Remote Sensing of Atmosphere and Ocean from Space: Models, Instruments and Techniques Frank S. Marzano, Guido Visconti, 2003-01-31 This book is a collection of the lectures held at the International Summer School ISSAOS 2000 in L'Aquila Italy given by invited lecturers coming from both Europe and the USA The goal of the book is to provide a broad panorama of spaceborne remote sensing techniques at both microwave and visible infrared bands and by both active and passive sensors for the retrieval of atmospheric and oceanic parameters A significant emphasis is given to the physical modeling background instrument potential and limitations inversion methods and applications Topics on international remote sensing programs and assimilation techniques into numerical weather forecast models are also touched The main purpose of the book is to offer to young scientists Ph D or equivalent students and to all who would like to have a broad spectrum understanding of spaceborne remote sensing capabilities introductory material to each remote sensing topic written by the most qualified experts in the field

Polar Remote Sensing Dan Lubin, Robert Massom, 2006-08-31 The polar regions perhaps more than any other places on Earth give the geophysical scientist a sense of exploration This sensibility is genuine for not only is high latitude fieldwork arduous with many locations seldom or never visited but there remains much fundamental knowledge yet to be discovered about how the polar regions interact with the global climate system The range of opportunities for new discovery becomes strikingly clear when we realize that the high latitudes are not one region but are really two vastly different worlds The high Arctic is a frozen ocean surrounded by land and is home to fragile ecosystems and unique modes of human habitation The Antarctic is a frozen continent without regular human habitation covered by ice sheets taller than many mountain ranges and surrounded by the Earth's most forbidding ocean When we consider global change as applied to the Arctic we discuss impacts to a region whose surface and lower atmospheric temperatures are near the triple point of water throughout much of the year The most consistent signatures of climate warming have occurred at northern high latitudes IPCC 2001 and the potential impacts of a few degrees increase in surface temperature include a

reduction in sea ice extent a positive feedback to climate warming due to lowering of surface albedo and changes to surface runoff that might affect the Arctic Ocean's salinity and circulation

Radiative Transfer in the Atmosphere and Ocean Knut Stamnes, Gary E. Thomas, Jakob J. Stamnes, 2017-07-13 This new and completely updated edition gives a detailed description of radiative transfer processes at a level accessible to advanced students The volume gives the reader a basic understanding of global warming and enhanced levels of harmful ultraviolet radiation caused by ozone depletion It teaches the basic physics of absorption scattering and emission processes in turbid media such as the atmosphere and ocean using simple semi-classical models The radiative transfer equation including multiple scattering is formulated and solved for several prototype problems using both simple approximate and accurate numerical methods In addition the reader has access to a powerful state of the art computational code for simulating radiative transfer processes in coupled atmosphere water systems including snow and ice This computational code can be regarded as a powerful educational aid but also as a research tool that can be applied to solve a variety of research problems in environmental sciences

Ocean-Atmosphere Interactions of Gases and Particles Peter S. Liss,Martin T. Johnson,2013-12-18 The oceans and atmosphere interact through various processes including the transfer of momentum heat gases and particles In this book leading international experts come together to provide a state of the art account of these exchanges and their role in the Earth system with particular focus on gases and particles Chapters in the book cover i the ocean atmosphere exchange of short lived trace gases ii mechanisms and models of interfacial exchange including transfer velocity parameterisations iii ocean atmosphere exchange of the greenhouse gases carbon dioxide methane and nitrous oxide iv ocean atmosphere exchange of particles and v current and future data collection and synthesis efforts The scope of the book extends to the biogeochemical responses to emitted deposited material and interactions and feedbacks in the wider Earth system context This work constitutes a highly detailed synthesis and reference of interest to higher level university students Masters PhD and researchers in ocean atmosphere interactions and related fields Earth system science marine atmospheric biogeochemistry climate Production of this book was supported and funded by the EU COST Action 735 and coordinated by the International SOLAS Surface Ocean Lower Atmosphere Study project office **From the Satellite to the Earth's Surface: Studies Relevant to NASA's Plankton, Aerosol, Cloud, Ocean Ecosystems (PACE) Mission** David Antoine,Oleg Dubovik,2020-03-04 Earth s atmosphere and oceans play individual and interconnected roles in regulating climate and the hydrological system supporting organisms and ecosystems and contributing to the well being of human communities and economies Recognizing the importance of these two geophysical fluids NASA designed the Plankton Aerosol Cloud and ocean Ecosystems PACE mission to bring cutting edge technology to space borne measurements of the atmosphere and ocean PACE will carry the Ocean Color Instrument OCI a radiometer with hyperspectral capability from the ultraviolet through the near infrared plus eight discreet shortwave infrared bands Thus OCI will measure the broadest solar

spectrum of any NASA instrument to date PACE's second instrument will be a Multi Angle Polarimeter MAP MAP will be NASA's first imaging polarimeter on board a comprehensive Earth science mission These instruments bring new capability to the science community but also new challenges Fundamentals such as basic radiative transfer models require review enhancements and benchmarking in order to meet the needs of the atmosphere-ocean communities in the PACE era Both OCI and MAP will bring opportunities to continue heritage climate data records of aerosols and clouds and to advance characterization of these atmospheric constituents with new macrophysical and microphysical parameters The ability to better characterize atmospheric constituents is a necessity to better separate ocean and atmosphere signals in order to fully realize the potential of PACE measurements for oceanic observations Atmospheric correction in the PACE era must address the expanded wavelength range and resolution of OCI images requiring new approaches that go beyond heritage algorithms This Research Topic encompasses fundamental radiative transfer studies with application to the atmosphere-ocean or coupled atmosphere-ocean system It includes remote sensing of aerosols clouds and trace gases over ocean or over land but with particular focus on algorithms that take advantage of OCI's new capabilities or multi-angle polarimetry The Research Topic embraces studies of atmospheric correction over ocean including addressing issues of aerosols cloud masking foam bubbles ice etc as well as ocean bio-optics and biogeochemical studies taking advantage of the PACE and polarization spectral capabilities

Optical Radiometry and Satellite Validation Agnieszka Bialek, David Doxaran, Vittorio Ernesto Brando, Clemence Goyens, Kevin Ruddick, Ana Ines Dogliotti, 2025-08-26 Strict quality control is essential to ensure that the satellite data products routinely used for environmental monitoring of water and land surfaces are fit for purpose A crucial step in this process is the validation of the water and land surface reflectances from which the final end user products are derived The topic of radiometric validation is growing rapidly in importance both because of the advent of operational satellite missions for routine environmental monitoring and because of the rapid expansion in the number of satellite missions including CubeSat constellations with limited cal/val resources This enhanced need for radiometric validation data covering a wide VIS-NIR-SWIR range e.g. 380-2400nm preferably with a hyperspectral resolution must be met by new techniques and hardware particularly ground-based automated radiometry
