Scalable And Reliable Continuous Media Streaming Systems:

Scalable Continuous Media Streaming Systems Jack Lee, 2005-11-01 Continuous media streaming systems will shape the future of information infrastructure The challenge is to design systems and networks capable of supporting millions of concurrent users Key to this is the integration of fault tolerant mechanisms to prevent individual component failures from disrupting systems operations These are just some of the hurdles that need to be overcome before large scale continuous media services such as video on demand can be deployed with maximum efficiency The author places the subject in context drawing together findings from the past decade of research whilst examining the technology's present status and its future potential The approach adopted is comprehensive covering topics notably the scalability and fault tolerance issues that previously have not been treated in depth Provides an accessible introduction to the technology presenting the basic principles for media streaming system design focusing on the need for the correct and timely delivery of data Explores the use of parallel server architectures to tackle the two key challenges of scalability and fault tolerance Investigates the use of network multicast streaming algorithms to further increase the scalability of very large scale media streaming systems Illustrates all findings using real world examples and case studies gleaned from cutting edge worldwide research Combining theory and practice this book will appeal to industry specialists working in content distribution in general and continuous media streaming in particular The introductory materials and basic building blocks complemented by amply illustrated more advanced coverage provide essential reading for senior undergraduates postgraduates and researchers in these fields

Tang, Jianliang Xu, Samuel T. Chanson, 2006-01-17 The concept of content delivery also known as content distribution is becoming increasingly important due to rapidly growing demands for efficient distribution and fast access of information in the Internet Content delivery is very broad and comprehensive in that the contents for distribution cover a wide range of types with significantly different characteristics and performance concerns including HTML documents images multimedia streams database tables and dynamically generated contents Moreover to facilitate ubiquitous information access the network architectures and hardware devices also vary widely They range from broadband wired fixed networks to bandwidth constrained wireless mobile networks and from powerful workstations PCs to personal digital assistants PDAs and cellular

phones with limited processing and display capabilities All these levels of diversity are introducing numerous challenges on content delivery technologies It is desirable to deliver contents in their best quality based on the nature of the contents network connections and client devices This book aims at providing a snapshot of the state of the art research and development activities on web content delivery and laying the foundations for future web applications The book focuses on four main areas 1 web content delivery 2 dynamic web content 3 streaming media delivery and 4 ubiquitous web access It consists of 17 chapters written by leading experts in the field The book is designed for a professional audience including academic researchers and industrial practitioners who are interested in the most recent research and development activities on web content delivery

Interactive Distributed Multimedia Systems and Telecommunication Services Michel Diaz,Philippe Owezarski,Patrick Senac,2007-07-23 The 1999 International Workshop on Interactive Distributed Multimedia Systems and Telecommunication Services IDMS in Toulouse is the sixth in a series that started in 1992 The previous workshops were held in Stuttgart in 1992 Hamburg in 1994 Berlin in 1996 Darmstadt in 1997 and Oslo in 1998 The area of interest of IDMS ranges from basic system technologies such as networking and operating system support to all kinds of teleservices and distributed multimedia applications Technical solutions for telecommunications and distributed multimedia systems are merging and quality of service QoS will play a key role in both areas However the range from basic system technologies to distributed multimedia applications and teleservices is still very broad and we have to understand the implications of multimedia applications and their requirements for middleware and networks We are challenged to develop new and more fitting solutions for all distributed multimedia systems and telecommunication services to meet the requirements of the future information society
