

MARINE PROTECTED AREAS

SMART INVESTMENTS IN OCEAN HEALTH

MPAs ARE AN ESSENTIAL TOOL FOR THE RECOVERY AND PROTECTION OF OUR OCEAN AND THE VITAL SERVICES IT PROVIDES, BUT DO THEY MAKE ECONOMIC SENSE?

THE STUDY

A NEW STUDY EXPLORES THE BENEFITS OF MARINE PROTECTED AREA (MPA) EXPANSION BASED ON 6 EXPLORATORY SCENARIOS AND EXAMINES WHETHER AN ECONOMIC CASE CAN BE MADE GLOBALLY FOR EXPANSION OF MPAs.

Marine Protected Areas And Ocean Conservation:

Marine Protected Areas and Ocean Conservation Tundi S. Agardy, 1997-03-20 This book reviews the need for marine conservation summarizes general measures for ocean and coastal conservation and explains the rationale for establishing marine protected areas The second half of the book is essentially a guideline for designing and implementing protected areas in order to make them viable and long lasting in their effectiveness Marine Protected Areas National Research Council, Commission on Geosciences, Environment, and Resources, Ocean Studies Board, Committee on the Evaluation, Design, and Monitoring of Marine Reserves and Protected Areas in the United States, 2001-06-01 Although the ocean and the resources within seem limitless there is clear evidence that human impacts such as overfishing habitat destruction and pollution disrupt marine ecosystems and threaten the long term productivity of the seas Declining yields in many fisheries and decay of treasured marine habitats such as coral reefs has heightened interest in establishing a comprehensive system of marine protected areas MPAs areas designated for special protection to enhance the management of marine resources Therefore there is an urgent need to evaluate how MPAs can be employed in the United States and internationally as tools to support specific conservation needs of marine and coastal waters Marine Protected Areas compares conventional management of marine resources with proposals to augment these management strategies with a system of protected areas The volume argues that implementation of MPAs should be incremental and adaptive through the design of areas not only to conserve resources but also to help us learn how to manage marine species more effectively Global ocean protection : present status and future possibilities , 2010 This publication provides a much needed and timely tool to assist us in our collective effort to find new and better solutions to address the various threats to our marine biological diversity and productivity It provides evidence based recommendations on improving and accelerating actions on delivering ocean protection and management through marine protected areas and facilitates the sharing of experiences and lessons learned

Page 4 Marine Protected Areas National Research Council, Commission on Geosciences, Environment, and Resources, Ocean Studies Board, Committee on the Evaluation, Design, and Monitoring of Marine Reserves and Protected Areas in the United States, 2001-05-01 Although the ocean and the resources within seem limitless there is clear evidence that human impacts such as overfishing habitat destruction and pollution disrupt marine ecosystems and threaten the long term productivity of the seas Declining yields in many fisheries and decay of treasured marine habitats such as coral reefs has heightened interest in establishing a comprehensive system of marine protected areas MPAs areas designated for special protection to enhance the management of marine resources Therefore there is an urgent need to evaluate how MPAs can be employed in the United States and internationally as tools to support specific conservation needs of marine and coastal waters Marine Protected Areas compares conventional management of marine resources with proposals to augment these management strategies with a system of protected areas The volume argues that implementation of MPAs should be

incremental and adaptive through the design of areas not only to conserve resources but also to help us learn how to manage marine species more effectively Marine Protected Areas: An Overview Harold Frank Upton, 2007 Marine Protected Areas Susan Gubbay, 1995-07-31 Marine protected areas MPAs have an important role in marine conservation programmes around the world Although most have been established relatively recently when compared with protected areas on land there is considerable expertise on their identification setting up and management Some techniques have been adapted from those used on land Others are novel and unique to marine conservation The chapters in this book give an insight into this fast developing field where experiment and innovation work alongside techniques which have been tried and tested The guiding principles behind key stages in the setting up and management of MPAs are described and case studies illustrate how they have worked While it is most encouraging to read about the successes the case studies also point to difficulties which have been encountered Not all of the examples are new or recent but together they illustrate what is happening in this field

