further contributions from nuclear reprocessing plants, radioactive waste disposal sites, nuclear bomb test sites and possible nuclear accidents can be identified.

Modelling the Dispersion of Radionuclides in the Marine Environment Raúl Perriñez, 2005-03-07 This guide details the techniques and numerical procedures required for numerical modelling of radioactivity dispersion in marine environments. The book goes beyond the basics of hydrodynamic modeling to analyze the latest trends in modeling.

Radiation Status in the Marine World Manoj Kumar Jindal, Amala

David, Mayeen Uddin Khandaker, 2025-02-25 Natural radiation is omnipresent everywhere on the earth and humans cannot avoid it Natural radiation is a critical aspect in understanding the health issue and predicting the existence of radionuclides Because the ocean is the source of all materials and due to the fact that water from everywhere is submerged in the ocean through river networks the ocean will contain varying radiation doses in every site This book has information about radiation status near the ocean in all areas on Earth There are five oceans namely the Atlantic Pacific Indian Arctic and Antarctic Oceans This book is a valuable resource of its kind for indicating the radiation status in all types of oceans The outcomes of this book are extremely valuable to people in a variety of fields including health sciences material sciences radiological fields environmental science oceanology water world and so on

Coastal and Marine Pollution Meththika Vithanage, Sameera M. Samarasekara, Bryan D. James, Christopher M. Reddy, 2025-03-21 A multi faceted analysis of how to preserve the long term health of the world s largest ecosystem In Coastal and Marine Pollution Source to Sink Mitigation and Management a team of distinguished researchers delivers a comprehensive overview of the factors and stakeholders impacting and impacted by coastal and marine pollution The book offers broad and up to date coverage of the topic serving as a valuable reference for professionals and researchers working in the field The authors integrate and compare the two main sources of marine and coastal pollution chronic long term low level pollution as well as occasional accidental disaster related pollution They bridge the gap between theory and real world action offering best practices for monitoring and preventing pollution as well as efficient governance and disaster management strategies Readers will find A thorough overview of the global state of coastal and marine pollution Comprehensive explorations of different types of pollution including their sources distribution and impacts on the biophysical environment Practical discussions of pollution monitoring methods including ecotoxicological approaches and proven strategies for managing coastal and marine pollution A critical assessment of policy and governance issues including public awareness and disaster response strategies Perfect for researchers and professionals in the fields of marine biology ecology and environmental protection Coastal and Marine Pollution will also benefit professionals working in the shipping fishing deep sea mining and drilling industries as well as those affiliated with governmental and non governmental organizations
