The Trickster Brain David Williams, 2012-05-29 Until recently scientific and literary cultures have existed side by side but most often in parallel universes without connection. *The Trickster Brain: Neuroscience, Evolution, and Nature* by David Williams addresses the premise that humans are a biological species stemming from the long process of evolution and that we do exhibit a universal human nature given to us through our genes. From this perspective literature is shown to be a product of our biological selves. By exploring central ideas in neuroscience evolutionary biology linguistics music philosophy ethics religion and history Williams shows that it is the circuitry of the brain's hard wired dispositions that continually create similar tales around the world archetypal stories reflecting ancient tensions that arose from our evolutionary past and the very construction of our brains. The book asserts that to truly understand literature one must look at the biological creature creating it. By using the lens of science to examine literature we can see how stories reveal universal aspects of the biological mind. The Trickster character is particularly instructive as an archetypal character who embodies a raft of human traits and concerns. For Trickster is often god devil musical sexual silver tongued animal and human at once treading upon the moral dictates of culture. Williams brings together science and the humanities demonstrating a critical way of approaching literature that incorporates scientific thought.