Management of Marine Protected Areas Paul D. Goriup, 2017-01-23 With the health of the world's oceans threatened as never before it is becoming increasingly apparent that Marine Protected Areas MPAs play a vitally important role in protecting marine and coastal habitats Management of Marine Protected Areas A Network Perspective draws on the results of a major EU sponsored research project related to the establishment of networks of MPAs in the Mediterranean and Black Seas that transpired from February 2011 to January 2016 Featuring contributions by leading university and national research institute based scientists chapters utilize the latest research data and developments in marine conservation policy to explore issues related to ways in which networks of MPAs may amplify the effectiveness and conservation benefits of individual areas within them Topics addressed include the broader socio economic impacts of MPAs in the Mediterranean and Black Seas the use of Marine Spatial Planning MSP to resolve conflicts between marine resource use and protection special protection measures under the EU's Marine Strategy Framework Directive MSFD ecological value assessments in the Black Sea the Ecosystem Approach EA for managing marine ecosystems MPAs along Turkey's Black Sea coast MPAs and offshore wind farms and managing and monitoring MPA networks within and between the Black and Mediterranean Seas Timely and important Management of Marine Protected Areas A Network Perspective offers invaluable insights into the role of MPAs in preserving the welfare and long term viability of our world's oceans *Guidelines for Marine Protected Areas* IUCN World Commission on Protected Areas, 1999 The world urgently needs a comprehensive system of Marine Protected Areas MPAs to conserve biodiversity and to help rebuild the productivity of the oceans The aim of these Guidelines is to help countries establish systems of MPAs as a key component of integrated management of coastal and marine areas and as part of their sustainable development The various actions to make an effective MPA are set out from early planning stages to implementation **Guidelines for Establishing Marine Protected Areas** Graeme Kelleher, 1992 Marine Protected Areas in Southeast Asia Catherine P. S. Cheung, 2002 Marine protected areas in SE Asia were assessed and reviewed to

analyze the increasing threats such as coastal development collecting of endangered species ornamental trading over exploitation pollution and tourism that lead to the depletion of the biodiversity resources of the marine protected areas in the region *Marine Protected Areas*, 2007 Some Members of Congress among many others are interested in considering limiting human activity in some areas of the marine environment as one response to mounting evidence of deteriorating conditions and declining populations of living resources The purposes of proposed additional limits would be to both stem the decline and permit the rehabilitation of these environments and populations One method of implementing this concept is to designate areas where activity would be limited often referred to as marine protected areas MPAs Translating the MPA approach into a national program however requires resolution of many economic ecological and social debates The complexity of creating a program is compounded by controversy over the uses that would be allowed curtailed or prohibited in MPAs the purposes of a system of MPAs and the location size and distribution of MPA units One possible way to get past some of these complexities is to think of MPA designations as a form of zoning in the ocean Experiences in using the MPA designation in other countries may be instructive However questions have been raised about the effectiveness of administration and enforcement and about changes in living resources at some of these sites Although the MPA designation has not been used widely in the United States numerous marine sites have been designated by federal and state governments for some kind of protection Perhaps the best known federal sites are units in the National Marine Sanctuary Program The Bush Administration has supported the MPA concept It designated the Northwestern Hawaiian Islands Marine National Monument in 2006 as the world's largest MPA and has supported the activities of the National Marine Protected Areas Center in the National Oceanic and Atmospheric Administration It has continued most of the Clinton Administration initiatives to coordinate protection of marine resources at designated sites including implementation of Executive Order 13158 issued in May 2000 which endorsed establishing and strengthening a comprehensive system of MPAs Additional actions by Congress would be needed to create a system that could be characterized as integrated or comprehensive Recent reports from the Pew Oceans Commission and the U S Commission on Ocean Policy endorsed the MPA concept Some issues that would likely be raised in any congressional discussions include whether new legislation is desired or needed what the basic characteristics of units in any MPA system should be how MPAs might be used to resolve use conflicts and whether adequate funding would be authorized and appropriated to both enforce the protected status and monitor and evaluate the ecological and social impacts of MPAs Earlier Congresses examined the concepts behind MPAs and experiences with protected areas as they considered appropriations and proposals to reauthorize coastal and marine resource protection laws However Congress has not authorized new MPA related activities although it addressed fishing access when it reauthorized the Magnuson Stevens Fishery Conservation and Management Act near the end of the 109th Congress The 110th Congress is likely to continue considering these topics This report will be updated as events warrant **Guidelines for Establishing**

Marine Protected Areas Graeme Kelleher, R. A. Kenchington, Great Barrier Reef Marine Park Authority, 1992

Conserving the Oceans Justin Alger, 2021 Conserving the Oceans documents a paradigm shift in global ocean conservation towards large marine protected areas MPAs that began in 2006 leading to millions of square kilometres of newly protected ocean space The book reconciles how states have committed to these ambitious new protections while still being highly responsive to the interests of businesses From the commercial fishing sector to ecotourism businesses heavily influence conservation policy occasionally leading to robust protections but more often than not to business as usual activity on the water Ultimately the book questions if we are still doing too little to prevent the worst impacts of the global environmental crisis despite the paradigm shift in global ocean conservation

