Riemannian Foliations Progress In Mathematics Birkhauser Boston:

Riemannian Foliations Molino, 2012-12-06 Foliation theory has its origins in the global analysis of solutions of ordinary differential equations on an n dimensional manifold M an autonomous differential equation is defined by a vector field X if this vector field has no singularities then its trajectories form a partition of M into curves i.e a foliation of codimension $n-1$ More generally a foliation F of codimension q on M corresponds to a partition of M into immersed submanifolds the leaves of dimension $p=n-q$ The first global image that comes to mind is that of a stack of plaques Viewed laterally transversally the leaves of such a stacking are the points of a quotient manifold W of dimension q $W=M$ Actually this image corresponds to an elementary type of foliation that one says is simple For an arbitrary foliation it is only locally on a simple open set U that the foliation appears as a stack of plaques and admits a local quotient manifold Globally a leaf L may return and cut a simple open set U in several plaques sometimes even an infinite number of plaques *Foliations 2005 - Proceedings Of The International Conference* Pawel Walczak, Remi Langevin, Takashi Tsuboi, Steven Hurder, 2006-09-20 This volume takes a look at the current state of the theory of foliations with surveys and research articles concerning different aspects The focused aspects cover geometry of foliated Riemannian manifolds Riemannian foliations and dynamical properties of foliations and some aspects of classical dynamics related to the field Among the articles readers may find a study of foliations which admit a transverse contractive flow an extensive survey on non commutative geometry of Riemannian foliations an article on contact structures converging to foliations as well as a few articles on conformal geometry of foliations This volume also contains a list of open problems in foliation theory which were collected from the participants of the Foliation 2005 conference *Foliations 2005* Pawe? Grzegorz Walczak, 2006 This volume takes a look at the current state of the theory of foliations with surveys and research articles concerning different aspects The focused aspects cover geometry of foliated Riemannian manifolds Riemannian foliations and dynamical properties of foliations and some aspects of classical dynamics related to the field Among the articles readers may find a study of foliations which admit a transverse contractive flow an extensive survey on non commutative geometry of Riemannian foliations an article on contact structures converging to foliations as well as a few articles on conformal geometry of foliations This volume also contains a list of open problems in foliation theory which were collected from the participants of the Foliation 2005 conference *Foliations: Geometry And Dynamics - Proceedings Of The Euroworkshop* Lawrence Conlon, Remi Langevin, Takashi Tsuboi, Pawel Walczak, 2002-02-01 This volume contains surveys and research articles regarding different aspects of the theory of foliation The main aspects concern the topology of foliations of low dimensional manifolds the geometry of foliated Riemannian manifolds and the dynamical properties of foliations Among the surveys are lecture notes devoted to the analysis of some operator algebras on foliated manifolds and the theory of confoliations objects defined recently by W Thurston and Y Eliashberg situated between foliations and contact structures Among the research articles one

can find a detailed proof of an unpublished theorem due to Duminy concerning ends of leaves in exceptional minimal sets

Euroworkshop on Foliations Geometry and Dynamics, 29 May-9 June 2000, Warsaw, Poland Paweł Grzegorz Walczak, 2002 Contains surveys and research articles regarding different aspects of the theory of foliation **Foliations on Riemannian Manifolds and Submanifolds** Vladimir Rovenski, 2012-12-06 This monograph is based on the author's results on the Riemannian geometry of foliations with nonnegative mixed curvature and on the geometry of submanifolds with generators rulings in a Riemannian space of nonnegative curvature The main idea is that such foliated submanifolds can be decomposed when the dimension of the leaves generators is large The methods of investigation are mostly synthetic The work is divided into two parts consisting of seven chapters and three appendices Appendix A was written jointly with V Toponogov Part 1 is devoted to the Riemannian geometry of foliations In the first few sections of Chapter I we give a survey of the basic results on foliated smooth manifolds Sections 1.1, 1.3 and finish in Section 1.4 with a discussion of the key problem of this work the role of Riemannian curvature in the study of foliations on manifolds and submanifolds

Geometry, Dynamics And Topology Of Foliations: A First Course Bruno Scardua, Carlos Arnoldo Morales Rojas, 2017-02-16 The Geometric Theory of Foliations is one of the fields in Mathematics that gathers several distinct domains Topology Dynamical Systems Differential Topology and Geometry among others Its great development has allowed a better comprehension of several phenomena of mathematical and physical nature Our book contains material dating from the origins of the theory of foliations from the original works of C Ehresmann and G Reeb up till modern developments In a suitable choice of topics we are able to cover material in a coherent way bringing the reader to the heart of recent results in the field A number of theorems nowadays considered to be classical like the Reeb Stability Theorem Haefliger's Theorem and Novikov Compact leaf Theorem are proved in the text The stability theorem of Thurston and the compact leaf theorem of Plante are also thoroughly proved Nevertheless these notes are introductory and cover only a minor part of the basic aspects of the rich theory of foliations **Geometry of Foliations** Philippe Tondeur, 2012-12-06 The topics in this survey volume

concern research done on the differential geometry of foliations over the last few years After a discussion of the basic concepts in the theory of foliations in the first four chapters the subject is narrowed down to Riemannian foliations on closed manifolds beginning with Chapter 5 Following the discussion of the special case of flows in Chapter 6 Chapters 7 and 8 are devoted to Hodge theory for the transversal Laplacian and applications of the heat equation method to Riemannian foliations Chapter 9 on Lie foliations is a preparation for the statement of Molino's Structure Theorem for Riemannian foliations in

