Schemas in Problem Solving Sandra P. Marshall,1995-06-30 Schemas in Problem Solving introduces a new approach to the study of learning instruction and assessment Focusing on the area of arithmetic story problems Marshall shows how instruction can lead to more meaningful learning by emphasizing the ways students acquire and store knowledge in memory She identifies major knowledge structures called schemas describes instruction designed around these structures and assesses the strengths and weaknesses in the knowledge that the students demonstrate following instruction To evaluate the success of her approach Marshall describes traditional experiments and computer simulations of student performance

Schemas in Problem Solving: An Integrated Model of Memory, Learning, and Instruction ,1991 The purpose of the project was to develop a schema based model of teaching and learning and to test the adequacy of that model in a computer based instructional system The domain of instruction is arithmetic word problems and the schemas center on the situations that can be expressed in such problems A core set of situations was identified and a series of studies verified that the situations were sufficient for describing virtually all legitimate work problems A model of schema knowledge was constructed for each of the basic situations Each schema model specified the feature knowledge constraint knowledge planning knowledge and implementation knowledge required to use the schema successfully *Provisional Summary*

Wand, 2010-10-19 This book constitutes the refereed proceedings of the 29th International Conference on Conceptual Modeling ER 2010 held in Vancouver BC Canada in November 2010 The 32 revised full papers presented were carefully reviewed and selected from 147 submissions The papers are organized in topical sections on business process modeling requirements engineering and modeling 1 requirements engineering and modeling 2 data evolution and adaptation operations on spatio temporal data demos and posters model abstraction feature modeling and filtering integration and composition consistency satisfiability and compliance checking using ontologies for query answering and document and query processing *Adaptive Reasoning for Real-world Problems* Roy Turner, 2013-05-13 This book describes a method for

building real world problem solving systems such as medical diagnostic procedures and intelligent controllers for autonomous underwater vehicles AUVs and other robots The approach taken is different from other work reported in the artificial intelligence literature in several respects It defines schema based reasoning in which schemas explicitly declared packets of related knowledge are used to control not only the reasoner s planning but also all other facets of its behavior It is a kind of reactive reasoning that the author calls adaptive problem solving the reasoner maintains commitments to future goals but is able to change its focus of attention as the problem solving situation requires It is a context sensitive reasoning method Every decision it makes relies on the use of contextual knowledge to be appropriate for the current problem solving situation Furthermore context is represented explicitly by always keeping a current representation of the context in mind the reasoner s behavior is automatically sensitive to the context with very little work needed per decision Schema based reasoning a generalization of case based reasoning extends the usual idea of case based reasoning to encompass all aspects of the reasoner s behavior and it extends it to make use of generalized cases i e schemas rather than particular cases thus saving effort needed to transfer knowledge from an old case to a new situation Though the work originated in the domain of medical diagnostic problem solving treating diagnosis as a planning task it is even more appropriate for controlling autonomous systems The author is currently extending the approach by creating a robust controller for long range autonomous underwater vehicles that will be used to carry out ocean science missions **Learning to Solve Problems**
