Refractive Nonlinearity Of Wide Band Semiconductors And Applications:

Refractive Nonlinearity of Wide-band Semiconductors and Applications A. A. Borshch, Mikhail Semenovich Brodin, V. Volkov, 1990 This series consists of self contained tracts on topics pertinent to the subject of laser technology starting with a basic introduction and going on to explore the most advanced results Optical Parametric Generation and Amplification Jing-Yuan Zhang, 2019-01-22 This volume considers optical parametric generation and amplification OPG OPA as a means for producing a tunable optical parametric device It reviews the OPA OPG systems using various crystals pumped by lasers at various frequencies with pulse duration ranging from picoseconds to femtoseconds Part two covers the theoretical background for design of an OPA OPG system using two newly discovered nonlinear crystals Experimental design considerations are discussed in section three including the section of nonlinear crystals pumping sources and optical configurations In section four the experimental results obtained are compared with the theoretical calculations **Lasers** Charles Blain, 2002 Developments in lasers continue to enable progress in many areas such as eye surgery the recording industry and dozens of others This book presents citations from the book literature for the last 25 years and groups them for ease of access which is also provided by subject author and titles indexes *Laser Plasma Theory and Simulation* Hector A. Baldis, 2020-05-05 This book covers recent developments in laser plasma physics such as absorption instability energy transport and radiation from the standpoint of theory and simulation for plasma corona showing how the elements for the high density compression depend on the interaction physics and heat transport *Principles and Applications of Nonlinear Optical Materials* R.W. Munn, C.N. Ironside, 2012-12-06 Nonlinear optics is a topic of much current interest that exhibits a great diversity Some publications on the subject are clearly physics while others reveal an engineering bias some appear to be accessible to the chemist while others may appeal to biological understanding Yet all purport to be non linear optics so where is the underlying unity The answer is that the unity lies in the phenomena and the devices that exploit them while the diversity lies in the materials used to express the phenomena This book is an attempt to show this unity in diversity by bringing together contributions covering an unusually wide range of materials preceded by accounts of the main phenomena and important devices Because of the diversity individual materials are treated in separate chapters by different expert authors while as editors we have shouldered the task of providing the unifying initial chapters Most main classes of nonlinear optical solids are treated semiconductors glasses ferroelectrics molecular crystals polymers and Langmuir Blodgett films However liquid crystals are not covered Each class of material is enough for a monograph in itself and this book is designed to be an introduction suitable for graduate students and those in industry entering the area of nonlinear optics It is also suitable in parts for final year undergraduates on project work It aims to provide a bridge between traditional fields of expertise and the broader field of nonlinear optics *Optical Oscillators with Degenerate Four-wave Mixing (dynamic Grating Lasers)* Sergei Georgievich Odulov, Marat Samuilovich Soskin, 1991 *Electrooptics* Jose Manuel Cabrera, Fernando

Agullo-Rueda,2012-12-02 This comprehensive text provides an understanding of the physical phenomenon behind electrooptics It describes in detail modern electrooptic materials and operative physical mechanisms and devotes a full chapter to the new materials engineering that is contributing to the development of low dimensional systems The book also reviews device applications in both bulk and waveguide technologies Provides extensive coverage in a self contained format and consequently useful to beginners as well as specialists Includes the most current information Features many tables and illustrations to facilitate understanding Photobiology Of Low-Power Laser T. I. Karu,2020-08-26 This book provides information on current and promising developments in lasers It is useful to researchers looking for concise information about a particular endeavor and engineers who would like to understand the basic facts of the laser applications in their respective occupations *Compound Semiconductors 1996, Proceedings of the Twenty-Third INT Symposium on Compound Semiconductors held in St Petersburg, Russia, 23-27 September 1996* Shur,2020-10-28 Providing a comprehensive overview of developments to both the academic and industrial communities Compound Semiconductors 1996 covers all types of compound semiconducting materials and devices The book includes results on blue and green lasers heterostructure devices nanoelectronics and novel wide band gap semiconductors With invited review papers and research results in current topics of interest this volume is part of a well known series of conferences for the dissemination of research results in the field

Atom Optics with Laser Light S. Letokhov,1995-03-01 This book deals specifically with the manipulation of atoms by laser light describing the focusing channeling and reflection of atoms by laser fields It also describes the potential fields required to cause the phase change of the wave function necessary for the atomic interactions to occur
