Marital Interaction Experimental Investigations:

Marital Interaction John Mordechai Gottman, 2013-10-22 Marital Interaction Experimental Investigations deals with experimental studies on marital interaction. Emphasis is on the importance of the role of description in the study of social interaction. Methods for the analysis of pattern and sequence including cross spectral time series analysis are also presented. Comprised of 15 chapters, this book begins with a historical review of several research traditions that have concerned themselves with families and marriages: the sociological tradition, the family therapy or systems tradition, the social learning tradition, and the developmental tradition. Research that points to the potential importance of the observation of consensual decision making processes is also reviewed. A model of marital interaction called the Structural Model, which can be used to predict changes in marital satisfaction, is described. Subsequent chapters focus on the Couples Interaction Scoring System, an observational system for categorizing marital interaction; modern concepts of the assessment of reliability, particularly the stringent assessment that is necessary for sequential analysis; differences between well functioning and poorly functioning marriages; couples interactional styles in terms of communication skill deficits; and the concept of an individual's social competence. This monograph will be of interest to psychologists engaged in research on marriage as well as sociologists and clinical researchers.

Personality, Social Skills, and Psychopathology David G. Gilbert, James J. Connolly, 2013-11-11 This book presents an introduction to the study of relationships among personality, social skills, and psychopathology. Although research findings during the last decade have made it clear that the relationships among these variables are almost always complex and multiply determined, many clinicians and theoreticians have not incorporated such complexities into their models of human behavior and therapeutic intervention. This discrepancy between clinical theory and research-based findings has been of special concern to us because we have been both empirically oriented academic researchers and practicing clinicians. It is our belief that clinical theory related to personality, social skills, and psychopathology can be enriched by research findings from a wide range of fields, from human genetics, temperament, and personality to family systems, affect, psychophysiology, and learning. This book is divided into an introductory chapter and three sections. The introductory chapter provides an overview of the issues in the field, compares models, and provides suggestions for further integration and articulation of concepts related to personality, social skills, and psychopathology. The book's first section presents state-of-the-art general models of interactions among personality, social skills, and psychopathology. Connolly opens this section with a chapter that reviews longitudinal findings indicating that personality traits predict the onset of psychopathology and marital distress. The etiology of these and related findings is the subject of other chapters in this section.

Handbook of Behavioural Family Therapy Ian R.H. Falloon,2015-07-30 First published in 1988 behavioural family therapists worked in an area that had greatly changed since its inception over 20 years before Growing out of the pioneering work of Gerald

Patterson Robert Paul Liberman and Richard Stuart whose backgrounds vary from psychology to psychiatry to social work behavioural family therapy BFT had evolved to encompass systems theory considerations of the therapeutic alliance as well as approaches to accounting for and restructuring family members subjective experiences through cognitive strategies As BFT had not been the brain child of any one charismatic innovator but rather of a wide array of clinicians and researchers developing and rigorously testing hypotheses it is fitting that this much needed summation of the field was a collaborative product of an array of well established practitioners of the time They discuss in Part 1 of the book the theoretical parameters of BFT focusing on modular behavioural strategies the indications for therapy assessment of family problems pertinent issues arising in clinical practice and approaches to the problem of resistance to change Contributors to Part 2 then apply theory to such clinical situations as parent training and helping families cope with patients suffering from developmental disabilities alcoholism schizophrenia senile dementia as well as anxiety obsessive compulsive and depressive disorders Specific attention is also given to acute inpatient and primary health care settings While BFT had already proved quite effective in treating a great number of family problems it was only in its infancy at the time of writing As Falloon says in his overview all exponents of the method are constantly involved with the process of refinement each clinician is a researcher each family member is a research subject and each researcher is contributing to clinical advancement This openness in combination with a willingness to modify sacred tenets of behaviourism while adapting proven techniques from other family therapies made this title a landmark in its field As such it was not only of interest to all clinicians and researchers with a behavioural slant but also to all family therapists who wished to challenge themselves to develop an integrative approach

