**Low-dimensional Nanoscale Systems On Discrete Spaces** Erhardt Papp, Codrutza Micu, 2007-04-24 The area of low dimensional quantum systems on discrete spaces is a rapidly growing research field lying at the interface between quantum theoretical developments like discrete and q difference equations and tight binding superlattice models in solid state physics Systems on discrete spaces are promising candidates for applications in several areas Indeed the dynamic localization of electrons on the 1D lattice under the influence of an external electric field serves to describe time dependent transport in quantum wires linear optical absorption spectra and the generation of higher harmonics Odd even parity effects and the flux dependent oscillations of total persistent currents in discretized rings can also be invoked Technological developments are then provided by conductance calculations characterizing 1D conductors junctions between rings and leads or rings and dots and by quantum LC circuits Accordingly the issues presented in this book are important starting points for the design of novel nanodevices

**Difference Equations And Discrete Dynamical Systems - Proceedings Of The 9th International Conference** Linda Allen, Bernd Aulbach, Saber N Elaydi, Robert Sacker, 2005-10-07

Difference Equations or Discrete Dynamical Systems is a diverse field which impacts almost every branch of pure and applied mathematics. Not surprisingly the techniques that are developed vary just as broadly. No more so is this variety reflected than at the prestigious annual International Conference on Difference Equations and Applications. Organized under the auspices of the International Society of Difference Equations the Conferences have an international attendance and a wide coverage of topics. The contributions from the conference collected in this volume invite the mathematical community to see a variety of problems and applications with one ingredient in common: the Discrete Dynamical System. Readers may also keep abreast of the many novel techniques and developments in the field. The special emphasis of the meeting was on mathematical biology and accordingly about half of the articles are in the related areas of mathematical ecology and mathematical medicine.
