Remote Sensing of Natural Resources Guangxing Wang,Qihao Weng,2013-07-12 Highlighting new technologies Remote Sensing of Natural Resources explores advanced remote sensing systems and algorithms for image processing enhancement feature extraction data fusion image classification image based modeling image based sampling design map accuracy assessment and quality control It also discusses their applications for evaluation of natural resources including sampling design land use and land cover classification natural landscape and ecosystem assessment forestry agriculture biomass and carbon cycle modeling wetland classification and dynamics monitoring and soils and minerals mapping The book combines review articles with case studies that demonstrate recent advances and developments of methods techniques and applications of remote sensing with each chapter on a specific area of natural resources Through a comprehensive examination of the wide range of applications of remote sensing technologies to natural resources the book provides insight into advanced remote sensing systems technologies and algorithms for researchers scientists engineers and decision makers

Environmental Sensing James K. Lein,2011-09-18 Remote sensing has witnessed a renaissance as new sensor systems data collection capabilities and image processing methodologies have expanded the technological capabilities of this science into new and important applications areas Perhaps nowhere has this trend been more evident than in the study of earth environments Within this broad application area remote sensing has proven to be an invaluable asset supporting timely data gathering at a range of synoptic scales facilitating the mapping of complex landscapes and promoting the analysis of environmental process Yet remote sensing s contribution to the study of human environmental interaction is scattered throughout a rich and diverse literature spanning the social and physical sciences which frustrates access to and the sharing of the knowledge gained through these recent advances and inhibits the operational use of these methods and techniques in day to day environmental practice a recognized gap that reduces the effectiveness of environmental management programs The objective of this book is to address this gap and provide the synthesis of method and application

that is currently missing in the environmental science re introducing remote sensing as an important decision support technology **Remote Sensing of Water Resources, Disasters, and Urban Studies** Ph.D., Prasad S.

Thenkabail,2015-10-02 This book is the most comprehensive documentation of the scientific and methodological advances that have taken place in understanding remote sensing data methods and applications over last 50 years In a very practical way it demonstrates the experience utility methods and models used in studying a wide array of water applications There are more than 100 leading global experts in the field contributing to this work [The Normalized Difference Vegetation Index](#)

Nathalie Pettorelli,2013-10-10 There has been a recent surge of interest in remote sensing and its use in ecology and conservation but this is the first book to focus explicitly on the NDVI Normalised Difference Vegetation Index a simple numerical indicator and powerful tool that can be used to assess spatio temporal changes in green vegetation The NDVI opens the possibility of addressing questions on scales inaccessible to ground based methods alone it is mostly freely available with global coverage over several decades This novel text provides an authoritative overview of the principles and possible applications of the NDVI in ecology environmental and wildlife management and conservation NDVI data can provide valuable information about temporal and spatial changes in vegetation distribution productivity and dynamics allowing monitoring of habitat degradation and fragmentation or assessment of the ecological effects of climatic disasters such as drought or fire The NDVI has also provided ecologists with a promising way to couple vegetation with animal distribution abundance movement survival and reproductive parameters Over the last few decades numerous studies have highlighted the potential key role of satellite data and the NDVI in macroecology plant ecology animal population dynamics environmental monitoring habitat selection and habitat use studies and paleoecology The chapters are organised around two sections the first detailing vegetation indices and the NDVI the principles behind the NDVI its correlation with climate the available NDVI datasets and the possible complications and errors associated with the use of this satellite based vegetation index The second section discusses the possible applications of the NDVI in ecology environmental and wildlife management and conservation **The SAGE Encyclopedia of Educational Technology** J.
