Marine Conservation G. Carleton Ray, Jerry McCormick-Ray, 2013-10-11 Providing a guide for marine conservation practice Marine Conservation takes a whole systems approach covering major advances in marine ecosystem understanding Its premise is that conservation must be informed by the natural histories of organisms together with the hierarchy of scale related linkages and ecosystem processes The authors introduce a broad range of overlapping issues and the conservation mechanisms that have been devised to achieve marine conservation goals The book provides students and conservation practitioners with a framework for thoughtful critical thinking in order to incite innovation in the 21st century Marine Conservation presents a scholarly but eminently readable case for the necessity of a systems approach to conserving the oceans combining superb introductions to the science law and policy frameworks with carefully chosen case studies This superb volume is a must for anyone interested in marine conservation from students and practitioners to lay readers and policy makers Simon Levin George M Moffett Professor of Biology Department of Ecology Evolutionary Biology Princeton University

Coastal-Marine Conservation G. Carleton Ray, Jerry McCormick-Ray, 2009-04-01 Coastal Marine Conservation Science and Policy introduces students and managers to complex conservation and management issues facing coastal nations of the world their citizens and international and non governmental organizations It aims to reduce complexity and inspire a greater consensus for more effective conservation action Presents the coastal realm as a heterogeneous diverse ecosystem of exceptional high biological diversity and productivity and where conservation challenges are most difficult and urgent Examines the critical issues facing coastal marine conservation and the mechanisms for dealing with them Reviews the basic science required for addressing conservation issues by presenting the coastal realm as a land sea ecosystem of global significance and by reviewing the natural history features of coastal marine organisms Presents three ecologically and latitudinally distinct real world case studies to create a context for understanding of regional systems their cultures and their conservation the polar Bering Sea the temperate Chesapeake Bay and the tropical Bahamas Makes apparent the ecological stresses on the coastal realm increasing rates of ecosystem change loss of ecosystem health and fragmented governance Synthesizes the major challenges for conservation and suggests future policy and management strategies including ecosystem management and needs for achieving sustainability and addressing the environmental debt This book is intended for undergraduates and graduates taking courses in coastal and marine conservation and management as well as those actively engaged in coastal marine conservation activities and gives the reader a clear steer to future management approaches References additional to those in the book are available at http://www.blackwellpublishing.com/pdf/ray_references.pdf The artwork is available to download at <http://www.blackwellpublishing.com/ray>

Marine Policy Mark Zacharias, 2014-03-14 This textbook provides the reader with a foundation in policy development

and analysis and describes how policy including legal mechanisms is applied to marine environments around the world. It offers a systematic treatment of all aspects of marine policy including environmental protection, fisheries, transportation, energy, mining, and climate change. It starts with a biophysical overview of the structure and function of the marine environment with a particular emphasis on the challenges and opportunities of managing the marine environment. An overview of the creation and function of international law is then provided with a focus on international marine law. It explores the geographic and jurisdictional dimensions of marine policy as well as the current and anticipated challenges facing marine systems including climate change related impacts and resource over exploitation. The book should appeal to senior undergraduate and graduate students and form a core part of the curriculum for marine affairs, science, and policy courses. It will also provide supplementary reading for students taking a course in the law of the oceans but is not aimed at legal specialists.

Emerging Perspectives on the Law, Science, & Policy of Dynamic Marine Conservation, 2014 **Citizen**

Science for Coastal and Marine Conservation John A. Cigliano, Heidi L. Ballard, 2017-10-31. In recent years, citizen science has emerged as a powerful new concept to enable the general public, students, and volunteers to become involved in scientific research. A prime example is in biodiversity conservation where data collection and monitoring can be greatly enhanced through citizen participation. This is the first book to provide much needed guidance and case studies from marine and coastal conservation. The novelty and rapid expansion of the field has created a demand for the discussion of key issues and the development of best practices. The book demonstrates the utility and feasibility as well as limitations of using marine and coastal citizen science for conservation and by providing critical considerations, i.e. which questions and systems are best suited for citizen science, presents recommendations for best practices for successful marine and coastal citizen science projects. A range of case studies, for example, on monitoring of seabird populations, invasive species, plastics pollution, and the impacts of climate change from different parts of the world is included. Also included are discussions on engaging youth, indigenous communities, and divers and snorkelers as citizen scientists, as well as best practices on communication within citizen science, building trust with stakeholders, and informing marine policy as part of this exciting and empowering way of improving marine and coastal conservation.

