Quarrying in Antiquity John Bryan Ward-Perkins,1972 A wide survey over four millennia is possible for quarrying tools and techniques because of their simplicity and long lived traditions The chief contribution of the Romans was their organisation of the stone trade by mass production standardisation and long distance transport Indeed in post Roman Europe especially in Britain it was the excellence of Roman building stone which allowed so much subsequent quarrying in the buildings themselves One exception in Saxon times was the quarry for Bradford on Avon's church With the 12th century spurt in church building activity however natural stone quarries once more became common and distribution methods familiar to the Roman world re-emerged **Extracting Stone** Anne S. Dowd,Mary Beth D. Trubitt,2024-04-04 A comprehensive view of quarrying activities from three key regions in North America This exciting new addition to the the American Landscapes series provides an in depth account of how flintknappers obtained and used stone based on archaeological geological landscape and anthropological data Featuring case studies from three key regions in North America this book gives readers a comprehensive view of quarrying activities ranging from extracting the raw material to creating finished stone tools Quarry landscapes were some of the first large scale land modification efforts among early peoples in the New World The chronological time periods covered by quarrying activities show that most intensive use took place during parts of the Archaic and Woodland periods or between roughly 4000 1000 years ago when denser populations existed but use began as early as the Paleoindian Period about 13 000 9000 years ago and ended in the Historic or

Protohistoric periods when colonists and Native Americans mined chert for gunflints and sharpening stones or abrasives From the procurement systems approach common in the 1980s and 1990s archaeologists can now employ a landscape approach to quarry studies in tandem with Geographic Information Systems GIS computer mapping and digital analysis Light and RADAR LiDAR airborne laser scanning for recording topography or high resolution satellite imagery Authors Dowd and Trubitt show how sites functioned in a broad landscape context which site locations or raw material types were preferred and why what cultures were responsible for innovative or intensive quarry resource extraction as well as how land use changed over time Besides discussions of the way that industrialists used natural resources to change their technology by means of manufacture trade and exchange examples are given of heritage sites that people can visit in the United States and Canada
