Introduction

The complexity of the individual patient and organization of medical practice results in important institutional and country quality of care variability.^{1–17} Attempts to assess the quality of clinical practice have established rating systems that may yield completely different results and rating for the same hospital during the same period of time, adding confusion rather than help to prove their usefulness and, questioning whether existing measures can actually measure quality.^{18–25} Most important, benchmarking may be associated with progressive improvement both in performance and outcomes,^{18,26,28,34–38} highlighting the relevance of standardization of quality measures and the responsibility of scientific societies.

Objectives

The Spanish Society of Cardiology (SSC) and the Spanish Society of Thoracic and Cardiovascular Surgery (SSTCS) organized a task force to identify and define two sets of quality metrics in hospital cardiology practice: (i) outcome measures (metrics of the final quality of the practice of cardiology) and (ii) performance measures (metrics of clinical practice which are known to positively influence desirable outcomes). Beyond this objective, Scientific Societies and Health Care Authorities should be responsible for the implementation of programmes to measure quality, ensure the quality of the data, benchmarking, and certification/accreditation of cardiology services.

Methods

All European Society of Cardiology (ESC)¹² and American Heart Association/American College of Cardiology³² guidelines were reviewed and recommendations related to quality standards were included in the document.

Grading of quality markers

Three levels were established both for class recommendation and level of evidence considering (i) clinical and practical relevance, (ii) source and difficulty to obtain the information, (iii) difficulty to audit and ascertain the information, and (iv) evidence in the literature (Table 1). Mortality and stroke were considered as self-evident. To avoid confusion with general clinical practice guidelines nomenclature, Class of recommendation was graded in 1, 2, and 3 grades instead of I, II, and III.

Type of hospital

For quality benchmarking, the task force established three types of hospitals defined as low, intermediate, and high complexity according to their organization, resources, and the need to transfer patients to other hospitals.

Clusters to assess overall quality in clinical practice

Quality of care parameters may be grouped in clusters including institution characteristics, available technologies, staffing of the hospital and cardiac unit, organization, certification and accreditation, reputation and patients opinion.^{17,29,40} All of them may influence outcomes, most are clearly identified in guidelines for clinical practice and all should be taken in consideration in every hospital.

Applications is designed to familiarize the reader with these concepts and to facilitate the application of these concepts to patients with cardiac disease. The chapters in this monograph detail the past, present and potential future of markers used for the detection of myocardial injury and for risk assessment as part of a cardiovascular disease work up strategy. The strengths of this extensive overview, written by many of the current leaders in the field, lie in the evidence presented in addressing analytical, technical, clinical and outcome assessments of each biomarker currently used in clinical practice and for those being investigated as potential cutting edge tools. Clinical cardiologists, pathologists, researchers and critical and primary care physicians interested in the clinical application of blood based assays in cardiac patients will all learn from this monograph.

Cardiac Markers Alan H. B. Wu, 2003-06-12 In this greatly enlarged and thoroughly updated edition of his much praised Cardiac Markers, Alan Wu and his contributors focus on the use of markers in the practice of cardiology and for the first time on the use of natriuretic peptides for congestive heart failure. Here leading international authorities in clinical chemistry and laboratory medicine, cardiology, emergency medicine and the in vitro diagnostics industry describe the state of the art uses of cardiac markers when treating coronary artery disease and discuss in detail how they may be optimally used in a clinical setting. Comprehensive and cutting edge Cardiac Markers, Second Edition offers physicians a complete guide to the use of cardiac markers in clinical practice and clinical laboratorians a close up view of the new markers now becoming standard.

Cardiovascular Biomarkers David A. Morrow, 2010-04-28 In the four pages committed to a discussion of myocardial infarction in the first edition of Harrison's Principles of Internal Medicine published in 1950, there was no mention of use of the laboratory for management of patients. Thirty years later, when the first edition of Braunwald's Heart Disease: A Textbook of Cardiovascular Medicine was published, 2 out of the 1943 pages in the text contained a discussion of the laboratory examinations in acute myocardial infarction. Our knowledge base of the multitude of ways that physicians can and should use the clinical chemistry laboratory has expanded dramatically since these classic texts were published. The nomenclature has changed; terms such as cardiac enzymes have given way to cardiac biomarkers. The number of assays has multiplied and the operating characteristics of available assays are improving at a gratifying but dizzying rate. We now use biomarkers to diagnose cardiovascular diseases and also to frame our treatment strategies. Thus, there is a clear need for a scholarly compilation of the state of the art of cardiac biomarkers. Dr. David Morrow has expertly edited an authoritative book that answers this need. The 34 chapters in Cardiovascular Biomarkers: Pathophysiology and Disease Management were written by a group of individuals who are internationally recognized thought leaders and experts in clinical and laboratory medicine.

Biomarkers in Cardiovascular Disease Vijay Nambi, 2018-11-27 Get a quick expert overview of the ways in which biomarkers can be used to assess and guide the management of cardiovascular disease in the clinical setting. syndromes has been the object of steadily increasing research particularly in respect of novel diagnostic and treatment modalities Although the WHO criteria for the diagnosis of acute myocardial infarction have been known for decades there is still much debate as to the proper use of these especially the handling of biochemical markers Traditional enzymes have limitations in diagnostic power and new markers have unclarified applicability with regard to standardisation of assays and decision limits Furthermore the growing understanding of the conception of minimal myocardial damage in the borderzone between unstable angina pectoris and myocardial infarction necessitates refinement in the definitions of the various entities within the kaleidoscope of acute myocardial ischaemia There has been a strong impetus within the European Society of Cardiology to present this subject to a broad audience of cardiologists and as a consequence the theme of biochemical markers has become an important constituent of the Education and Training Programmes of the Society This book has fundamental implications for the overall comprehension of this complex area This book on myocardial damage compiled by international experts will truly appeal to the basic scientist as well as the clinician searching for updated knowledge of the pathophysiology and risk stratification of unstable coronary syndromes **Cardiac Biomarkers** Alan S.
