The No-nonsense Guide to Research Support and Scholarly Communication Claire Sewell, 2020-01-07 This accessible and highly practical book provides an introductory guide to the world of research support in the academic library

Academic libraries have seen huge changes in recent years thanks to the increasing availability of information online but they are now undergoing another shift. As libraries move away from providing access to existing information and towards helping users create new knowledge, there is an opportunity for them to develop new services for the research community. To do this successfully, libraries need to have a knowledgeable workforce who are equipped to provide the support that researchers need. Information professionals are increasingly being asked to advise their users on issues such as open access and research data management but are often doing so with little or no formal preparation. Outlining the reasons why library staff need to develop a knowledge of research support and guiding them through the key information on each topic, *The No Nonsense Guide to Research Support and Scholarly Communication* provides an ideal primer for those who seek to work in this area or those who have acquired these responsibilities as part of a wider role. The practical nature of the book means readers can dip into it or read it from cover to cover as needed. It includes practical checklists of knowledge and skills, international case studies by practitioners from around the globe, end of chapter references, how to sections, activities, and links to freely available online training materials. The book covers scholarly communication, open research, and the research lifecycle, research data management, open access, disseminating research metrics, and measuring impact, including the Journal Impact Factor, H Index, and Altmetrics. Career paths in research support, why and how library staff at all levels can get involved in the process of doing research and sharing their outputs, are also covered. The book will be essential reading for academic librarians who have had research support duties added to their role with little or no formal training, or those who have taken on a newly created role and are unsure of how best to use their existing skills or develop new ones suitable for a role in research support. The book will also be of interest to public librarians who may be dealing with supporting their own research communities and those who are considering taking on a career in this growing area but are unsure where to turn for guidance, including students studying for postgraduate library qualifications and those who have undertaken qualifications in publishing.

[Dictionary of Bibliometrics](#) Virgil P Diodato, Peter Gellatly, 2013-01-11. Everything you need to know about Bibliometrics in a convenient easy to use mini encyclopedia of terms and phrases. Bibliometrics, the application of mathematical and statistical techniques to the study of publishing and professional communication, is a helpful science to master in many fields. The Dictionary of Bibliometrics contains 225 non-technical definitions of key terms and phrases that will aid all who deal with this science. Each entry is briefly defined in everyday language with simple numerical examples and is followed by sample references that direct the reader to more detailed information about the entry. This is the only source with a substantial collection of bibliometric terms located in one comprehensive easy to use book. Librarians who use bibliometrics to evaluate their collections, information scientists who study the theoretical aspects of bibliometrics, and subject specialists who use bibliometrics to study communication in their respective fields will save time by finding hundreds of definitions in this one of a kind volume. Some of the topics covered in the Dictionary of Bibliometrics include descriptions and examples of Bradford's

law Lotka's law and Zipf's law various aspects of citation analysis application of bibliometrics to the study of communication in the physical and natural sciences reports of journal analyses accounts of several ways to study the obsolescence or disuse of articles in a given subject field This tool will serve anyone working or interested in the fields of publishing and professional communication Included in the text are suggested sources of further information and an index of personal names The Dictionary of Bibliometrics is a valuable handy resource that you'll refer to again and again Academic Research in Business and the Social Sciences George P. Cassidy R. Sugimoto, 2016-02-22 Scientometrics have become an essential element in the practice and evaluation of science and research including both the evaluation of individuals and national assessment exercises Yet researchers and practitioners in this field have lacked clear theories to guide their work As early as 1981 then doctoral student Blaise Cronin published The need for a theory of citing a call to arms for the fledgling scientometric community to produce foundational theories upon which the work of the field could be based More than three decades later the time has come to reach out the field again and ask how they have responded to this call This book compiles the foundational theories that guide informetrics and scholarly communication research It is a much needed compilation by leading scholars in the field that gathers together the theories that guide our understanding of authorship citing and impact

Altmetrics for Information Professionals Kim Johan Holmberg, 2015-09-03 The goal of any research assessment is to evaluate the value or quality of the research in comparison to other research As quality is highly subjective and difficult to measure citations are used as a proxy Citations are an important part of scholarly communication and a significant component of research evaluation with the assumption being that highly cited work has influenced the work of many other researchers and hence it is more valuable Recently we have seen new online data sources being researched for this purpose and disruptive ideas with the power to change research assessment and perhaps even science as a whole have been born Altmetrics is the new research area that investigates the potential of these new data source as indicators of the impact that research has made on the scientific community and beyond and thus possibly also as indicators of the societal impact of research This book will present some of these new data sources findings from earlier altmetrics research and the disruptive ideas that may radically change scholarly communication Presents some of the key ideas and innovations in earlier research that have been driving the evolution from bibliometrics to webometrics and with the advent of social media to altmetrics

Discusses the shortcomings and pitfalls of bibliometrics in research evaluation and the potential of altmetrics to overcome some of these shortcomings Presents some of the most important data sources of altmetrics the aggregators and the different stakeholders Reviews current research about altmetrics and discusses possible future trends Presents a way to measure and aggregate altmetrics according to the level of impact or type of impact they represent International Forum on Information and Documentation ,1998 Advancing Technologies and Intelligence in Healthcare and Clinical Environments Breakthroughs Tan, Joseph,2012-06-30 Clinical decision support systems medical applications and electronic health records each help to ensure the provision of efficient accurate healthcare services thereby providing patients with a better experience and overall reducing health care costs Advancing Technologies and Intelligence in Healthcare and Clinical Environments Breakthroughs is a prime resource for both academic researchers and practitioners looking to advance their knowledge of the interdisciplinary areas of healthcare information technology and management research This book addresses innovative concepts and critical issues in the emerging field of health information systems and informatics with an emphasis on sustainable computer information systems ensuring healthcare efficiency and denoising MRI and ECG outputs
