Risks And Decisions For Conservation And Environmental Management:

Risks and Decisions for Conservation and Environmental Management Mark A. Burgman, 2005 Risks and Decisions for Conservation and Environmental Management Mark Burgman, 2005-04-07 This book outlines how to conduct a complete environmental risk assessment The first part documents the psychology and philosophy of risk perception and assessment introducing a taxonomy of uncertainty and the importance of context It provides a critical examination of the use and abuse of expert judgement and goes on to outline approaches to hazard identification and subjective ranking that account for uncertainty and context The second part of the book describes technical tools that can assist risk assessments to be transparent and internally consistent These include interval arithmetic ecotoxicological methods logic trees and Monte Carlo simulation These methods have an established place in risk assessments in many disciplines and their strengths and weaknesses are explored The last part of the book outlines some new approaches including p bounds and information gap theory and describes how quantitative and subjective assessments can be used to make transparent decisions

Application of Threshold Concepts in Natural Resource Decision Making Glenn R. Guntenspergen, 2014-02-07 Natural resource managers face a complex decision making environment characterized by the potential occurrence of rapid and abrupt ecological change These abrupt changes are poorly accommodated by traditional natural resource planning and decision making processes As recognition of threshold processes has increased contemporary models of ecological systems have been modified to better represent a broader range of ecological system dynamics Key conceptual advances associated with the ideas of non linear responses the existence of multiple ecological stable states and critical thresholds are more likely the rule than the exception in ecological systems Once an ecological threshold is crossed the ecosystem in question is not likely to return to its previous state There are many examples and a general consensus that climatic disruptions will drive now stable systems across ecological thresholds This book provides professional resource managers with a broad general decision framework that illustrates the utility of including ecological threshold concepts in natural resource management It gives an entry into the literature in this rapidly evolving concept with descriptions and discussion of the promising statistical approaches for threshold detection and demonstrations of the utility of the threshold framework via a series of case studies

Australia's Megafires Libby Rumpff, Sarah M. Legge, Stephen van Leeuwen, Brendan A. Wintle, John C.Z. Woinarski, 2023-02-01 The Australian wildfires of 2019 20 Black Summer were devastating and unprecedented These megafires burnt more than 10 million hectares mostly of forests in southern and eastern Australia Many of the fires were uncontrollable These megafires affected many of Australia's most important conservation areas and severely impacted threatened species and ecological communities They were a consequence of climate change and offered a glimpse of how this is likely to continue to affect our future Australia's Megafires includes contributions by more than 200 researchers and managers with direct involvement in the management and conservation of the biodiversity affected by the Black Summer

wildfires It provides a comprehensive review of the impacts of these fires on all components of biodiversity and on Indigenous cultural values These fires also triggered an extraordinary and highly collaborative response by governments NGOs Indigenous groups scientists landholders and others seeking to recover the fire affected species and environments to restore Country This book documents that response It draws lessons that should be heeded to sustain that recovery and to be better prepared for the inevitable future comparable catastrophes Such lessons are of global relevance for wildfires increasingly threaten biodiversity and livelihoods across the globe

Biodiversity Monitoring in Australia David Lindenmayer, Philip Gibbons, 2012 Ecological and biodiversity based monitoring has been marked by an appalling lack of effectiveness and lack of success in Australia for more than 40 years despite the billions of dollars that are invested in biodiversity conservation annually What can be done to rectify this situation This book tackles many aspects of the problem of biodiversity monitoring It arose from a major workshop held at The Australian National University in February 2011 attended by leaders in the science policy making and management arenas of biodiversity conservation Chapter contributors examine what has led to successful monitoring the key problems with biodiversity monitoring and practical solutions to those problems By capturing critical insights into successes failures and solutions the authors provide high level guidance for important initiatives such as the National Biodiversity Strategy Ultimately the authors hope to considerably improve the quality and effectiveness of biodiversity monitoring in Australia and to arrest the decline of biodiversity

Risk analysis in aquaculture Lind, C.E., Dana, G.V., Perera, R.P., Phillips, M.J., 2015-04-07 This publication is based on materials covered and outputs generated during the Workshop on Risk Assessment Methodologies and Tools for Aquaculture in Sub Saharan Africa which was jointly held by WorldFish and FAO in Siavonga Zambia on 28 June 2 July 2010 The workshop was delivered as a training exercise to 17 participants from seven sub Saharan countries and was designed to highlight current methodologies and tools available for environmental risk analysis in aquaculture development A key focus of the workshop was to encourage participants to consider hypothetical but realistic scenarios and to discuss issues relevant to evaluating the environmental risks of a given activity or scenario This publication presents selected scenarios from the workshop and the outcomes of the deliberative process as developed by the participants This publication is factual but not comprehensive therefore any statements or estimations of risk do not represent the actual risks arising from the described scenario It is intended to serve as an easily readable introduction to risk analysis highlighting worked examples that will provide guidance on how a risk analysis may be approached in a similar situation

Effective Risk Communication Joseph Arvai, Louie Rivers III, 2013-10-30 There are two questions often asked of risk communication what has been learned from past work and what is needed to push the field forward Drawing on the experience of leading risk researchers and practitioners Effective Risk Communication focuses on answering these questions The book draws together new examples of research and practice from contexts as diverse as energy generation human health nuclear waste climate change food choice and social media This book treats risk

communication as much more than the interchange of risk information between experts and non experts rather it aims to emphasise the diversity in viewpoints and practices In each specially commissioned chapter the authors reflect on the theoretical and applied underpinnings of their best projects and comment on how their approach could be used effectively by others Building upon each other the chapters will provoke new discussion and action around a discipline which many feel is neither meeting important needs in practice nor living up to its potential in research Through a more careful examination of the work already done in risk communication the book will help develop better more reflective practice for the future
