   Riemannian Submersions And Related Topics Anna Maria Pastore,Maria Falcitelli,Stere Ianus,2004-06-21 This book provides the first ever systematic introduction to the theory of Riemannian submersions which was initiated by Barrett O Neill and Alfred Gray less than four decades ago The authors focus their attention on classification theorems when the total space and the fibres have nice geometric properties Particular emphasis is placed on the interrelation with almost Hermitian almost contact and quaternionic geometry Examples clarifying and motivating the theory are included in every chapter Recent results on semi Riemannian submersions are also explained Finally the authors point out the close connection of the subject with some areas of physics   **Riemannian Submersions and Related Topics** Maria Falcitelli,Anna Maria Pastore,Stere Ianus,2004 First systematic exposition devoted to Riemannian submersions Deals with current material Contains a wide ranging bibliography and about 350 references   **Riemannian Submersions, Riemannian Maps in Hermitian Geometry, and their Applications** Bayram Sahin,2017-01-23 Riemannian Submersions Riemannian Maps in Hermitian Geometry and their Applications is a rich and self contained exposition of recent developments in Riemannian submersions and maps relevant to complex geometry focusing particularly on novel submersions Hermitian manifolds and K a hlerian manifolds Riemannian submersions have long been an effective tool to obtain new manifolds and compare certain manifolds within differential geometry For complex cases only holomorphic submersions function appropriately as discussed at length in Falcitelli Ianus and Pastore s classic 2004 book In this new book Bayram Sahin extends the scope of complex cases with wholly new submersion types including Anti invariant submersions Semi invariant submersions slant submersions and Pointwise slant submersions also extending their use in Riemannian maps The work obtains new properties of the domain and target manifolds and investigates the harmonicity and geodesicity conditions for such maps It also relates these maps with discoveries in pseudo harmonic maps Results included in this volume should stimulate future research on Riemannian submersions and Riemannian maps Systematically reviews and references modern literature in Riemannian maps Provides rigorous mathematical theory with applications Presented in an accessible reading style with motivating examples that help the reader rapidly progress   **Harmonic Morphisms, Harmonic Maps and Related Topics** Christopher Kum Anand,Paul Baird,John Colin Wood,Eric Loubeau,1999-10-13 The subject of harmonic morphisms is relatively new but has attracted a huge worldwide following Mathematicians young researchers and distinguished experts came from all corners of the globe to the City of Brest site of the first international conference devoted to the fledgling but dynamic field of harmonic morphisms Harmonic Morphisms Harmonic Maps and Related Topics reports the proceedings of that conference forms the first work primarily devoted to harmonic morphisms bringing together contributions from the founders of the subject leading specialists and experts in other related fields Starting with The Beginnings of Harmonic Morphisms which provides the essential background the first section includes papers on the stability of harmonic morphisms

global properties harmonic polynomial morphisms Bochner technique f structures symplectic harmonic morphisms and discrete harmonic morphisms The second section addresses the wider domain of harmonic maps and contains some of the most recent results on harmonic maps and surfaces The final section highlights the rapidly developing subject of constant mean curvature surfaces Harmonic Morphisms Harmonic Maps and Related Topics offers a coherent balanced account of this fast growing subject that furnishes a vital reference for anyone working in the field *Riemannian Manifolds and Homogeneous Geodesics* Valerii Berestovskii,Yurii Nikonorov,2020-11-05 This book is devoted to Killing vector fields and the one parameter isometry groups of Riemannian manifolds generated by them It also provides a detailed introduction to homogeneous geodesics that is geodesics that are integral curves of Killing vector fields presenting both classical and modern results some very recent many of which are due to the authors The main focus is on the class of Riemannian manifolds with homogeneous geodesics and on some of its important subclasses To keep the exposition self contained the book also includes useful general results not only on geodesic orbit manifolds but also on smooth and Riemannian manifolds Lie groups and Lie algebras homogeneous Riemannian manifolds and compact homogeneous Riemannian spaces The intended audience is graduate students and researchers whose work involves differential geometry and transformation groups **Geometry of CR-Submanifolds and Applications** Bang-Yen Chen,Mohammad Hasan Shahid,Gabriel-Eduard Vîlcu,2025-08-29 This book attempts to present a comprehensive survey of the geometry of CR submanifolds The theory of submanifolds is one of the most interesting topics in differential geometry The topic is introduced by Aurel Bejancu as a generalization of holomorphic and totally real submanifolds of almost Hermitian manifolds in 1978 Afterward the study of CR submanifolds became a very active research subject Organized into 22 chapters the book starts with basic knowledge of Riemannian manifolds and submanifolds almost Hermitian manifolds and their subclasses Hopf fibration symmetric spaces and a general inequality for submanifolds in complex space forms in Chaps 1 and 2 Later it presents the main results on CR submanifolds in Kaehler manifolds the basic inequalities associated with CR submanifolds in Kaehler manifolds and several theories and results related to Kaehler manifolds in Chaps 3 11 Further the book discusses the basics of almost contact metric manifolds and their subclasses CR submanifolds of Sasakian trans Sasakian and quasi Sasakian manifolds with a particular attention on the normal CR submanifolds in Chap 12 It also investigates the contact CR submanifolds of S manifolds the geometry of submersions of CR submanifolds and the results on contact CR warped product submanifolds in Chaps 16 18 20 In Chapter 19 we discuss submersions of CR submanifolds The book also presents some recent results concerning CR submanifolds of holomorphic statistical manifolds In particular it gives the classification of totally umbilical CR statistical submanifolds in holomorphic statistical manifolds as well as a Chen Ricci inequality for such submanifolds Chapter 21 In the last chapter we present results on CR submanifolds of indefinite Kaehler manifolds and their applications to physics *Geometry of Cauchy-Riemann Submanifolds* Sorin Dragomir,Mohammad Hasan Shahid,Falleh R.

