Physics Of Hot Plasmas Scottish Universities Summer School 1968:

Physics of Hot Plasmas B. J. Rye, 2012-12-06 HE ninth Scottish Universities Summer School in Physics sponsored T jointly by the Scottish Universities and NATO was held at Newbattle Abbey from 28th July to 16th August 1968 This was the first Scottish Summer School to be devoted to plasma physics the exact title for the School being the Physics of Hot Plasmas Forty three students were accepted fourteen of these being resident in the United Kingdom In addition there were eleven lecturers and seven other participants The choice of lecturers particularly in experimental plasma physics was limited to some extent by the fact that an international conference on controlled fusion was held at Novosibirsk during the first week in August Notwithstanding this it was possible to arrange a programme of lectures reasonably well balanced between theoretical and experimental plasma physics The topics chosen included kinetic theory waves and oscillations instabilities turbulence collisionless shocks computational methods laser scattering and laser generated plasmas plasma production and containment Several seminars on special topics were given by invited speakers and by students

Propagation of High-power Laser Radiation in Partially Ionized Gases Robert J. Papa, Richard L. Taylor, 1974 When a laser beam of sufficiently high intensity interacts with a weakly ionized gas the nonuniform deposition of laser energy into the electron gas causes heating of the electrons ions and neutral gas Eventually the neutral gas will break down and become more highly ionized This ionization can seriously limit the amount of laser energy that can damage a target A multifluid model has been devised to describe the many physical processes that occur when the high power laser wave interacts with the partially ionized gas A flexible computer program has been developed to numerically integrate the multifluid plasma transport equations coupled with Maxwell s equations The computer program is sufficiently general so as to be capable of describing target vaporization with diffusion and ionization of target material into an ambient gas In this report only the modification of an ambient gas by the laser radiation is studied
