### **User-Centred Requirements for Software Engineering Environments**

David J. Gilmore, Russel L. Winder, Francoise Detienne, 2013-06-29 The idea for this workshop originated when I came across and read Martin Zelkowitz's book on Requirements for Software Engineering Environments the proceedings of a small workshop held at the University of Maryland in 1986 Although stimulated by the book I was also disappointed in that it didn't adequately address two important questions Whose requirements are these and Will the environment which meets all these requirements be usable by software engineers And thus was the decision made to organise this workshop which would explicitly address these two questions As time went by setting things up it became clear that our workshop would happen more than five years after the Maryland workshop and thus at the same time as addressing the two questions above this workshop would attempt to update the Zelkowitz approach Hence the workshop acquired two halves one dominated by discussion of what we already know about usability problems in software engineering and the other by discussion of existing solutions technical and otherwise to these problems This scheme also provided a good format for bringing together those in the HCI community concerned with the human factors of software engineering and those building tools to solve acknowledged but rarely understood problems

### **Software Creativity 2.0** Robert L. Glass, 2006 Glass explores a critical yet strangely neglected question What is the role of creativity in software engineering and computer programming With his trademark easy to read style and practical approach backed by research and personal experience Glass takes on a wide range of related angles and implications Computer Books

### Computers at Risk

National Research Council, Division on Engineering and Physical Sciences, Computer Science and Telecommunications Board, Commission on Physical Sciences, Mathematics, and Applications, System Security Study Committee, 1990-02-01

Computers at Risk presents a comprehensive agenda for developing nationwide policies and practices for computer security Specific recommendations are provided for industry and for government agencies engaged in computer security activities The volume also outlines problems and opportunities in computer security research recommends ways to improve the research infrastructure and suggests topics for investigators The book explores the diversity of the field the need to engineer countermeasures based on speculation of what experts think computer attackers may do next why the technology community has failed to respond to the need for enhanced security systems how innovators could be encouraged to bring more options to the marketplace and balancing the importance of security against the right of privacy

### *Workshop on High Performance*

*Computing and Gigabit Local Area Networks* G. Cooperman, G. Michler, H. Vinck, 2006-04-11 The combination of fast low latency networks and high performance distributed tools for mathematical software has resulted in widespread affordable scientific computing facilities Practitioners working in the fields of computer communication networks distributed computing computational algebra and numerical analysis have been brought together to contribute to this volume and explore the emerging distributed and parallel technology in a scientific environment This collection includes surveys and original research on both software infrastructure for parallel applications and hardware and architecture infrastructure Among the topics covered are switch based high speed networks ATM over local and wide area networks network performance application support finite element methods eigenvalue problems invariant subspace decomposition QR factorization and Todd Coxeter coset enumeration

Periyasamy, 2013-03-14 This is a textbook on software specification emphasizing formal methods that are relevant to requirements and design stages of software development The aim of the book is to teach the fundamental principles of formal methods in the construction of modular and verifiable formal specifications The book introduces several formal specification techniques and illustrates the expressive power of each technique with a number of examples

**General Characteristics** Traditional textbooks on software engineering discuss the difficulties and challenges that lie on the path from requirements analysis to implementation of a software product Most of these books describe some techniques in detail and give hints on implementation of these techniques Only a few among them deal with important software engineering principles and techniques and discuss how a particular technique may be used to implement a given principle There is very little exposure in these books to a rigorous approach to or a systematic study of the construction of verifiable software Those who have acquired an understanding of the fundamental principles of software engineering from traditional textbooks will find the following characteristics of this book quite relevant to the practice of software engineering The book deals with specification The principal characteristic of this book is to discuss formalisms that provide a theoretical foundation for the principles of software engineering and are appropriate to the requirements and design stages of software development