Mothers and Their Adult Daughters Karen L. Fingerman, Ph.D, 2009-12-02 The mother daughter tie takes on unique characteristics as daughters enter midlife and mothers enter old age Incorporating vivid descriptions by mothers and daughters about their relationships this book addresses both the rewards and the difficulties mothers and daughters experience in maintaining their relationships into old age Based on interviews with 48 mothers over age 70 and their adult daughters Dr Fingerman begins with an overview of this relationship which she points out can be distinguished from other social ties by the strength of the mother daughter bond Next she discusses the positive features of this bond and various theories about its social and psychological nature This discussion is followed by an examination of problems encountered between mothers and daughters The last section looks at reactions of mothers and daughters to

tensions conflicts communication problems and other difficulties This excellent study will be of interest not only to researchers in women s and family studies but any mother and daughter *Advanced Social Psychology* Roy F.

Liebovitch,2018-06-07 This edited volume presents examples of social science research projects that employ new methods of quantitative analysis and mathematical modeling of social processes This book presents the fascinating areas of empirical and theoretical investigations that use formal mathematics in a way that is accessible for individuals lacking extensive expertise but still desiring to expand their scope of research methodology and add to their data analysis toolbox Mathematical Modeling of Social Relationships professes how mathematical modeling can help us understand the fundamental compelling and yet sometimes complicated concepts that arise in the social sciences This volume will appeal to upper level students and researchers in a broad area of fields within the social sciences as well as the disciplines of social psychology complex systems and applied mathematics **Observing Interaction** Roger Bakeman,John

M. Gottman,1997-03-13 Mothers and infants exchanging gleeful vocalizations married couples discussing their problems children playing birds courting and monkeys fighting have this in common their interactions with others unfold over time Almost anyone who is interested can observe and describe such phenomena But usually scientists demand more They want observations that are replicable and amenable to scientific analysis while still faithful to the dynamics of the phenomena studied This book provides a straightforward introduction to scientific methods for observing social behavior Because of the importance of time in the dynamics of social interaction sequential approaches to analyzing and understanding social behavior are emphasized An advanced knowledge of statistical analysis is not required Instead the authors present fundamental concepts and offer practical advice **Sacred Matters** Wesley R. Burr,Loren D. Marks,Randal D.

Day,2012-04-27 Sacred Matters explores the multi disciplinary literature about the role of religion in family life and provides new research and a new theory about ways various aspects of the sacred are helpful and harmful The authors hope that their new conceptual framework will stimulate new research and encourage the creation of new intervention programs designed to help families Sacred Matters features a new conceptual framework and theory about how when and why sacred matters influence family processes and outcomes new qualitative and quantitative research collected in a variety of ways from people with different religious perspectives in different geographical areas an expansion in theory and research about the role of forgiveness sacrifice prayer and sanctification in family life the integration of studies and issues from psychology sociology family studies anthropology and religion This book raises the bar in creating new theories about family processes and in the integration of theory research and application It begins with a review of the previous literature and then expands the

research about sanctification to create a new general theory or model about ways sacred processes help and hinder families. Next the authors expand the theory and research about the role of forgiveness, sacrifice, and prayer in families. New theory and research are then added about loving coping with conflict, dealing with undesirable behavior, generational relationships, morality, and the psychosocial aspects of religion. The authors then describe ways sacred theory can be integrated with other theories and ways it provides new explanations about broader social problems. The book concludes with new quantitative research and suggestions for future research. Researchers, practitioners, and advanced students in several disciplines will find this volume valuable. It will expand and enrich the reading in graduate and advanced undergraduate courses in areas such as family studies, human development, marriage and family therapy, the psychology of the family, and the psychology of religion, the sociology of the family, and the sociology of religion, pastoral counseling, anthropology, and social work.