Chapter 10 Some aspects of the spectral theory for Riemannian foliations are discussed in Chapter 11 Connes point of view of foliations as examples of non commutative spaces is briefly described in Chapter 12 Chapter 13 applies ideas of Riemannian foliation theory to an infinite dimensional context Aside from the list of references on Riemannian foliations items on this list are referred to in the text by we have included several appendices as follows Appendix A is a list of books and surveys on particular aspects of foliations Appendix B is a list of proceedings of conferences and symposia devoted partially or entirely to foliations Appendix C is a bibliography on foliations which attempts to be a reasonably complete list of papers and preprints on the subject of foliations up to 1995 and contains approximately 2500 titles

Differential Geometry Elisabetta Barletta, Sorin Dragomir, Mohammad Hasan Shahid, Falleh R. Al-Solamy, 2025-02-06 This book *Differential Geometry Manifolds Bundles and Characteristic Classes Book I A* is the first in a captivating series of four books presenting a choice of topics among fundamental and more advanced in differential geometry DG such as manifolds and tensor calculus differentiable actions and principal bundles parallel displacement and exponential mappings holonomy complex line bundles and characteristic classes The inclusion of an appendix on a few elements of algebraic topology provides a didactical guide towards the more advanced Algebraic Topology literature The subsequent three books of the series are *Differential Geometry Riemannian Geometry and Isometric Immersions Book I B* *Differential Geometry Foundations of Cauchy Riemann and Pseudohermitian Geometry Book I C* *Differential Geometry Advanced Topics in Cauchy Riemann and Pseudohermitian Geometry Book I D* The four books belong to an ampler book project *Differential Geometry Partial Differential Equations and Mathematical Physics* by the same authors and aim to demonstrate how certain portions of DG and the theory of partial differential equations apply to general relativity and quantum gravity theory These books supply some of the ad hoc DG machinery yet do not constitute a comprehensive treatise on DG but rather Authors choice based on their scientific mathematical and physical interests These are centered around the theory of immersions isometric holomorphic and Cauchy Riemann CR and pseudohermitian geometry as devised by Sidney Martin Webster for the study of nondegenerate CR structures themselves a DG manifestation of the tangential CR equations

Metric Spaces of Non-Positive Curvature Martin R. Bridson, André Häfliger, 2013-03-09 The purpose of this book is to describe the global properties of complete simply connected spaces that are non positively curved in the sense of A D Alexandrov and to examine the structure of groups that act properly on such spaces by isometries Thus the central objects of study are metric spaces in which every pair of points can be joined by an arc isometric to a compact interval of the real line and in which every triangle satisfies the CAT O inequality This inequality encapsulates the concept of non positive curvature in Riemannian geometry and allows one to reflect the same concept faithfully in a much wider setting that of geodesic metric spaces Because the CAT O condition captures the essence of non positive curvature so well spaces that satisfy this condition display many of the elegant features inherent in the geometry of non positively curved manifolds There is therefore a great deal to be said about the global

structure of CAT O spaces and also about the structure of groups that act on them by isometries such is the theme of this book 1 The origins of our study lie in the fundamental work of A D Alexandrov **Foliations and Geometric Structures** Aurel Bejancu,Hani Reda Farran,2006-01-17 Offers basic material on distributions and foliations This book introduces and builds the tools needed for studying the geometry of foliated manifolds Its main theme is to investigate the interrelations between foliations of a manifold on the one hand and the many geometric structures that the manifold may admit on the other hand

Szenthe,2012-12-06 Proceedings of the Conference on Differential Geometry Budapest Hungary July 27 30 1996 Differential Geometry And Its Applications - International Conference Josef Janyska,Demeter Krupka,1990-03-01 The proceedings consists of lectures and selected original research papers presented at the conference The contents is divided into 3 parts I Geometric structures II the calculus of variations on manifolds III Geometric methods in physics The volume also covers interdisciplinary areas between differential geometry and mathematical physics like field theory relativity classical and quantum mechanics *New Trends in Sub-Riemannian Geometry* Fabrice Baudoin,Luca Rizzi,2025-01-27 This volume contains the proceedings of the AMS EMS SMF Special Session on Sub Riemannian Geometry and Interactions held from July 18 20 2022 at the Universit de Grenoble Alpes Grenoble France Sub Riemannian geometry is a generalization of Riemannian one where a smooth metric is defined only on a preferred subset of tangent directions Under the so called H rmander condition all points are connected by finite length curves giving rise to a well defined metric space Sub Riemannian geometry is nowadays a lively branch of mathematics connected with probability harmonic and complex

Introduction to Foliations and Lie Groupoids I. Moerdijk, J. Mrcun, 2003-09-18 This book gives a quick introduction to the theory of foliations Lie groupoids and Lie algebroids An important feature is the emphasis on the interplay between these concepts Lie groupoids form an indispensable tool to study the transverse structure of foliations as well as their noncommutative geometry while the theory of foliations has immediate applications to the Lie theory of groupoids and their infinitesimal algebroids The book starts with a detailed presentation of the main classical theorems in the theory of foliations then proceeds to Molino's theory Lie groupoids constructing the holonomy groupoid of a foliation and finally Lie algebroids Among other things the authors discuss to what extent Lie's theory for Lie groups and Lie algebras holds in the more general context of groupoids and algebroids Based on the authors extensive teaching experience this book contains numerous examples and exercises making it ideal for graduate students and their instructors
