Critical Infrastructures at Risk A.V. Gheorghe,M. Masera,M. Weijnen,2006-01-27 Europe witnessed in the last years a number of significant power contingencies Some of them revealed the potentiality of vast impact on the welfare of society and triggered pressing questions on the reliability of electric power systems Society has incorporated electricity as an inherent component indispensable for achieving the expected level of quality of life Therefore any impingement on the continuity of the electricity

service would be able to distress society as a whole affecting individuals social and economic activities other infrastructures and essential government functions It would be possible to hypothesize that in extreme situations this could even upset national security This book explores the potential risks and vulnerabilities of the European electricity infrastructure other infrastructures and our society as whole increasingly depend on The work was initiated by the need to verify the potential effects of the ongoing market and technical transformation of the infrastructure which is fundamentally changing its operation and performance The final aim is to set the basis for an appropriate industrial and political European wide response to the risk challenges

Managing Aerospace Projects Jimmy Williams, 2017-09-12 Over the next twenty years the role and contributions of successfully managed projects will continue to grow in importance to aerospace organizations especially considering the demands of emerging markets The accompanying challenges will be how to effectively reduce product and process cost where known incremental and unknown transformational technological innovation is required *Managing Aerospace Projects* brings together ten seminal SAE technical papers that support the vision of a more holistic and integrated approach to highly complex projects Using the concept of project management levers Dr Jimmy Williams Jr the editor of this title expands on the critical importance of correctly deciding on Organizational strategies Technology and product strategy Global portfolio strategy Project portfolio strategy Sub optimized strategies result in and contribute to a portfolio of misdirected projects and organizational dissatisfaction with project management outcomes unrelated to the actual project management process As an example ensuring the convergence and readiness of technologies that are critical for the design development and assembly of aircraft requires a disciplined and flexible approach for product and technology development Operating in an environment in which customer needs and supplier capabilities are dynamic requires continual focus on a portfolio of projects initiatives and capabilities that result in sustaining competitive advantage and influence *Managing Aerospace Projects* stresses the positive impact of project classification and the specific handling and leadership knowledge requirements so that these endeavors are indeed successful Some comparisons and lessons from the automotive industry are offered The notion that project management competence and capabilities are embedded in distinct ways of coordinating and combining multiple competencies suggests that failing to recognize the required organizational adaptations could be a major contributor to sub optimized project management outcomes

Ortwin Renn University of Stuttgart Stuttgart Germany Need for analytic deliberative processes Inviting the public to be part of the decision making process in natural resource management has been a major objective in European and American environmental policy arenas The US National Academy of Sciences has encouraged environmental protection agencies to foster citizen participation and public involvement for making environmental policy making and natural resource management more effective and democratic Stern and Fineberg 1996 The report emphasizes the need for a combination of assessment and dialogue which the authors have framed the analytic deliberative approach Unfortunately early public involvement of the public in deliberative processes may compromise however the objective of efficient and effective policy implementation or violate the principle of fairness Cross 1998 Okrent 1998 Another problem is that the public consists of many groups with different value structures and preferences Without a systematic procedure to reach consensus on values and preferences the public's position often appears as unclear Coglianesi 1997 Rossi 1997 Participatory processes are thus needed that combine technical expertise rational decision making and public values and preferences How can and should natural resource managers collect public preferences integrate public input into the management process and assign the appropriate roles to technical experts stakeholders i e
