## Scenarios In Lifecycle Assessment:

**Scenarios in Life-cycle Assessment** Bo P. Weidema, Thomas Ekvall, 2004 *Life Cycle Assessment (LCA) of Environmental and Energy Systems* Fabrizio Passarini, Luca Ciacchi, 2021-04-01 The transition towards renewable energy sources and green technologies for energy generation and storage is expected to mitigate the climate emergency in the coming years. However, in many cases, this progress has been hampered by our dependency on critical materials or other resources that are often processed at high environmental burdens. Yet many studies have shown that environmental and energy issues are strictly interconnected and require a comprehensive understanding of resource management strategies and their implications. Life cycle assessment (LCA) is among the most inclusive analytical techniques to analyze sustainability benefits and trade-offs within complex systems, and in this Special Issue, it is applied to assess the mutual influences of environmental and energy dimensions. The selection of original articles, reviews, and case studies addressed covers some of the main driving applications for energy requirements and greenhouse gas emissions, including power generation, bioenergy, biorefinery, building, and transportation. An insightful perspective on the current topics and technologies and emerging research needs is provided. Alone or in combination with integrative methodologies, LCA can be of pivotal importance and constitute the scientific foundation on which a full system understanding can be reached.

**Life Cycle Assessment** Michael Z. Hauschild, Ralph K. Rosenbaum, Stig Irving Olsen, 2017-09-01 This book is a uniquely pedagogical while still comprehensive state-of-the-art description of LCA methodology and its broad range of applications. The five parts of the book conveniently provide: I the history and context of Life Cycle Assessment (LCA) with its central role as quantitative and scientifically based tool supporting society's transition towards a sustainable economy; II all there is to know about LCA methodology illustrated by a red thread example which evolves as the reader advances; III a wealth of information on a broad range of LCA applications with dedicated chapters on policy development, prospective LCA, life cycle management, waste, energy, construction and building, nanotechnology, agri-food, transport, and LCA-related concepts such as footprinting, ecolabelling, design for environment, and cradle to cradle; IV a cookbook giving the reader recipes for all the concrete actions needed to perform an LCA; V an appendix with an LCA report template, a full example LCA report serving as inspiration for students who write their first LCA report, and a more detailed overview of existing LCIA methods and their similarities and differences.

Life-Cycle Assessment of Biorefineries Edgard Gnansounou, Ashok Pandey, 2016-12-20 Life Cycle Assessment of Biorefineries the sixth and last book in the series on biomass biorefineries discusses the unprecedented growth and development in the emerging concept of a global bio based economy in which biomass based biorefineries have attained center stage for the production of fuels and chemicals It is envisaged that by 2020 a majority of chemicals currently being produced through a chemical route will be produced via a bio based route Agro industrial residues municipal solid wastes and forestry wastes have been considered as the most significant feedstocks for such bio refineries However for the techno economic success of such biorefineries it is of

prime and utmost importance to understand their lifecycle assessment for various aspects Provides state of art information on the basics and fundamental principles of LCA for biorefineries Contains key features for the education and understanding of integrated biorefineries Presents models that are used to cope with land use changes and their effects on biorefineries Includes relevant case studies that illustrate main points      Life-cycle Assessment in Building and Construction Shpresa Kotaji, Agnes Schuurmans, Suzy Edwards, 2003      **Environmental Life Cycle Assessment of Goods and Services** Chris T. Hendrickson, Lester B. Lave, H. Scott Matthews, 2010-09-30 Environmental life cycle assessment is often thought of as cradle to grave and therefore as the most complete accounting of the environmental costs and benefits of a product or service However as anyone who has done an environmental life cycle assessment knows existing tools have many problems data is difficult to assemble and life cycle studies take months of effort A truly comprehensive analysis is prohibitive so analysts are often forced to simply ignore many facets of life cycle impacts But the focus on one aspect of a product or service can result in misleading indications if that aspect is benign while other aspects pollute or are otherwise unsustainable This book summarizes the EIO LCA method explains its use in relation to other life cycle assessment models and provides sample applications and extensions of the model into novel areas A final chapter explains the free easy to use software tool available on a companion website [www.eiolca.net](http://www.eiolca.net) The software tool provides a wealth of data summarizing the current U S economy in 500 sectors with information on energy and materials use pollution and greenhouse gas discharges and other attributes like associated occupational deaths and injuries The joint project of twelve faculty members and over 20 students working together over the past ten years at the Green Design Institute of Carnegie Mellon University the EIO LCA has been applied to a wide range of products and services It will prove useful for research industry and in economics engineering or interdisciplinary classes in green design      *Life Cycle Assessment (LCA) of Light-Weight Eco-composites* Miao Guo, 2013-01-11 Miao Guo s PhD thesis provides scientific insights into the environmental issues related to biocomposites based on starch polyvinyl alcohol PVOH blends The author contributes significantly to the methodological issues underlying the Life Cycle Assessment LCA modelling approach As well as presenting complete LCA inventories using primary data from a variety of sources Guo develops a new modelling approach incorporating the process oriented biogeochemistry model Denitrification Decomposition DNDC into site specific LCA studies to simulate carbon and nitrogen dynamics in the wheat agro ecosystem This thesis addresses important LCA data quality issues by using comprehensive sensitivity and uncertainty analyses and has resulted in a large number of publications in internationally renowned journals      *Life Cycle & Technoeconomic Modeling* Antonio Colmenar Santos, David Borge Diez, Enrique Rosales Asensio, 2020-12-02 This book aims to perform an impartial analysis to evaluate the implications of the environmental costs and impacts of a wide range of technologies and energy strategies This information is intended to be used to support decision making by groups including researchers industry regulators and policy makers Life cycle assessment LCA and technoeconomic analysis can be applied to

a wide variety of technologies and energy strategies both established and emerging LCA is a method used to evaluate the possible environmental impacts of a product material process or activity It assesses the environmental impact throughout the life cycle of a system from the acquisition of materials to the manufacture use and final disposal of a product

Technoeconomic analysis refers to cost evaluations including production cost and life cycle cost Often in order to carry out technoeconomic analysis researchers are required to obtain data on the performance of new technologies that operate on a very small scale in order to subsequently design configurations on a commercial scale and estimate the costs of such expansions The results of the developed models help identify possible market applications and provide an estimate of long term impacts These methods together with other forms of decision analysis are very useful in the development and improvement of energy objectives since they will serve to compare different decisions evaluating their political and economic feasibility and providing guidance on potential financial and technological risks

**Handbook of Life Cycle Assessment (LCA) of Textiles and Clothing** Subramanian Senthilkannan Muthu, 2015-07-25 Life cycle assessment LCA is used to evaluate the environmental impacts of textile products from raw material extraction through fibre processing textile manufacture distribution and use to disposal or recycling LCA is an important tool for the research and development process product and process design and labelling of textiles and clothing Handbook of Life Cycle Assessment LCA of Textiles and Clothing systematically covers the LCA process with comprehensive examples and case studies Part one of the book covers key indicators and processes in LCA from carbon and ecological footprints to disposal re use and recycling Part two then discusses a broad range of LCA applications in the textiles and clothing industry Covers the LCA process and its key indicators including carbon and ecological footprints disposal re use and recycling Examines the key developments of LCA in the textile and clothing industries Provides a wide range of case studies and examples of LCA applications in the textile and clothing industries
