Statistical Methods in Education and Psychology A.K. Kurtz, S.T.

Mayo, 2012-12-06 This book is intended for use in the elementary statistics course in Education or in Psychology While it is primarily designed for use in the first semester of a two semester course it may also be used in a one semester course There are not five or ten competing texts the number is much closer to fifty or a hundred Why then should we write still another one A new statistics text for use in Education and Psychology is to some slight extent comparable to a new translation or edition of the Bible Most of it has been said before but this time with a difference The present writers realize that elementary statistics students know very little about the subject even the meaning of it is all Greek to them This text covers the basic course in depth with examples using real data from the real world It of course contains the usual reference tables and several new ones it gives the appropriate formulas every time and it accurately depicts all graphs It is so comprehensive that if instructors can't find their own special areas of interest covered then those interests probably don't belong in a basic text