ICYMARE - Early Career Researchers in Marine Science Simon Jungblut, Carolin Müller, Lena Rölfer, Yvonne Schadewell, 2025-06-05. The International Conference for Young Marine Researchers (ICYMARE) is a recently founded bottom-up driven networking initiative. ICYMARE conducts an annual on-site conference event as well as a monthly Online Forum to foster international exchange and networking among marine early career researchers. In both cases, on-site conference and Online Forum, the early careers organize and conduct the whole event but also identify the conference topics and prepare and moderate their topical sessions. This Research Topic aims to feature articles authored by early career researchers who were involved as a conference or Online Forum session hosts in the ICYMARE initiative. As emerging experts in their respective fields of marine science, they are invited to contribute, review,

articles on specific topics within the topical frame of their ICYMARE conference session Thus articles on this Research Topic may come from all fields of marine sciences as it reflects the scope of the ICYMARE conferences 5th International Marine Conservation Congress E. De Santo, 2024-07-10 This book presents a novel examination of Marine Protected Areas within a security context bridging science policy and geopolitics and addressing the often under emphasized aspect of environmental justice The book argues that Marine Protected Areas MPAs are not only a critical tool for protecting marine biodiversity in a changing climate but they also play an important role at the intersection of geopolitics and environmental justice and they provide a case study of environmental governance at the science policy interface The book takes an interdisciplinary and critical approach and builds on the author s two decades of experience working in this field Geopolitically it explores the ways in which MPAs provide footprints for influence and access to resources far from home for nations with overseas territories MPAs also raise important issues connected to equity environmental justice and social justice including access to resources and participation in environmental decision making processes key aspects for achieving long term conservation goals The book also demonstrates how MPAs are a critical lens for understanding how policy makers cope with scientific uncertainty and the necessity of well designed and precautionary science advisory processes While the ecological contribution of MPAs is paramount social issues and geopolitical considerations are often less obvious in the discourse underpinning MPAs and the resulting tensions can undermine long term conservation objectives By applying the three lenses of geopolitics environmental justice and science this book provides key insights to help the international community moving past the 2030 biodiversity targets and beyond towards a future of meaningful equitable and effective conservation approaches This book will be of great interest to students and scholars of biodiversity conservation marine studies political geography environmental governance and science policy studies It will also be of interest to marine conservation governance professionals and policymakers *Offshore Energy and Marine Spatial Planning* Katherine L. Yates, Corey J. A. Bradshaw, 2018-03-29 The generation of offshore energy is a rapidly growing sector competing for space in an already busy seascape This book brings together the ecological economic and social implications of the spatial conflict this growth entails Covering all energy generation types wind wave tidal oil and gas it explores the direct and indirect impacts the growth of offshore energy generation has on both the marine environment and the existing uses of marine space Chapters explore main issues associated with offshore energy such as the displacement of existing activities and the negative impacts it can have on marine species and ecosystems Chapters also discuss how the growth of offshore energy generation presents new opportunities for collaboration and co location with other sectors for example the co location of wild capture fisheries and wind farms The book integrates these issues and opportunities and demonstrates the importance of holistic marine spatial planning for optimising the location of offshore energy generation sites It highlights the importance of stakeholder engagement in these planning processes and the role of integrated governance with illustrative case studies from the United States United Kingdom northern Europe and the Mediterranean It also discusses trade off analysis and

decision theory and provides a range of tools and best practices to inform future planning processes
