Winter, Rudolf L. Sizmann, Lorin L. Vant-Hull, 2012-12-06 In the introductory and concluding chapters this book strive to satisfy the needs of the interested lay reader by addressing the potential advantages and costs of solar power plants For the interested student scientist or technically oriented lay person the physical principles of insolation its variability concentration and most efficient use are developed in some detail Finally experimental and theoretical developments in the recently created field of solar driven chemistry via thermal quantum or electrical excitation are described The contributions in this book are written by leading solar scientists and engineering experts whose extensive background and experience in solar energy lend authenticity and completeness to the book Design aspects of and results from large experimental and demonstration plants are described by individuals who were directly involved in the design and testing of many of these plants Consideration of the viability and future economics of large scale solar power generation provides an outlook on the energy contributions which can be expected from an optional future supply of abundant and renewable energy having little impact on the environment This provides the rationale for the continued commitment to the development of solar power technologies by researchers engineers and industry The eventual depletion of or future political attacks on our energy supply will have less serious impact once this renewable option is in place

Willeke Palz, 2012-12-06 Since 1977 the U S National Photovoltaic Program has actively supported the design construction and operation of a variety of photovoltaic power system applications classed as Intermediate size systems and ranging in size from 15 kW to 1000 kW To date fourteen systems have been built and generally are operating as planned One 100kW application project was terminated before the completion of the project due to exhaustion of funds and too ambitious of a project The fourteen operating systems represented a total installed peak generating capacity of 1 164 kW and have delivered nearly 2 000 MWH of energy Under the U S National Program two additional intermediate size photovoltaic power plants are under construction and are expected to become operational during 1984 These two plants represent a total of 1 300 kW of peak generating capacity and should deliver over 1800 MWH of energy per year In addition the U S Photovoltaic Program has committed most of the

funding to support the design procurement and construction of a 1000 kW photovoltaic plant This plant will be constructed and installed during the 1984-1985 period Current U S Program Plans do not anticipate funding any further Intermediate size photovoltaic power plants In parallel with the government program the private sector has begun building and installing Intermediate and larger size photovoltaic power systems Over the past 21 months the private sector has installed four Intermediate size PV systems in the U S
