**E-Commerce and V-Business** Stuart Barnes,2007-08-15 E-commerce and Virtual Business examines the impact of the Internet and associated technologies on two related aspects of business: electronic commerce and virtual organization. Using a combination of recent theory and empirical evidence it demonstrates how forward-thinking organizations are reaping considerable advantages from exciting new business models in these areas. Such models require radical rethinking of many aspects of traditional business. The book covers many of the critical and contemporary issues stemming from these important new developments. The collected papers in this book illustrate the wide variety of business opportunities afforded by e-commerce and virtual business. They describe and discuss the important issues that follow in the wake of an organization deciding to pursue consumers electronically and organize its operations virtually. It brings a good balance of theory and practical issues from different perspectives from different parts of the globe.

**Droit du logiciel** Pierre de Oliveira ,2012 Aujourd'hui la théorie du droit du logiciel est conditionnée par une vision monolithique et immatérielle du logiciel. Cette religion de l'immatériel est en totale contradiction avec la pratique et ne permet pas l'émersion d'une véritable approche objective et scientifique de la qualification juridique du logiciel. Cette erreur de qualification juridique de la chose logicielle engendre des effets pervers dans l'économie du logiciel. Cet ouvrage met en évidence que le statut juridique actuel du logiciel n'est pas satisfaisant au regard des nombreuses difficultés juridiques rencontrées dans la pratique. Pierre de Oliveira propose une nouvelle approche qui présente de nombreux

avantages la théorie matrialiste Il en décrit les principales conséquences juridiques plus respectueuses de la réalité physique et technique de l'objet logiciel en proposant une nouvelle lecture du droit relatif au logiciel Il propose une meilleure lisibilité et qualification des contrats relatifs au logiciel qui améliore considérablement la sécurité juridique des acteurs Cela autorise un accès amélioré aux techniques de financement tels que le crédit ou le crédit bail et une valorisation patrimoniale plus sûre au sein des entreprises Utile pour les juristes comme pour tous les acteurs du logiciel concepteurs responsables d'entreprises utilisateurs etc cet ouvrage apporte un clairage essentiel sur le système économique juridique du logiciel les droits des biens et des contrats de logiciel le contrat de vente l'œuvre logicielle la propriété et l'exploitation de l'exemplaire logiciel le code de la propriété intellectuelle etc Il permet de pallier de nombreuses imperfections en matière de logiciel et présente une solution qui ne nécessite aucun changement législatif Sa force réside dans le fait que l'auteur ancre son raisonnement dans le réel alliant innovation rationalisme et ambition

**Intellectual Property Management** Klaus Jennewein, 2006-03-30 Innovation is a source of competitive advantage In other words firms may leverage innovation to generate rents at least temporarily And this is intended to be a self-sustained business model part of the rent extracted from the market may be re-invested into new technological developments which in turn permit additional innovations thus regenerating the sources of rents This is the positive loop of innovation In this sense business would be a permanent hunt for innovations in search of rents Yet innovations need to be protected if firms want to benefit from rents over long periods of time However the strategic management literature tends to suggest that patents are a weak protection against aggressive imitators Secrecy may help but we also know that technology ends up leaking in most cases Speed in new developments to cut time to market may be another way of protecting the technological advance of the firm But again this may not be enough as start-ups may out-compete the established firm in the race for innovation This is where Dr Klaus Jennewein's key idea comes into the picture The core of his thesis is that brand equity may be combined with technological protections such as patents to build a multi-layer complex intricate shield to protect the sources of rents against competitors and imitators