Spectral Geometry, Riemannian Submersions, and the Gromov-Lawson Conjecture Peter B. Gilkey,John V Leahy,JeongHyeong Park,1999-07-27 This cutting edge standard setting text explores the spectral geometry of Riemannian submersions Working for the most part with the form valued Laplacian in the class of smooth compact manifolds without boundary the authors study the relationship if any between the spectrum of Dp on Y and Dp on Z given that Dp is the p form valued Laplacian and pi Z Y is a Riemannian submersion After providing the necessary background including basic differential geometry and a discussion of Laplace type operators the authors address rigidity theorems They establish conditions that ensure that the pull back of every eigenform on Y is an eigenform on Z so the eigenvalues do not change then show that if a single eigensection is preserved the eigenvalues do not change for the scalar or Bochner Laplacians For the form valued Laplacian they show that if an eigenform is preserved then the corresponding eigenvalue can only increase They generalize these results to the complex setting as well However the spinor setting is quite different For a manifold with non trivial boundary and imposed Neumann boundary conditions the result is surprising the eigenvalues can change Although this is a relatively rare phenomenon the authors give examples a circle bundle or more generally a principal bundle with structure group G where the first cohomology group H1 G R is non trivial They show similar results in the complex setting show that eigenvalues can decrease in the spinor setting and offer a list of unsolved problems in this area Moving to some related topics involving questions of positive curvature for the first time in mathematical literature the authors establish a link between the spectral geometry of Riemannian submersions and the Gromov Lawson conjecture Spectral Geometry Riemannian Submersions and the Gromov Lawson Conjecture addresses a hot research area and promises to set a standard for the field Researchers and applied mathematicians interested in mathematical physics and relativity will find this work both fascinating and important *Differential Geometry and Global Analysis* Bang-Yen Chen,Nicholas D. Brubaker,Takashi Sakai,Bogdan D. Suceavă,Makiko Sumi Tanaka,Hiroshi Tamaru,Mihaela B. Vajiac,2022-04-07 This volume contains the proceedings of the AMS Special Session on Differential Geometry and Global Analysis Honoring the Memory of Tadashi Nagano 1930 2017 held January 16 2020 in Denver Colorado Tadashi Nagano was one of the great Japanese differential

geometers whose fundamental and seminal work still attracts much interest today This volume is inspired by his work and his legacy and while recalling historical results presents recent developments in the geometry of symmetric spaces as well as generalizations of symmetric spaces minimal surfaces and minimal submanifolds totally geodesic submanifolds and their classification Riemannian affine projective and conformal connections the M_ M_ method and its applications and maximal antipodal subsets Additionally the volume features recent achievements related to biharmonic and biconservative hypersurfaces in space forms the geometry of Laplace operator on Riemannian manifolds and Chen Ricci inequalities for Riemannian maps among other topics that could attract the interest of any scholar working in differential geometry and global analysis on manifolds **Pseudo-Riemannian Geometry, [delta]-invariants and Applications** Bang-yen Chen,2011 The first part of this book provides a self contained and accessible introduction to the subject in the general setting of pseudo Riemannian manifolds and their non degenerate submanifolds only assuming from the reader some basic knowledge about manifold theory A number of recent results on pseudo Riemannian submanifolds are also included The second part of this book is on invariants which was introduced in the early 1990s by the author The famous Nash embedding theorem published in 1956 was aimed for in the hope that if Riemannian manifolds could be regarded as Riemannian submanifolds this would then yield the opportunity to use extrinsic help However this hope had not been materialized as pointed out by M Gromov in his 1985 article published in Asterisque The main reason for this is the lack of control of the extrinsic invariants of the submanifolds by known intrinsic invariants In order to overcome such difficulties as well as to provide answers for an open question on minimal immersions the author introduced in the early 1990s new types of Riemannian invariants known as invariants which are very different in nature from the classical Ricci and scalar curvatures At the same time he was able to establish general optimal relations between invariants and the main extrinsic invariants Since then many new results concerning these invariants have been obtained by many geometers The second part of this book is to provide an extensive and comprehensive survey over this very active field of research done during the last two decades *Metric Foliations and Curvature* Detlef Gromoll,Gerard Walschap,2009-03-28 In the past three or four decades there has been increasing realization that metric foliations play a key role in understanding the structure of Riemannian manifolds particularly those with positive or nonnegative sectional curvature In fact all known such spaces are constructed from only a representative handful by means of metric fibrations or deformations thereof This text is an attempt to document some of these constructions many of which have only appeared in journal form The emphasis here is less on the fibration itself and more on how to use it to either construct or understand a metric with curvature of fixed sign on a given space *Differential Equations - Geometry, Symmetries and Integrability* Boris Kruglikov,Valentin Lychagin,Eldar Straume,2009-07-24 The Abel Symposium 2008 focused on the modern theory of differential equations and their applications in geometry mechanics and mathematical physics Following the tradition of Monge Abel and Lie the scientific program emphasized the role of algebro

geometric methods which nowadays permeate all mathematical models in natural and engineering sciences The ideas of invariance and symmetry are of fundamental importance in the geometric approach to differential equations with a serious impact coming from the area of integrable systems and field theories This volume consists of original contributions and broad overview lectures of the participants of the Symposium The papers in this volume present the modern approach to this classical subject   Differential Geometry of Lightlike Submanifolds Krishan L.
