[Miracles and Machines](#) Elizabeth King,W. David Todd,2023-08-15 An abundantly illustrated narrative that draws from the history of art science technology artificial intelligence psychology religion and conservation in telling the extraordinary story of a Renaissance robot that prays This volume tells the singular story of an uncanny rare object at the cusp of art and science a 450 year old automaton known as the monk The walking gesticulating figure of a friar in the collection of the Smithsonian Institution s National Museum of American History is among the earliest extant ancestors of the self propelled robot According to legend connected to the court of Philip II of Spain the monk represents a portrait of Diego de Alcal a humble Franciscan lay brother whose holy corpse was said to be agent to the miraculous cure of Spain s crown prince as he lay dying

in 1562 In tracking the origins of the monk and its legend the authors visited archives libraries and museums across the United States and Europe probing the paradox of a mechanical object performing an apparently spiritual act They identified seven kindred automata from the same period which they argue form a paradigmatic class of walking prime movers unprecedented in their combination of visual and functional realism While most of the literature on automata focuses on the Enlightenment this enthralling narrative journeys back to the late Renaissance when clockwork machinery was entirely new foretelling the evolution of artificial life to come

A Brief Illustrated History of Machines and Mechanisms Emilio Bautista Paz,Marco Ceccarelli,Javier Echávarri Otero,José Luis Muñoz Sanz,2010-08-02 Machines have always gone hand in hand with the cultural development of mankind throughout time A book on the history of machines is nothing more than a specific way of bringing light to human events as a whole in order to highlight some significant milestones in the progress of knowledge by a complementary perspective into a general historical overview This book is the result of common efforts and interests by several scholars teachers and students on subjects that are connected with the theory of machines and mechanisms In fact in this book there is a certain teaching aim in addition to a general historical view that is more addressed to the achievements by homo faber than to those by homo sapiens since the proposed history survey has been developed with an engineering approach The brevity of the text added to the fact that the authors are probably not content to tackle historical studies with the necessary rigor means the content of the book is inevitably incomplete but it nevertheless attempts to fulfil three basic aims First it is hoped that this book may provide a stimulus to promote interest in the study of technical history within a mechanical engineering context Few are the countries where anything significant is done in this area which means there is a general lack of knowledge of this common cultural heritage

early modern libraries and the imperial desire for total knowledge Medieval scholars imagined the library as a microcosm of the world but as novel early modern ways of managing information facilitated empire in both the New and Old Worlds the world became a projection of the library In *The Librarian's Atlas* Seth Kimmel offers a sweeping material history of how the desire to catalog books coincided in the sixteenth and seventeenth centuries with the aspiration to control territory Through a careful study of library culture in Spain and Morocco close readings of catalogs marginalia indexes commentaries and maps Kimmel reveals how the booklover's dream of a comprehensive and well organized library shaped an expanded sense of the world itself Breaking the Disciplines Martin L. Davies, Marsha Meskimmon, 2003-08-22

International scholars explore the ways in which knowledge actually operates showing the limitations of now outmoded disciplines Coming from fields as diverse as anthropology philosophy literature aesthetics and art practice together they break down the boundaries between entrenched domains of knowledge Studies of objects which confound traditional definitions including a mechanical cow invented by an Irish farmer and the curious case of a mechanical monk show how a close look at an individual object can paradoxically open up dynamic new reconceptions of traditional systems of knowledge With social uses of knowledge currently a matter of public debate this should be a timely text **Worlds of Work: Peasants and Artisans, Engineers and Theorists** Carlo Poni, 2025-07-09

The essays in this volume take the readers into the complex world of work in early modern Europe Carlo Poni explores this theme from multiple perspectives examining work practices in agriculture artisan production and the silk industry Extensive archival material analyzed with theories derived from Economics illuminates the social relations and conflicts that arose from different work practices in agriculture artisan production and the silk industry The author presents the ideas of seventeenth and eighteenth century theorists Galileo Galilei's theory of mechanics as a way to understand how machines work the Venetian engineer Vittorio Zonca on mechanics the natural philosopher John Theophilus Desaguliers on bodily movements and with an incisive critique Denis Diderot on workers and their practices in the *Encyclopédie* Contributors are Carlo Ginzburg Alberto Guenzi Steven L Kaplan Edmund Leites and Roberto Scazzieri

Science on Stage in Early Modern Spain features essays by leading scholars in the fields of literary studies and the history of science exploring the relationship between technical innovations and theatrical events that incorporated scientific content

into dramatic productions Focusing on Spanish dramas between 1500 and 1700 through the birth and development of its playhouses and coliseums and the phenomenal success of its major writers this collection addresses a unique phenomenon through the most popular versatile and generous medium of the time The contributors tackle subjects and disciplines as diverse as alchemy optics astronomy acoustics geometry mechanics and mathematics to reveal how theatre could be used to deploy scientific knowledge While Science on Stage contributes to cultural and performance studies it also engages with issues of censorship the effect of the Spanish Inquisition on the circulation of ideas and the influence of the Eastern traditions in Spain

International Symposium on History of Machines and Mechanisms Proceedings HMM 2000

Marco Ceccarelli, 2013-11-11 The International Symposium on History of Machines and Mechanisms is a new initiative to promote explicitly researches and publications in the field of the History of TMM Theory of Machines and Mechanisms It was held at the University of Cassino Italy from 11 to 13 May 2000 The Symposium was devoted mainly to the technical aspects of historical developments and therefore it has been addressed mainly to the IFToMM Community In fact most the authors of the contributed papers are experts in TMM and related topics This has been indeed a challenge convincing technical experts to go further in depth into the background of their topics of expertise We have received a very positive response as can be seen by the fact that these Proceedings contain contributions by authors from all around the world We received about 50 papers and after review about 40 papers were accepted for both presentation and publishing in the Proceedings This means also that the History of TMM is of interest everywhere and indeed an in depth knowledge of the past can be of great help in working on the present and in shaping the future with new ideas I believe that a reader will take advantage of the papers in these Proceedings with further satisfaction and motivation for her or his work historical or not These papers cover the wide field of the History of Mechanical Engineering and particularly the History of TMM

Anxieties of Interiority and Dissection in Early Modern Spain Enrique Fernandez, 2015-01-01 *Anxieties of Interiority and Dissection in Early Modern Spain* brings the study of Europe s culture of dissection to the Iberian peninsula presenting a neglected episode in the development of the modern concept of the self Enrique Fernandez explores the ways in which sixteenth and seventeenth century anatomical research stimulated both a sense of interiority and a fear of that interior s exposure and punishment by the early modern state Examining works by Miguel de Cervantes Mar a de Zayas Fray Luis de Granada and Francisco de Quevedo Fernandez highlights the existence of narratives in which the author creates a surrogate self on paper then dissects it He argues that these texts share a fearful awareness of having a complex inner self in a country where one s interiority was under permanent threat of punitive exposure by the Inquisition or the state A sophisticated analysis of literary religious and medical practice in early modern Spain Fernandez s work will interest scholars working on questions of early modern science medicine and body politics
