Scandinavian Caledonides Trygve Strand, Oskar Kulling, 1972 New Perspectives on the Caledonides of Scandinavia and Related Areas F. Corfu, D. Gasser, D. M. Chew, 2014-04-14 The Caledonides are a major orogenic belt that stretches from the Arctic through Scandinavia East Greenland Britain and Ireland into the Atlantic coast of North America Following the break up of Rodinia the Caledonides formed in the Palaeozoic by the drifting of various continents and their eventual aggregation in the Silurian and Devonian The orogen subsequently fragmented during the opening of the Atlantic Ocean This volume brings together 25 papers presenting the results of modern research that investigates the orogenic processes and the provenance of specific components of the belt The contributions reflect different lines of research linking traditional field studies with modern analytical techniques In addition three overview papers summarize the main features of the belts in Scandinavia Svalbard East Greenland Britain and Ireland highlighting the advances made since the last major synthesis of the Scandinavian Caledonides 30 years ago and discussing important open questions

Statistical Models for Optimizing Mineral Exploration J.G. De Geoffroy,T.K. Wignall,2012-12-06 After the spectacular successes of the 1960 s and 1970 s the mineral exploration business is at a crossroads facing uncertain t imes in the decades ahead This situation requires a re thinking of the philosophy guiding mineral exploration if it is to emulate its recent performance The ma i n argument of a previous volume titled Designing Opt lmal Strategies for Mineral Exploration published in 1985 by Plenum Publishing Corporation of New York is that a possible answer to the challenge facing mineral explorationists lies in the philosophy of opt irn1zation This new approach should help exploration staff make the best achievable use of the sophisticated and costly technology which is presently available for the detection of ore deposits The main emphasis of the present volume is placed on the mathematical and computational aspects of the opt irn1zation of mineral exploration The seven chapters making up the ma i n body of the book are devoted to the description and application of various types of computerized geomathematical

models which underpin the optimization of the mineral exploration sequence The topics covered include a the optimal selection of ore deposit types and regions of search as well as prospecting areas within the regions Chapters 2 3 4 6 b the designing of airborne and ground field programs for the optimal coverage of prospecting areas Chapters 2 3 4 c delineation and evaluation of exploration targets within prospecting areas by means of optimized models Chapter 5
