Marine Life John David George, Jennifer J. George, 1979-01-01 **Marine Life** J. David George, 1976 "*Framing the Ocean, 1700 to the Present*" Tricia Cusack, 2017-07-05 Before the eighteenth century the ocean was regarded as a repulsive and chaotic deep Despite reinvention as a zone of wonder and pleasure it continued to be viewed in the West and elsewhere as uninhabited empty space This collection spanning the eighteenth century to the present recasts the ocean as social space with particular reference to visual representations Part I focuses on mappings and crossings showing how the ocean may function as a liminal space between places and cultures but also connects and imbricates them Part II considers ships as microcosmic societies shaped for example by the purpose of the voyage the mores of shipboard life and cross cultural encounters Part III analyses narratives accreted to wrecks and rafts what has sunk or floats perilously and discusses attempts to recuperate plastic flotsam Part IV plumbs ocean depths to consider how underwater creatures have been depicted in relation to emergent disciplines of natural history and museology how mermaids have been reimagined as a metaphor of feminist transformation and how the symbolism of coral is deployed by contemporary artists This engaging and erudite volume will interest a range of scholars in humanities and social sciences including art and cultural historians cultural geographers and historians of empire travel and tourism *Marine Chemical Ecology* James B. McClintock, Bill J. Baker, 2001-06-13 The interdisciplinary field of marine chemical ecology is an expanding and dynamic science It is no surprise that the breadth of marine organisms studied expanded in concert with developments in underwater technology With its up to date subject reviews by experts *Marine Chemical Ecology* is the most current comprehensive book on the subject The **An introduction to Coastal Ecology** Patrick J. S. Boaden, 2012-12-06 Studies of marine ecology have traditionally been approached through lectures and field courses devoted mainly to intertidal and inshore habitats and it is surprising in these days of increased awareness of man s environmental impact that so little attention has been given to integrated approaches involving the whole coastal zone and including the terrestrial part which is man s major habitat The coastal zone has been the subject of extensive investigation not only because of its biological diversity and accessibility but also because of its economic and aesthetic importance to man This book is written with the intention of providing a concise but readable account of coastal ecology for advanced undergraduates and immediate postgraduates We have adopted a habitat organismal approach because we believe that a knowledge of biota and major features of their environment is the best key to an understanding of both larger scale processes such as energy flow and nutrient cycling and smaller scale but equally fundamental processes such as behavioural and physiological ecology Examples have been selected from polar temperate and tropical regions of the world The breadth of the subject has dictated selectivity from sources too numerous to acknowledge individually but we have included an up to date reference list for the main subjects of each chapter Trophic Models of Aquatic Ecosystems Villy Christensen, Daniel Pauly, 1993 The Marine World Frances Dipper, 2021-06-08 The

Marine World is a book for everyone with an interest in the ocean from the marine biologist or student wanting expert knowledge of a particular group to the naturalist or diver exploring the seashore and beyond With colour illustrations line drawings more than 1 500 colour photographs and with clear accessible text this book encompasses all those organisms that live in on and around the ocean bringing together in a single text everything from the minuscule to the immense It includes sections on all but the most obscure marine groups covering invertebrate phyla from sponges to sea squirts as well as plants fungi bacteria fish reptiles mammals and birds It incorporates information on identification distribution structure biology ecology classification and conservation of each group addressing the questions of what where and how Today global warming overfishing ocean acidification and pollution are just a few of the ever increasing number of threats and challenges faced by ocean life Without knowledge of the animals plants and other organisms that live in the marine world we cannot hope to support or implement successful conservation and management measures nor truly appreciate the incredible wealth and variety of marine life The Marine World is the product of a lifetime spent by Frances Dipper happily observing and studying marine organisms the world over It has been brought to colourful life by a myriad of enthusiastic underwater photographers and by Marc Dando the renowned natural history illustrator