Establishing Marine Protected Area Networks IUCN World Commission on Protected Areas, 2008 Marine Protected Areas OECD, 2017 Intense exploitation of our oceans and seas is degrading marine biodiversity and ecosystems at an alarming rate This report presents good practice insights for effectively managing marine protected areas MPAs one of the policy instruments available for the conservation and sustainable use of marine biodiversity and ecosystems While global coverage of MPAs has been increasing over the past two decades further efforts are required to meet the target under the Sustainable Development Goals and to ensure they are effective Drawing on the literature and numerous examples from developed and developing countries this book highlights how the environmental and cost effectiveness of MPAs can be enhanced It covers issues including the benefits and costs of MPAs the need for more strategic siting of MPAs monitoring and compliance sustainable finance for MPAs and the need to embed these in a wider policy mix so as to address the multiple pressures on marine ecosystems

Fisheries Management, 2011 This document has been developed to provide information and guidance on the use of marine protected areas MPAs in the context of fisheries As MPA implementation moves ahead in the arena of marine biodiversity conservation many people feel that the fisheries aspects are not fully understood nor always appropriately taken into account and that guidance specific to this sector is needed These Guidelines look specifically at fisheries features of MPAs but also address the interface between fisheries management and biodiversity conservation and provide support for MPAs with multiple objectives The Guidelines are divided into two sections the first discusses definitions and context and provides background information on fisheries management the ecosystem approach to fisheries EAF and MPAs as a tool for fisheries management including socio economic and biological impacts The second section considers the planning and implementing of MPAs including the institutional legal and policy context the planning process and actual implementation considerations Conclusions and future directions are offered in the last chapter of this section while a selection of annexes offers in depth information on a few key issues The document highlights the need for increased coordination across sectors and agencies departments Integration of diverse interests and viewpoints is required if we are to successfully manage our oceans and their resources for future generations As with all fisheries management good governance including adequate stakeholder participation is key to

successful and equitable management outcomes P 4 of cover *Marine protected areas* United States. Congress. House. Committee on Resources. Subcommittee on Fisheries Conservation, Wildlife, and Oceans,2002 **Marine Protected Areas Network in the South China Sea** Vu Hai Dang,2014-01-09 The once pristine and rich marine environment of the South China Sea is degrading at an alarming rate due to the rapid socioeconomic development of the region Despite this and due mainly to complicated sovereignty and maritime disputes coastal States have not been able to develop effective regional cooperation to safeguard the shared marine environment Marine Protected Areas Network in the South China Sea discusses legal and political measures to support the development of a network of marine protected areas in the South China Sea Such a network if properly developed would not only help to protect the marine environment and resources of the region but also contribute to decreasing the tension among its coastal States These measures are suggested in accordance with international law based on the specific geopolitical context of the South China Sea region and take into consideration experiences in developing regional networks of marine protected areas from other marine regions **Marine Conservation** G. Carleton Ray,Jerry McCormick-Ray,2013-12-31 Providing a guide for marine conservation practice Marine Conservation takes a whole systems approach covering major advances in marine ecosystem understanding Its premise is that conservation must be informed by the natural histories of organisms together with the hierarchy of scale related linkages and ecosystem processes The authors introduce a broad range of overlapping issues and the conservation mechanisms that have been devised to achieve marine conservation goals The book provides students and conservation practitioners with a framework for thoughtful critical thinking in order to incite innovation in the 21st century Marine Conservation presents a scholarly but eminently readable case for the necessity of a systems approach to conserving the oceans combining superb introductions to the science law and policy frameworks with carefully chosen case studies This superb volume is a must for anyone interested in marine conservation from students and practitioners to lay readers and policy makers Simon Levin George M Moffett Professor of Biology Department of Ecology Evolutionary Biology Princeton University Marine Protected Areas John Humphreys,Robert Clark,2019-10-18 Marine Protected Areas Science Policy and Management addresses a full spectrum of issues relating to Marine Protected Areas MPAs not currently available in any other single volume Chapters are contributed by a wide range of working specialists who examine conceptions and definitions of MPAs progress on the implementation of worldwide MPAs policy and legal variations across MPAs the general importance of coastal communities in implementation and the future of MPAs The book constructively elucidates conflicts issues approaches and solutions in a way that creates a balanced consideration of the nature of effective policy and management Those in theory designation implementation or management of MPAs from individuals marine sector organizations and university and research center libraries will find it an important work
